Counterinsurgency Law William Banks, 2013-01-22 In

Counterinsurgency Law, William Banks and several distinguished contributors explore from an interdisciplinary legal and policy perspective the multiple challenges that counterinsurgency operations pose today to the rule of law - international, humanitarian, human rights, criminal, and domestic. Addressing the considerable challenges for the future of armed conflict, each contributor in the book explores the premise that in COIN operations, international humanitarian law, human rights law, international law more generally, and domestic national security laws do not provide adequate legal and policy coverage and guidance for multiple reasons, many of which are explored in this book. A second shared premise is that these problems are not only challenges for the law in post-9/11 security environments-but matters of policy with implications for the international community and for global security more generally.

Risks in Technological Systems Göran Grimvall, Åke

Holmgren, Per Jacobsson, Torbjörn Thedéen, 2009-10-24 Risks in Technological Systems is an interdisciplinary university textbook and a book for the educated reader on the risks of today's society.

In order to understand and analyze risks associated with the engineering systems on which modern society relies, other concerns have to be addressed, besides technical aspects. In contrast to many academic textbooks dealing with technological risks, this book has a unique interdisciplinary character that presents technological risks in their own context. Twenty-four scientists have come together to present their views on risks in technological systems. Their scientific disciplines cover not only engineering, economics and medicine, but also history, psychology, literature and philosophy. Taken together these contributions provide a broad, but accurate, interdisciplinary introduction to a field of increasing global interest, as well as rich opportunities to achieve in-depth knowledge of the subject.

The Ethical Challenges of Emerging Medical Technologies

Arthur L. Caplan, Brendan Parent, 2020-09-10 This collection of essays emphasizes society's increasingly responsible engagement with ethical challenges in emerging medical technology. Expansion of technological capacity and attention to patient safety have long been integral to improving healthcare delivery but only relatively recently have concepts like respect, distributive justice, privacy, and autonomy gained some power to shape the development, use,

and refinement of medical tools and techniques. Medical ethics goes beyond making better medicine to thinking about how to make the field of medicine better. These essays showcase several ways in which modern ethical thinking is improving safety, efficacy and efficiency of medical technology, increasing access to medical care, and empowering patients to choose care that comports with their desires and beliefs. Included are complimentary ethical approaches as well as compelling counter-arguments. Together, the articles demonstrate how improving the quality of medical technology relies on every stakeholder -- not just medical researchers and scientists -- to assess each given technology's strengths and pitfalls. This collection also portends one of the next major issues in the ethics of medical technology: developing the requisite moral framework to accompany shifts toward patient-centred personalized healthcare.

Bioethics and the Future of Stem Cell Research Insoo

Hyun, 2013-06-24 Despite years of heated social controversy over the use of human embryos in embryonic stem cell research, the caravan of stem cell science continues to proceed at an unrelenting pace all around the world. Bioethics and the Future of Stem Cell Research urges readers to look beyond the embryo

debate to a much wider array of ethical issues in basic stem cell science and clinical translational research, including research involving adult and induced pluripotent stem cells. Insoo Hyun offers valuable insights into complex ethical issues ranging from pre-clinical animal studies to clinical trials and stem cell tourism, all presented through a unique blend of philosophy, literature and the history of science, as well as with Dr Hyun's extensive practical experiences in international stem cell policy formation. This thoughtful book is an indispensable resource for anyone interested in the science of stem cells and the practical and philosophical elements of research ethics.

Dirty Wars Jeremy Scahill, 2013-06-04 This enhanced edition for Nook features over thirty images, including film stills from the Oscar-nominated documentary *Dirty Wars*, as well as exclusive photographs of Scahill's reporting in Yemen and Somalia. This edition also features interactive color maps, as well as seven short videos that include the film trailer, clips from the film, and interviews with Scahill. In the video interviews, Scahill shares his insights on the history of drones, President Obama's hawkish foreign policies, and the killing of Anwar al-Awlaki. In *Dirty Wars*, Jeremy Scahill, author of the New York Times best-seller

Blackwater, takes us inside America's new covert wars. The foot soldiers in these battles operate globally and inside the United States with orders from the White House to do whatever is necessary to hunt down, capture or kill individuals designated by the president as enemies. Drawn from the ranks of the Navy SEALs, Delta Force, former Blackwater and other private security contractors, the CIA's Special Activities Division and the Joint Special Operations Command (JSOC), these elite soldiers operate worldwide, with thousands of secret commandos working in more than one hundred countries. Funded through “black budgets,” Special Operations Forces conduct missions in denied areas, engage in targeted killings, snatch and grab individuals and direct drone, AC-130 and cruise missile strikes. While the Bush administration deployed these ghost militias, President Barack Obama has expanded their operations and given them new scope and legitimacy. *Dirty Wars* follows the consequences of the declaration that “the world is a battlefield,” as Scahill uncovers the most important foreign policy story of our time. From Afghanistan to Yemen, Somalia and beyond, Scahill reports from the frontlines in this high-stakes investigation and explores the depths of America's global killing machine. He goes beneath the surface of these covert

