Biodiversity for food and agriculture and ecosystem services Food and Agriculture Organization of the United Nations ,2020-08-01 This study provides an overview of the roles that the biodiversity found in and around food and agricultural production systems play in the supply of ecosystem services ranging from provisioning services, such as the supply of food, fuel and fibre, to cultural services, such as recreation and aesthetic enjoyment, and regulating services, such as pollination, carbon sequestration, pest control and nutrient cycling.

ADDRESSING AGRICULTURE, FORESTRY AND FISHERIES IN NATIONAL ADAPTATION PLANS Food and Agriculture Organization of the United Nations,2018-05-24 The Addressing agriculture, forestry and fisheries in National Adaptation Plans – Supplementary guidelines (NAP-Ag Guidelines) provide specific guidance for national adaptation planning in the agricultural sectors. They are intended to be used by national planners and decision-makers working on climate change issues in developing countries and authorities and experts within the agriculture sectors who are contributing to climate change adaptation and NAP formulation and implementation.

Training module - How to integrate gender issues in climate-smart agriculture projects Food and Agriculture Organization of the United Nations,2017-01-01 The purpose of the training module is to provide learners with a better understanding of what the gender roles in CSA are and their critical impact on project outcomes and sustainability. The training will teach them about different methods and tools to identify, formulate, implement, monitor and evaluate gender-responsive actions and practices in CSA development projects. Through the training, learners will become familiar with the main concepts of gender, climate change and climate-smart agriculture. They will also understand the relevance of gender dimensions in climate change adaptation and mitigation and in developing

gender-responsive CSA interventions. Furthermore, they will learn the steps to take and tools and approaches available for conducting gender analysis and promoting gender mainstreaming in CSA project design, implementation and monitoring. The manual also presents available gender, climate change and CSA guidelines and other relevant materials to support learners in their work in implementing gender-responsive interventions. This training module provides basic information for organizing a short training workshop to develop gender mainstreaming capacities in CSA-related projects, throughout the whole project cycle. The module mainly focuses on activities in the field. It is important to recognize, however, that gender-responsive CSA development also requires actions at the institutional and policy level as well as changes in the existing social and cultural norms. The module also provides some recommendations for better integration of gender issues in governments' CSA policies and strategies.

Soil Science Michael T. Aide,Indi Braden,2022-12-14 Soil Science - Emerging Technologies, Global Perspectives and Applications describes recent research that illustrates the universal

importance of understanding soil and soil's relationship to environmental stewardship and food security. Research supporting emerging technologies provides abilities to discern key soil attributes that influence soil behavior and development, understand soil biology to create sustainable land management, and sequester carbon to partially negate climate change. Soil science is an interdisciplinary field of inquiry that must consider resource allocation and social needs to foster a culture that protects and secures not only soil health but also water and air quality. Chapters in this book reflect the diversity of modern thinking within the discipline of soil science, but collectively illustrate that global sustainability of food, the environment, and biological diversity are critical to future generations.

Gender in adaptation planning for the agriculture sectors Food and Agriculture Organization of the United Nations, United Nations Development Programme, 2019-11-27 This Guide for Trainers, based on workshops in nine countries, provides a complete set of materials for use in training sessions on mainstreaming gender in adaptation planning in the agriculture sectors. It is designed for a trainer or team responsible for delivering a training workshop for stakeholders who are involved in adaptation planning and related budgeting processes in agriculture. The guide presents a mix of interactive activities and presentations, to be used in whole or in part, to improve the individual-level skills and behaviours needed to foster gender-responsive agriculture adaptation plans within a broader capacity development process. The emphasis is on adaptation in agriculture, however the materials can be applied to planning for climate change adaptation in other sectors. In addition to this Guide for trainers, there are companion PowerPoint templates that workshop organizers can tailor to their

specific context.

Climate Change and Agricultural Development Udaya Sekhar Nagothu, 2016-07-15 Two of the greatest current challenges are climate change (and variability) and food security. Feeding nine billion people by 2050 will require major efforts aimed at climate change adaptation and mitigation. One approach to agriculture has recently been captured by the widely adopted term of Climate Smart Agriculture (CSA). This book not only explains what this entails, but also presents practical on-the-ground studies of practices and innovations in agriculture across a broader spectrum, including agroecology and conservation agriculture, in less developed countries. It is shown that CSA is not a completely new science and a number of its recommended technologies have been used for some time by local farmers all over the world. What is relevant and new is 'the approach' to exploit their adaptation and mitigation potential. However, a major limitation is the lack of evidence-based knowledge that is necessary for policy makers to prepare strategies for adaptation and mitigation. This book assembles knowledge of CSA, agroecology and conservation agriculture, and perspectives from different regions of the world, to build resilient food systems. The first part analyzes the concept, opportunities and challenges, and provides a global perspective, drawing particularly on studies from Africa and Asia. The second part of the book showcases results from various studies linked to soil, water and crop management measures from an ongoing program in India as well as experiences from other regions. The third section assesses the needs for an enabling policy environment, mainstreaming gender and some final recommendations for up-scaling and/or out-scaling innovations.

