Hypercapitalism Phil Graham, 2006 Every day trillions of dollars circulate the globe in a digital data space and new forms of property and ownership emerge. Massive corporate entities with a global reach are formed and disappear with breathtaking speed, making and breaking personal fortunes the size of which defy imagination. Fictitious commodities abound. The genomes of entire nations have become corporately owned. Relationships have become the overt basis of economic wealth and political power. Hypercapitalism explores the problems of understanding this emergent form of global political economic organization by focusing on the internal relations between language, new media networks, and social perceptions of value. Taking an historical approach informed by Marx, Phil Graham draws upon writings in political economy, media studies, sociolinguistics, anthropology, and critical social science to understand the development, roots, and trajectory of the global system in which every possible aspect of human existence, including imagined futures, has become a commodity form.

Forensic Face Matching Markus Bindemann, 2021-01-07 In everyday life we identify faces regularly and seemingly with great ease. One might assume this to be a straightforward and highly accurate task. However, we are poor at identifying the faces of unfamiliar people, who we have never met before, despite the fact that many important everyday tasks depend on this. Forensic face matching requires the comparison of two face photographs, of a person who is not known to the observer. This seemingly simple task is critical for a wide range of security tasks, such as person identification at airports and borders, passport issuance and renewal, and criminal identification in police investigations. Despite its ubiquity, face matching is highly prone to error, even under conditions that are designed to maximally facilitate this task. For this reason, face matching has been studied extensively in Psychology, with the bulk of the research conducted since 2010. 'Forensic face Matching' provides readers with a wide-ranging, detailed, and critical overview of facial comparison and face matching, providing insights into its application, efficacy, and limitations in occupational settings, and of current scientific knowledge of this task.

Small Town China Beatriz Carrillo Garcia, 2011-04-19 While much has been written about rural migrant workers' experiences in the big cities, population movements into China's vast network of towns and small cities has been largely neglected. This book presents a detailed case study of rural migrant workers experiences in a small town in a north China county. The author explores the processes and institutions that enable or preclude the social inclusion of rural workers into the town's socio-economic system. Inclusion and exclusion are assessed through an examination of rural workers' immersion into the urban labour market, their access to welfare benefits and to social services, such as housing, education and health. The book proposes that outside the larger cities there are alternative accounts of urban social change and of the integration of rural migrant workers. It stresses the fact that the particular socio-economic structure of towns, where the state-owned share of the economy has been smaller and where consequently social and private forces have been more active, allowed for a more open inclusion of

rural workers. Though shortcomings are still observed, the book suggests that China's transformation may not necessarily result in dysfunctional and socially polarized urban environments. This book will be of interest to students and scholars of China's rural migrant workers, bottom-up urbanization and small town development, social policy, and more broadly on contemporary social change in China.

E-payment Margaret Tan,2004 The volume of payments handled electronically has increased dramatically in recent years, as have liquidity, volatility and the amount of money flows across borders. This important global trend works together with a growing integration in corporate business processes, and a convergence in network architecture as e-payment of all kinds moves to Internet protocol systems. The net result is a new e-payment landscape that presents daunting challenges on many levels, as well as exciting opportunities, for banks, businesses and governments. Consumer and citizen interests are also at stake. This book takes a unique, wholly integrated look at the e-payment landscape, understanding the way that existing systems are being stretched and challenged. Credit card systems are extended to facilitate Internet-based eCommerce. Consumers are becoming accustomed to using their stored-value mass transit cards to make payments for goods and services. Corporations put pressure on banks to integrate business information into their electronic payment processes. New non-financial players emerge holding important floats and many of these players are challenging for key parts of the banking franchise. This bo

The A to Z of Early North America Cameron B. Wesson,2009-08-06 Those unfamiliar with the prehistory of North America have a general perception of the cultures of the continent that includes Native Americans living in tipis, wearing feathered headdresses and buckskin clothing, and following migratory bison herds on the Great Plains. Although these practices were part of some Native American societies, they do not adequately represent the diversity of cultural practices by the overwhelming majority of Native American peoples. Media misrepresentations shaped by television and movies along with a focus on select regions and periods in the history of the United States have produced an extremely distorted view of the indigenous inhabitants of the continent and their cultures. The indigenous populations of North America created impressive societies, engaged in trade, and had varied economic, social, and religious cultures. Over the past century, archaeological and ethnological research throughout all regions of North America has revealed much about the indigenous peoples of the continent. This book examines the long and complex history of human occupation in North America, covering its distinct culture as well as areas of the Arctic, California, Eastern

Woodlands, Great Basin, Great Plains, Northwest Coast, Plateau, Southwest, and Subarctic. Complete with maps, a chronology that spans the history from 11,000 B.C. to A.D. 1850, an introductory essay, more than 700 dictionary entries, and a comprehensive bibliography, this reference is a valuable tool for scholars and students. An appendix of museums that have North American collections and a listing of archaeological sites that allow tours by the public also make this an accessible guide to the interested lay reader and high school student.