wars, conducted in the shadows, outside the range of the press, without effective congressional oversight or public debate. And, based on unprecedented access, Scahill tells the chilling story of an American citizen marked for assassination by his own government. As US leaders draw the country deeper into conflicts across the globe, setting the world stage for enormous destabilization and blowback, Americans are not only at greater risk—we are changing as a nation. Scahill unmasks the shadow warriors who prosecute these secret wars and puts a human face on the casualties of unaccountable violence that is now official policy: victims of night raids, secret prisons, cruise missile attacks and drone strikes, and whole classes of people branded as “suspected militants.” Through his brave reporting, Scahill exposes the true nature of the dirty wars the United States government struggles to keep hidden.

And God Knows the Martyrs Nathan S. French, 2020-03-24

Narratives of Jihadi-Salafi operations are often filled with praise for what are considered exemplary acts of self-renunciation in the vein of early Islamic tradition. While many studies sift through the biographies of these so-called martyrs for evidence of social, psychological, political, or economic strain in an effort to rationalize

what are often labeled suicide bombings, Nathan French argues that, through their legal arguments, Jihadi-Salafis craft a theodicy that is meant to address the suffering and oppression of the global Muslim community. Pulling from a broad selection of primary sources, including previously untranslated fatwas, on the subjects of martyrdom operations, jurisprudence, and political philosophies, French reveals that the Jihadi-Salafi legal debates on martyrdom reorient the basic objectives of the Shari 'a, focusing on maximizing the general welfare and promoting religion above all other concerns—including the preservation of life. Understanding this utilitarian turn opens the possibility for formulating a meaningful engagement and critique of Jihadi-Salafi legal interpretation and theories of warfare within a broader, just-war framework. And, as the jurists and propagandists of ISIS have demonstrated, this turn also opens the possibility for the use of self-renunciative violence as a means of state formation.

Safety, Ethics and Regulations Phuc Van Pham, Achim Rosemann, 2017-08-12 This invaluable resource discusses the safety, ethics, and regulations of developing stem cell clinical applications. Each chapter is contributed by a preeminent scientist in the field and covers such topics as clinical safety of stem cell

gene therapy, the patentability of hESC technologies, international guidelines, challenges to international stem cell clinical trials, worldwide regulations including in emerging markets like China and Taiwan. Safety, Ethics, and Regulations and the other books in the Stem Cells in Clinical Applications series will be invaluable to scientists, researchers, advanced students and clinicians working in stem cells, regenerative medicine or tissue engineering.

Yearbook of International Humanitarian Law - 2010 M.N.

Schmitt, Louise Arimatsu, Tim McCormack, 2011-08-05 The world's only annual publication devoted to the study of the laws of armed conflict, the Yearbook of International Humanitarian Law provides a truly international forum for high-quality, peer-reviewed academic articles focusing on this highly topical branch of international law. Ease of use of the Yearbook is guaranteed by the inclusion of a detailed index. Distinguished by its topicality and contemporary relevance, the Yearbook of International Humanitarian Law bridges the gap between theory and practice and serves as a useful reference tool for scholars, practitioners, military personnel, civil servants, diplomats, human rights workers and students.

Chronic Illness and Disability Esther Chang, Amanda

practice for chronic illness and disability. It provides a solid theoretical and practical foundation for students in their 2nd and 3rd years. The book includes a holistic framework for major and common chronic illness and disability.

Metaphors and Climax Charles Nwadigwe, 2014-07-20

Metaphors and Climax explores the artistic forays of the late Ogonna Agu (Ph.D.), Nigerian writer, critic, actor, director, painter and Associate Professor of drama and theatre. In 19 exciting essays, this book captures the creative canvas of Agu as expressed in the genres of literary drama, performance and theatre criticism. Besides establishing the versatility of Agu as a virtuoso artist, the volume significantly interrogates the thematic preoccupations of his plays, their sociological values and the potentials and challenges of putting them on stage as performance texts. Issues such as the creative philosophy of Agu, the dramatic reflections of the Nigerian Civil War, the ideology of Biafra, the political economy of postcolonial Africa, love, gender and culture, and the ethical demands of peace and reconciliation demonstrate the broad canvas on which Agu's creative works are painted. The compendium is a good reference material for scholars, practitioners and students of African theatre, politics and culture.

