**Artisanal Small-Scale Gold Mining** Katherine von Stackelberg, Pamela R. D. Williams, Ernesto Sánchez-Triana, 2022-06-13 This framework document provides a pragmatic approach for designing representative studies and developing uniform sampling guidelines to support estimates of morbidity that are explicitly linked to exposure to land-based contaminants from small-scale artisanal gold mining activities. A primary goal is to support environmental burden of disease evaluations, which attempt to attribute health outcomes to specific sources of pollution. The guidelines provide recommendations on the most appropriate and cost-effective sampling and analysis methods to ensure the collection of representative population-level data, sample size recommendations for each contaminant and environmental media, biological sampling data, household survey data, and health outcome data. This framework focuses on small-scale artisanal gold mining (ASGM) activities that are known to use and generate mercury (Hg) as well as other metals, such as arsenic (As) and lead (Pb), depending on the specific ores being mined. A particular concern with Hg is the conversion to methylmercury (MeHg) in aquatic environments, leading to bioaccumulation and biomagnification in fish that may be locally consumed. Exposure to Hg, MeHg, and Pb are strongly associated with neurodevelopmental health outcomes in children. Exposure to Hg and MeHg are also associated with neurological illnesses in adults. Exposures to Pb are associated with renal outcomes in children and adults, and cardiovascular outcomes in adults. Exposure to As are associated with neurodevelopmental health outcomes in children, arsenicosis and skin disorders in children and adults, and potential cancers in adults, including skin, bladder, and lung. The primary objective of this framework is to guide research to assess the relationship between environmental contamination, exposures, and health outcomes related to a subset of contaminants originating from ASGM activities for particularly vulnerable populations (such as children) and the general population within a single household in the vicinity of ASGM sites in low- and medium-income countries. To achieve this objective, biomonitoring and health outcome data are linked to household survey and environmental data (for example, soil, dust, water, agricultural products, fish) at the individual level from an exposed population compared to individuals from an unexposed (reference) population. Data on exposures and health outcomes in the same individual across a representative set of individuals is required to support an understanding of the potential impact of ASGM activities on local populations. These guidelines can also assist in building local capacity to conduct environmental assessments following a consistent methodology to facilitate comparability across ASGM sites in different geographic areas. Sampling strategies and methods are prioritized given information needs, resource availability, and other constraints or considerations. The framework includes a number of supporting appendixes that provide additional resources and references on relevant topics.

**Recycling of Used Lead-Acid Batteries** Katherine von Stackelberg, Pamela R. D. Williams, Ernesto Sánchez-Triana, Santiago Enriquez, 2022-06-30 This document includes a pragmatic framework for designing representative studies and developing uniform sampling guidelines to support estimates of morbidity that are explicitly linked to exposure to land-based contaminants from used lead acid battery recycling (ULAB) activities. A primary goal is to support environmental burden of disease evaluations, which attempt to attribute health outcomes to specific sources of pollution. The guidelines provide recommendations on the most appropriate and cost-effective sampling and analysis methods to ensure the collection of representative population-level data, sample size recommendations for each contaminant and environmental media, biological sampling data, household survey data, and health outcome data. These guidelines focus on small-scale ULABs that are known to generate significant amounts of lead waste through the smelting process, as well as other metals including arsenic and cadmium. A primary concern with lead exposure is the documented association with neurodevelopmental outcomes in children as demonstrated by statistically significant reduced performance on a variety of cognitive tests. These associations are evident even in the youngest children, and toxicological and epidemiologic data indicate these effects have no threshold. Other potential exposures include arsenic and cadmium, and exposure to these contaminants is also associated with neurodevelopmental outcomes in children, as well as arsenicosis; bladder, lung, and skin cancers; and renal outcomes. The primary objective of this document is to guide research to assess the relationship between environmental contamination, exposures, and health outcomes related to a subset of contaminants originating from ULAB activities for particularly vulnerable populations (such as children) and the general population within a single household in the vicinity of ULAB sites in low- and middle-income countries. To achieve this objective, biomonitoring and health outcome data are linked to household survey and environmental data (for example, soil, dust, water, and agricultural products) at the individual level from an exposed population compared to individuals from an unexposed (reference) population. Data on exposures and health outcomes in the same individual, across a representative set of individuals, is required to support an understanding of the potential impact of ULAB activities on local populations. The guidelines can also assist in building local capacity to conduct environmental assessments following a consistent methodology to facilitate comparability across ULAB sites in different geographic areas. Sampling strategies and methods are prioritized given information needs, resource availability, and other constraints or considerations. The document includes a number of supporting appendixes that provide additional resources and references on relevant topics. Data obtained following these recommendations can be used to support consistent, comparable, and standardized community risk and health impact assessments at contaminated sites in low- and middle-income countries. These data can also be used to support economic analyses and risk management decision-making for evaluating site cleanup and risk mitigation options in the most cost-effective and efficient manner. Following these recommendations will facilitate comparisons and meta-analyses across studies by standardizing data collection efforts at the community level.

*Children's Rights in Health Care* Jozef H.H.M. Dorscheidt, Jaap E. Doek, 2018-11-22 This volume contains several analyses of health rights issues related to children. *Gender Equity in the Medical Profession* Bellini, Maria Irene, Papalois, Vassilios E., 2019-08-16 The presence of women in the practice of medicine extends back to ancient

times; however, up until the last few decades, women have comprised only a small percentage of medical students. The gradual acceptance of women in male-dominated specialties has increased, but a commitment to improving gender equity in the medical community within leadership positions and in the academic world is still being discussed. Gender Equity in the Medical Profession delivers essential discourse on strategically handling discrimination within medical school, training programs, and consultancy positions in order to eradicate sexism from the workplace. Featuring research on topics such as gender diversity, leadership roles, and imposter syndrome, this book is ideally designed for health professionals, doctors, nurses, hospital staff, hospital directors, board members, activists, instructors, researchers, academicians, and students seeking coverage on strategies that tackle gender equity in medical education.