Climate-Smart Agriculture Food and Agriculture Organization of the United Nations, 2018-07-12 The effects of climate change and climate variability on agriculture pose the greatest challenge for Kenya to realize its Vision 2030 and other agricultural strategies. Agriculture is sensitive and highly

vulnerable to climate change/variability, whose effects are already being experienced in life threatening ways. Given the high dependency on rain-fed agriculture, people and communities whose livelihoods is conditional on agricultural sector are at higher risk of climatic extremes. This manual has been prepared to assist agricultural extension officers and community leaders in disseminating a list of Climate-Smart Agriculture practices. These set of practices when implemented in an integrated approach should ensure increased production and profitability, enhance resilience and adaptation to climate change effects but also promote low greenhouse gas emission. Though the list of practices are not exhaustive, the manual attempt to demonstrate possible effective combination of practices that are suitable for most of the Kenyan farming systems and which simultaneously achieve a farming approach that is productive, adaptive and with opportunities for carbon sinks. Each chapter describes a Climate-Smart Agriculture practice and tries to respond to the three questions of proposed technologies i.e. What?, Why? and How? The format of writing was intended to make it easy for the users to be able to apply the synergistic implementation of selected practices. This manual will be complemented by other manuals and policy guidelines prepared by FAO and the Government of Kenya to support policy makers in integrating climate change concerns in other development areas while achieving food and nutrition security.

The European Union in a Changing World Order Antonina Bakardjieva Engelbrekt, Niklas Bremberg, Anna Michalski, Lars Oxelheim, 2019-08-06 This book explores how the European Union responds to the ongoing challenges to the liberal international order. These challenges arise both within the EU itself and beyond its borders, and put into question the values of free trade and liberal democracy. The book's interdisciplinary approach brings together scholars from economics, law, and political science to provide a comprehensive analysis of how shifts in the international order affect the global position of the EU in dimensions such as foreign and security policy, trade, migration, populism, rule of law, and climate change. All chapters include policy recommendations which make the book particularly useful for decision makers and policy advisors, besides researchers and students, as well as for anyone interested in the future of the EU.

Sustainable Agriculture for Climate Change Adaptation Kathy Lewis, Douglas Warner, 2020-12-02 The Anthropocene, the time of humans. Never has human influence on the functioning of the planet been greater or in more urgent need of mitigation. Climate change, the accelerated warming of the planet's surface attributed to human activities, is now at the forefront of global politics. The agriculture sector not only contributes to climate change but also feels the severity of its effects, with the water, carbon and nitrogen cycles all subject to modification as a result. Crop production systems are each subject to different types of threat and levels of threat intensity. There is however significant potential to both adapt to and mitigate climate change within the agricultural sector and reduce these threats. Each solution must be implemented in a sustainable manner and tailored to individual regions and farming systems. This Special Issue evaluates a variety of potential climate change

adaptation and mitigation techniques that account for this spatial variation, including modification to cropping systems, Climate-Smart Agriculture and the development and growth of novel crops and crop varieties.

Water-smart agriculture in East Africa Nicol, A., Langan, S., Victor, M., Gonsalves, J., 2015-03-01

The Climate-Smart Agriculture Papers Todd S. Rosenstock, Andreea Nowak, Evan Girvetz, 2018-11-28 This book is open access under a CC BY 4.0 license. This volume shares new data relating to Climate-Smart Agriculture (CSA), with emphasis on experiences in Eastern and Southern

Africa. The book is a collection of research by authors from over 30 institutions, spanning the public and private sectors, with specific knowledge on agricultural development in the region discussed. The material is assembled to answer key questions on the following five topic areas: (1) Climate impacts: What are the most significant current and near future climate risks undermining smallholder livelihoods? (2) Varieties: How can climate-smart varieties be delivered quickly and cost-effectively to smallholders? (3) Farm management: What are key lessons on the contributions from soil and water management to climate risk reduction and how should interventions be prioritized? (4) Value chains: How can climate risks to supply and value chains be reduced? and (5) Scaling up: How can most promising climate risks reduction strategies be quickly scaled up and what are critical success factors? Readers who will be interested in this book include students, policy makers, and researchers studying climate change impacts on agriculture and agricultural sustainability.

Agriculture and Ecosystem Resilience in Sub Saharan Africa Yazidhi Bamutaze, Samuel Kyamanywa, Bal Ram Singh, Gorettie Nabanoga, Rattan Lal, 2019-05-22 This volume discusses emerging contexts of agricultural and ecosystem resilience in Sub Saharan Africa, as well as contemporary technological advances that have influenced African livelihoods. In six sections, the book addresses the sustainable development goals to mitigate the negative impacts on agricultural productivity brought about by climate change in Africa. Some of the challenges assessed include soil degradation, land use changes, natural resource mismanagement, declining crop productivity, and economic stagnation. This book will be of interest to researchers, NGOs, and development organizations. Section 1 focuses on climate risk management in tropical Africa. Section 2 addresses the water-ecosystem-agriculture nexus, and identifies the best strategies for sustainable water use. Section 3 introduces Information Communication Technology (ICT), and how it can be used for

ecosystem and human resilience to improve quality of life in communities. Section 4 discusses the science and policies of transformative agriculture, including challenges facing crop production and management. Section 5 addresses landscape processes, human security, and governance of agro-ecosystems. Section 6 concludes the book with chapters uniquely covering the gender dynamics of agricultural, ecosystem, and livelihood resilience.

Synthesis and Modeling of Greenhouse Gas Emissions and Carbon Storage in Agricultural and Forest Systems to Guide Mitigation and Adaptation Stephen J. Del Grosso, Lajpat R. Ahuja, William J. Parton, 2020-01-22 Crop, livestock, and forestry productions systems are important sources and sinks of greenhouse gases, but estimates of the magnitude of gas fluxes are more uncertain than those for other economic sectors such as transportation and electricity generation. Recent improvements in process-level understanding, modeling software, and observational data used for model testing have increased the accuracy of model predictions, but substantial uncertainty remains, particularly regarding the potential for different management practices to mitigate emissions. The chapters in this volume demonstrate that both simple methods and complex models have strengths and limitations depending on stakeholder interest, scale of application, and other factors. Future improvement can be facilitated by organizing model input and testing data into web-accessible databases and by making model algorithms more available and transparent.