The C++ Standard Library Nicolai M. Josuttis,2012-05-25 The Best-Selling C++ Resource Now Updated for C++11 The C++ standard library provides a set of common classes and interfaces that greatly extend the core C++ language. The library, however, is not self-explanatory. To make full use of its components—and to benefit from their power—you need a resource that does far more than list the classes and their functions. **The C++ Standard Library: A Tutorial and Reference, Second Edition**, describes this library as now incorporated into the new ANSI/ISO C++ language standard (C++11). The book provides comprehensive documentation of each library component, including an introduction to its purpose and design; clearly written explanations of complex concepts; the practical programming details needed for effective use; traps and pitfalls; the exact signature and definition of the most important classes and functions; and numerous examples of working code. The book focuses in particular on the Standard Template Library (STL), examining containers, iterators, function objects, and STL algorithms. The book covers all the new C++11 library components, including Concurrency Fractional arithmetic Clocks

and timers Tuples New STL containers New STL algorithms New smart pointers New locale facets Random numbers and distributions Type traits and utilities Regular expressions The book also examines the new C++ programming style and its effect on the standard library, including lambdas, range-based for loops, move semantics, and variadic templates. An accompanying Web site, including source code, can be found at www.cppstdlib.com.

Semiconductors David K. Ferry, 2020 This second edition discusses the importance of semiconductors along with their newest applications. The book introduces the ever-changing field of semiconductors, before covering chapters on electronic structure, lattice dynamics, transport structures, optical properties and electron-electron interaction. This edition has been extensively updated with the addition of new chapters on statistics and optics, two expanded chapters on transport, and examples of the most recent applications of semiconductors. The book offers the deepest insight yet into the field of semiconductors, providing essential reading for graduate students and industry specialists.

Under Western Eyes (Unabridged Deluxe Edition) Joseph Conrad, 2023-12-06 This carefully crafted ebook: *Under Western Eyes (Unabridged Deluxe Edition)* is formatted for your eReader

with a functional and detailed table of contents. Under Western Eyes (1911) is a political thriller which takes place in St.

Petersburg, Russia, and Geneva, Switzerland. Mr. de P—, the brutal Minister of State, is assassinated by a team of two, but the bombs used claim the lives of his footman, the first assassin and a number of bystanders. When student Razumov enters his rooms, he finds Victor Haldin, a fellow student who informs him that he was the one who murdered Mr. de P—, but he and his accomplice did not make a proper escape plan. He requests Razumov's help...

Joseph Conrad (1857-1924), was a Polish author who wrote in English after settling in England. Conrad is regarded as one of the greatest novelists in English, though he did not speak the language fluently until he was in his twenties. He wrote stories and novels, often with a nautical setting, that depict trials of the human spirit in the midst of an indifferent universe. He was a master prose stylist who brought a distinctly non-English tragic sensibility into English literature. Descendents of Sir Robert Crosse Harold Zane Cross,2000 Sir Robert Crosse was born in Charlinch, Somerset, England in about 1552. He married Olyve Turner in 1576 in London. They had eight children. A possible descendant, Silvester Crosse, son of John Crosse and Margaret Wright, was born in about 1638. He emigrated in about 1682 and settled in Charleston, South Carolina. Traces descendants of this and other Crosse and Cross families, primarily in Maryland, South Carolina, North Carolina, Tennessee, Louisiana, Indiana and Texas. The author believes these families are related but has not been able to prove it in every case.

Space Architecture Neil Leach,2014-11-20 Forty years on from

the first moon landing, architecture in Space is entering a new era. Over the last decade, there has been a fundamental shift in the Space industry from short-term pioneering expeditions to long-term planning for colonisation, and new ventures such as Space tourism. Architects are now involved in designing the interiors of long-term habitable structures in Space, such as the International Space Station, researching advanced robotic fabrication technologies for building structures on the Moon and Mars, envisioning new 'space yachts' for the super-rich, and building new facilities, such as the Virgin Galactic 'Spaceport America' in New Mexico designed by Foster + Partners. Meanwhile the mystique of Space remains as alluring as ever, as high-profile designers and educators – such as Greg Lynn – are running design studios drawing upon ever more inventive computational design techniques. This issue of AD features the most significant current projects underway and highlights key areas of research in Space, such as energy, materials, manufacture and robotics. It also looks at how this research and investment in new technologies might transfer to terrestrial design and construction. Space architects: Constance Adams, Marc Cohen, Ondrej Doule, Sandra Häuplik-Meusburger, Scott Howe, Brent Sherwood, Madhu Thangavelu,

Andreas Vogler, Robert Zubrin. Architects: Bevk Perovic Arhitekti, Dekleva Gregoric Arhitekti, Foster + Partners, Neil Leach, Greg Lynn, OFIS architects, SADAR + VUGA.
