HIV/AIDS Treatment in Resource Poor Countries

Yichen Lu, Max Essex, Chris Chanyasulkit, 2012-10-26

The book focuses on HIV/AIDS prevention and treatment strategies in resource-poor settings. Contributors include HIV/AIDS researchers and public health administrators from the US, Africa, China, and Thailand. Several chapters, written by local health officials, take a close look at AIDS prevention and treatment in China at the community level. Other chapters cover issues of treatment scale-up, drug resistance, and mother-to-child transmission in Southern Africa and Thailand, and offer lessons learned for researchers in other developing countries. Overall the aim of this book is to bring some of the latest issues to the fore, and to foster exchange and collaboration between AIDS researchers in developing countries. This book grew out of an annual conference held in China and organized by the Harvard School of Public Health, and could possibly become the first volume of a series.

Animal and Translational Models for CNS Drug

Discovery: Neurological Disorders Robert A.

McArthur, Franco Borsini, 2008-11-18 Neurological Disorders is written for researchers in both academia and the pharmaceutical industry who use animal models in research and development of drugs for neurological disorders such as neurofibromatosis, Alzheimer's disease, Parkinson's disease, Huntington disease, ALS, and the epilepsies. Neurological Disorders has introductory chapters expressing the view of the role and relevance of animal models for drug

discovery and development for the treatment of psychiatric disorders from the perspective of (a) academic basic neuroscientific research, (b) applied pharmaceutical drug discovery and development, and (c) issues of clinical trial design and regulatory agencies limitations. Each volume examines the rationale, use, robustness and limitations of animal models in each therapeutic area covered and discuss the use of animal models for target identification and validation. The clinical relevance of animal models is discussed in terms of major limitations in cross-species comparisons, clinical trial design of drug candidates, and how clinical trial endpoints could be improved. The aim of this series of volumes on Animal and Translational Models for CNS Drug Discovery is to identify and provide common endpoints between species that can serve to inform both the clinic and the bench with the information needed to accelerate clinically-effective CNS drug discovery. This is the second volume in the three volume-set, Animal and Translational Models for CNS Drug Discovery 978-0-12-373861-5, which is also available for purchase individually. Clinical, academic, government and industry perspectives fostering integrated communication between principle participants at all stages of the drug discovery process Critical evaluation of animal and translational models improving transition from drug discovery and clinical development Emphasis on what results mean to the overall drug discovery process Exploration of issues in clinical trial design and conductance in each therapeutic area

Animal and Translational Models for CNS Drug Discovery Robert A. McArthur, Franco Borsini, 2008-11-27 Animal and Translational Models for CNS Drug Discovery combines the experience of academic, clinical and pharmaceutical neuroscientists in a unique collaborative approach

to provide a greater understanding of the relevance of animal models of neuropsychiatric disorders and their role as translational tools for the discovery of CNS drugs being developed for the treatment of these disorders. The focus of this three-volume series of essays is to present a consensual picture of the translational value of animal models from leading experts actively involved in the use of animal models for understanding fundamental neurobiology of CNS disorders and the application of this knowledge to CNS drug discovery, and clinical investigators involved in clinical trials, drug development and eventual registration of novel pharmaceuticals. Each volume of the Animal and Translational Models for CNS Drug Discovery series is dedicated to the development and use of animal models in key therapeutic areas in psychiatric, neurologic and reward deficit disorders. Each volume has introductory chapters expressing the view of the role and relevance of animal models for CNS drug discovery and development from the perspective of (a) academic basic neuroscientific research, (b) applied pharmaceutical drug discovery and development, and (c) issues of clinical trial design and regulatory agencies limitations. Each volume examines the rationale, use, robustness and limitations of animal models in relevant therapeutic areas and discusses the use of animal models for target identification and validation. The clinical relevance of animal models is discussed in terms of major limitations in cross-species comparisons, clinical trial design of drug candidates, and how clinical trial endpoints could be improved. The aim of this series of volumes on Animal and Translational Models for CNS Drug Discovery is to identify and provide common endpoints between species that can serve to inform both the clinic and the bench with the information needed to accelerate clinically-effective CNS drug

discovery. - Provides clinical, academic, government and industry perspectives fostering integrated communication between principle participants at all stages of the drug discovery process - Critical evaluation of animal and translational models improving transition from drug discovery and clinical development - Emphasizes what results mean to the overall drug discovery process - Explores issues in clinical trial design and conductance in each therapeutic area - Each volume is available for purchase individually.

"Be with me always - take any form - drive me mad! only do not leave me in this abyss, where I cannot find you! Oh, God! it is unutterable! I can not live without my life! Disabling Interpretations Susan Gluck Mezey, 2005
Annotation Susan Mezey argues that the Americans with Disabilities Act (ADA) of 1990 has not fulfilled its potential primarily because of the judiciary's disabling interpretations in adjudicating ADA claims. In a decade of litigation, judicial interpretation of the law has largely constricted the parameters of disability rights and excluded large numbers of claimants from the reach of the law. The Supreme Court has not interpreted the act broadly, as was intended by Congress, and this method of decision making has been for the most part mirrored by the courts below. The high court's rulings to expand state sovereign immunity and insulate states from liability in damage suits have also caused claimants to become enmeshed in litigation and have encouraged defendants to challenge other laws affecting disability rights. Despite the law's strong civil rights rhetoric, disability rights remain an imperfectly realized goal.--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

The Fingerprint U. S. Department Justice, 2014-08-02 The idea of The Fingerprint Sourcebook originated during a meeting in April 2002. Individuals representing the fingerprint, academic, and scientific communities met in Chicago, Illinois, for a day and a half to discuss the state of fingerprint identification with a view toward the challenges raised by Daubert issues. The meeting was a joint project between the International Association for Identification (IAI) and West Virginia University (WVU). One recommendation that came out of that meeting was a suggestion to create a sourcebook for friction ridge examiners, that is, a single source of researched information regarding the subject. This sourcebook would provide educational, training, and research information for the international scientific community.
