Cross + Walk Ron Mahler, 2022-12-15 As nations reel as a result of global controversies and uncertainties, and as we totter on the precipice of the Great Tribulation and eternity, claiming allegiance to Jesus Christ is becoming increasingly costly. In *Cross+Walk*, Ron Mahler delves deep into Jesus' teachings to discuss what being His disciple meant from a first-century perspective and applies those findings in real time. With punctuating language and modern verbiage, and an urgency that matches the social, political, and spiritual climate of our day, this book poses that although taking up one's cross daily can lead to formidable challenges and unavoidable trials, such a life is the best life we can live, and the only one that will ultimately yield everlasting rewards. Until we reach our glorious and unfathomable eternal destination, an adventurous journey along a narrow road awaits each disciple of Christ. Get ready to walk it like you never have before!

Genocide, Ethnonationalism, and the United Nations Hannibal Travis, 2013-01-17 *Genocide, Ethnonationalism, and the United Nations* examines a series of related crises in human civilization growing out of conflicts between powerful states or empires and indigenous or stateless peoples. This is the first book to attempt to explore the causes of genocide and other mass killing by a detailed exploration of UN archives covering the period spanning from 1945 through 2011. Hannibal Travis argues that large states and empires disproportionately committed or facilitated genocide and other mass killings between 1945 and 2011. His research incorporates data concerning factors linked to the scale of mass killing, and recent findings in human rights, political science, and legal theory. Turning to potential solutions, he argues that the concept of genocide imagines a future system of global governance under which the nation-state itself is made subject to law. The United Nations, however, has deflected the possibility of such a cosmopolitical law. It selectively condemns genocide and has established an institutional structure that denies most peoples subjected to genocide of a realistic possibility of global justice, lacks a robust international criminal tribunal or UN army, and even encourages security cooperation among states that have proven to be destructive of peoples in the past. Questions raised include: What have been the causes of mass killing during the period since the United Nations Charter entered into force in 1945? How does mass killing spread across international borders, and what is the role of resource wealth, the arms trade, and external interference in this process? Have the United Nations or the International Criminal Court faced up to the problem of genocide and other forms of mass killing, as is their mandate?

Strategic Nuclear Sharing J. Schofield, 2014-01-21 The sharing of nuclear weapons technology between states is unexpected, because nuclear weapons are such a powerful instrument in international politics, but sharing is not rare. This book proposes a theory to explain nuclear sharing and surveys its rich history from its beginnings in the Second World War.

When Biospheres Collide Michael Meltzer, 2010 NOTE: NO FURTHER DISCOUNT FOR THIS PRINT PRODUCT- OVERSTOCK SALE-- Significantly reduced list price This new book from the NASA History Series tackles an interesting duo of biological problems that will be familiar to anybody who has seen photos of Apollo astronauts quarantined after their return to Earth. Namely, how do we avoid contaminating celestial bodies with Earthly germs when we send spacecraft to study these bodies, and how do we avoid spreading foreign biological matter from space when our robotic and human spacefarers return to Earth? Biological matter from an external system could potentially cause an unchecked epidemic either on Earth or in space so strict precautions are necessary. Each time a space vehicle visits another world it runs the risk of forever changing that extraterrestrial environment. We are surrounded on Earth by a melange of different microorganisms, and if some of these hitchhike onboard a space mission, they could contaminate and start colonies on a different planet. Such an occurrence would irrevocably alter the nature of that world, compromise all future scientific exploration of the body, and possibly damage any extant life on it. By inadvertently carrying exotic organisms back to Earth on our spacecraft, we also risk the release of biohazardous materials into our own ecosystem. Such concerns were recognized by scientists even before the 1957 launch of Sputnik. This book presents the history of planetary protection by tracing the responses to the above concerns on NASA's missions to the Moon, Mars, Venus, Jupiter, Saturn, and many smaller bodies of our solar system. The book relates the extensive efforts put forth by NASA to plan operations and prepare space vehicles that return exemplary science without contaminating the biospheres of other worlds or our own. To protect irreplaceable environments, NASA has committed to conducting space exploration in a manner that is protective of the bodies visited, as well as of our own planet.

Food and Human Rights in Development: Legal and institutional dimensions and selected topics Wenche Barth Eide, 2005 The right to adequate food is firmly established in international human rights law. It is among those most cited in solemn declarations and most violated in practice. In a landmark decision, the 1996 World Food Summit decided to break with the all too familiar right-to-food rhetoric and requested a clarification of the content of the right to food and the fundamental right of everyone to be free from hunger and the means for its implementation. Since then much efforts have gone into further conceptualisation of social and cultural rights in general and the right to adequate food in particular. UN agencies, scholars, interested governments and civil society have joined forces in attempting to provide a foundation for national and international follow-up of the recommendations of the World Food Summit, reinforced by the Millennium Development Goals. This first of two volumes provides evidence of some of this work and gives direction for future activities to promote and protect the right to adequate food for all. It has contributions from some 15 authors who have all been directly involved, from different angles, in the advancement of the right to food and related human rights over the past years. Besides introducing the concept of the right to food and elaborating on its theoretical basis and meaning in development, it provides several recent examples from work both at the national and international level to apply it in practical situations, and with a special view to how to go about identifying the corresponding obligations of states and complementary duties and responsibilities of non-state actors and international organisations. Finally, several chapters address the right to food under special circumstances and for special groups needing particular attention. The book is the first of its kind on the right to food as a human right. It is not a textbook but is intended to inform and stimulate further debate among scholars, policy-makers and practitioners and activists alike, on some of the major issues of concern in applying a right-based approach to alleviating food insecurity, hunger and malnutrition, and in promoting access to and consumption of nutritionally adequate, safe and culturally acceptable food on a sustainable basis for all. It is now evident that with the current pace of
