## **Textbooks on Israel-Palestine Seyed Hadi Borhani,2022-01-27**

How is the Israel/Palestine question narrated in Western academia? What ideas dominate the key textbooks on the subject and what is presented as 'truth'? This book answers these critical questions. It is widely known that Western support of Israel played a vital role in the realization of Zionist objectives in Palestine. But academic support of Israel in the West has been a neglected issue, with Western academic knowledge being regarded as impartial and objective. This book reveals that this understanding of Western academic knowledge is wrong when it comes to the Israel/Palestine question. Rather, knowledge has been biased, misleading, and dogmatic and Western college students are subscribing to 'factual histories' based on theories at best, if not fiction. The book is the first empirical investigation able to document this partial reporting of history. Seyed Hadi Borhani examines the most popular college-level textbooks used to teach the history of the Israel/Palestine in Western universities, combining 'textbook analysis' (to determine how the dominant academic texts report the question) and a 'context analysis' (to identify who 'manufactures' the dominant knowledge). The book

provides a historical map of how the Israel-Palestine conflict is understood in the West. The book can be used as a critique for students and professors to use alongside textbooks and is a vital and much-needed intervention into the state of affairs in Western academia.

### **Dreaming in Code Scott Rosenberg, 2007-01-16 Their story**

takes us through a maze of dead ends and exhilarating

breakthroughs as they and their colleagues wrestle not only with the abstraction of code but with the unpredictability of human behavior, especially their own. Along the way, we encounter black holes, turtles, snakes, dragons, axe-sharpening, and yak-shaving—and take a guided tour through the theories and methods, both brilliant and misguided, that litter the history of software development, from the famous “mythical man-month” to Extreme Programming. Not just for technophiles but for anyone captivated by the drama of invention, Dreaming in Code offers a window into both the information age and the workings of the human mind.

**Critical Infrastructure** Robert S. Radvanovsky,Allan McDougall,2018-10-25 This edition of Critical Infrastructure presents a culmination of ongoing research and real-work experience, building upon previous editions. Since the first edition of this work, the domain has seen significant evolutions in terms of operational needs, environmental challenges and threats – both

emerging and evolving. This work expands upon the previous works and maintains its focus on those efforts vital to securing the safety and security of populations. The world continues to see a shift from a force-protection model to one more focused on resilience. This process has been exacerbated and challenged as societies face increased instability in weather and arguably climate, a destabilized geopolitical situation, and continuing economic instability. Various levels—ranging from international oversight to individual actions—continue to work towards new approaches and tools that can assist in meeting this challenge. This work keeps pace with the key changes that have occurred since previous editions and continues to provide insight into emerging and potential issues. Expanding from historical research, major areas of interest such as climate change, regulatory oversight, and internal capacity building are explored. This work provides a reference for those that are working to prepare themselves and their organizations for challenges likely to arise over the next decade. In keeping with the fast-changing nature of this field, Critical Infrastructure: Homeland Security and Emergency Preparedness, Fourth Edition has been completely revised and fully updated to reflect this shift in focus and to incorporate the latest

developments. Presents an overview of some of the emerging challenges and conflicts between the public and private sector; Continues to build the case for organizations to adopt an intelligence-driven and adaptive approach to protecting infrastructure; Presents a unique and new perspective of re-examining baseline requirements against a range of shifting factors, taking a balanced approach between risk-based planning and consequence management; Expands upon the issue of internal and lone-wolf threats that pose additional challenges to a system that continues to focus largely on external threats; and An enhanced and improved view of interdependencies in an increasingly inter-connected and network-enabled world. Preparing for the challenges of increasingly unstable threat and operating environments will pose challenges at all levels. Those involved in ensuring that critical infrastructure protection and assurance efforts function effectively and efficiently—whether as government regulators, business operators, clients of various infrastructure sectors or those seeking to maintain an accountable system – will find insights into less-explored aspects of this challenging field.

Politicking Online Costas Panagopoulos,Vassia

Gueorguieva, Allison Slotnick, Girish Gulati, Christine Williams, 2009-05-01

Of the many groundbreaking developments in the 2008 presidential election, the most important may well be the use of the Internet. In *Politicking Online* contributors explore the impact of technology for electioneering purposes, from running campaigns and increasing representation to ultimately strengthening democracy. The book reveals how social networking sites such as MySpace and Facebook are used in campaigns along with e-mail, SMS text messaging, and mobile phones to help inform, target, mobilize, and communicate with voters. While the Internet may have transformed the landscape of modern political campaigns throughout the world, Costas Panagopoulos reminds readers that officials and campaign workers need to adapt to changing circumstances, know the limits of their methods, and combine new technologies with more traditional techniques to achieve an overall balance.

*Career Moves* Libbie Rifkin, 2000

How much did making it new have to do with making it? For the four outsider poets considered here, the connection was everything. Both a social history of literary ambition in America in the 1950s and 1960s and a collective literary biography, this is an account of postwar poetry

underground.