**The Road to a Modern IT Factory** Ferri Abolhassan,2014-04-11 IT is currently going through one of its most critical phases of transformation. IT vendors and IT service organizations are revolutionizing their production and service processes, adopting industrial practices. It is only through the consistent transformation into factory-like structures that quality, effectiveness and efficiency can be increased. By integrating professional concepts and methods taken from the context of industrial production, it is possible to meet functional and qualitative requirements from the departments and therefore from the end user. On top of that this new paradigm enables the implementation of optimal processes in the organization. An interdisciplinary team of authors addresses the current challenges for global IT services organizations and describes the process of IT industrialization. The transformation of the IT industry towards the model of an IT factory is the core theme of this book, which takes the latest findings from applied research, consulting and IT business practices and combines them into a consistent and innovative approach to IT services.

**Lose It for Life Workbook** Stephen Arterburn, 2004-12-26 Everywhere you turn, you hear hype on the latest weight-loss craze--low carb vs. low fat, cardio vs. weight training, diet pills vs. surgery. Most of those programs will help you drop a few pounds, but for how long? And for what purpose? Just to look better? Yet you are more than a physical being. You want a holistic approach to health that doesn't stop at physical fitness. Lose It For Life is your answer--a uniquely balanced program that deals with the physical, emotional, and especially the spiritual elements that lead to permanent weight loss. Lose It For Life was developed by best-selling author and radio personality, Stephen Arterburn, who lost 60 pounds 20 years ago and has kept it off. In his revolutionary book, he and Dr. Linda Mintle, who is known for her clinical work with those dealing with weight issues, gave you the game plan for accomplishing what you desire most: permanent results. This workbook picks up where the book left off, offering a wide variety of exercises and activities to lead you to the next level in understanding why you do what you do, how you can shed bad habits for good, and how, with the help of God and others, you can develop a whole new approach to life, to eating, and to living healthy and free! Lose It For Life is truly the total solution for permanent weight loss. And the Lose It For Life Workbook is the perfect companion to help you maintain your results permanently! It contains even more of the information and motivation you need to live healthy, look good, and to finally . . . Lose It For Life!

Deviant Behavior John A. Humphrey, Frank Schmalleger, 2012 -At A Glance sections summarize key facts about the form of deviance being considered.

Benjamin Franklin James N. Green, Peter Stallybrass, 2006 Benjamin Franklin, Writer and Printer begins by focusing on Franklin's career as a printer, from his apprenticeship to his retirement in 1748, by which time he had created the largest printing business in colonial America. His success as a printer was based not only on the newspaper and the popular almanacs he published, but also on job printing of various kinds, ranging from folio volumes of laws to paper money and blank forms. Much of what we know about Franklin as writer and printer comes from his autobiography, the focus of the last part of this book. Left unfinished at his death in 1790, the autobiography was known to the world for nearly eighty years only in translations, fragments, paraphrases, and, in English, from retranslations of a 1791 French translation.--BOOK JACKET.

*Multinational Enterprises and the Law* Peter Muchlinski, 2021-02-18 Multinational Enterprises and the Law is the only comprehensive, contemporary, and interdisciplinary account of the techniques used to regulate multinational enterprises (MNEs) at the national, regional, and multilateral levels. In addition, it considers the effects of corporate self-regulation, and the impact of civil society and community groups upon the development of the legal order in this area. The book has been thoroughly revised and updated for this third edition, making it a definitive reference work for students, researchers, and practitioners of international economic law, business, corporate and commercial law, development studies, and international politics. Split into four parts, the book first deals with the conceptual basis for MNE regulation. It explains the growth of MNEs, their business and legal forms, and the relationship between them and the effects of a globalized economy and society, now increasingly challenged by recently revived nationalist economic policies, upon the evolution of regulatory agendas in the field. In addition, the limits of national and regional jurisdiction over MNE activities are

considered, a question that arises throughout the specialized areas of regulation covered in the remainder of the book. Part II covers the main areas of economic regulation, including controls over, and the liberalization of, entry and establishment, tax, company and competition law and the impact of intellectual property rights on technology diffusion and transfer. A specialized chapter on the regulation of multinational banks in the wake of the global financial crisis is new to this edition. Part III introduces the social dimension of MNE regulation covering labour rights, human rights, and environmental issues. Finally, Part IV deals with the contribution of international investment law to MNE regulation and to the control of investment risks, covering the main provisions found in international investment agreements, their interpretation by international tribunals, the process of investor-state arbitration, and how concerns over these developments are leading to reform proposals.

Testing, interaction, administration and treatments for the health care. Medicine is the branch of health science and the sector of public life concerned with maintaining or restoring human health through the study, diagnosis, treatment and possible prevention of disease and injury. It is both an area of knowledge – a science of body systems, their diseases and treatment – and the applied practice of that knowledge. A drug is any biological substance, synthetic or non-synthetic, that is taken for non-dietary needs. It is usually synthesized outside of an organism, but introduced into an organism to produce its action. That is, when taken into the organisms body, it will produce some effects or alter some bodily functions (such as relieving symptoms, curing diseases or used as preventive medicine or any other purposes).
