*The Future of War* Lawrence Freedman,2017-10-10 An award-winning military historian, professor, and political adviser delivers the definitive story of warfare in all its guises and applications, showing what has driven and continues to drive this uniquely human form of political violence. Questions about the future of war are a regular feature of political debate, strategic analysis, and popular fiction. Where should we look for new dangers? What cunning plans might an aggressor have in mind? What are the best forms of defense? How might peace be preserved or conflict resolved? From the French rout at Sedan in 1870 to the relentless contemporary insurgencies in Iraq and Afghanistan, Lawrence Freedman, a world-renowned military thinker, reveals how most claims from the military futurists are wrong. But they remain influential nonetheless. Freedman shows how those who have imagined future war have often had an idealized notion of it as confined, brief, and decisive, and have regularly taken insufficient account of the possibility of long wars-hence the stubborn persistence of the idea of a knockout blow, whether through a dashing land offensive, nuclear first strike, or cyberattack. He also notes the lack of attention paid to civil wars until the West began to intervene in them during the 1990s, and how the boundaries between peace and war, between the military, the civilian, and the criminal are becoming increasingly blurred. Freedman's account of a century and a half of warfare and the (often misconceived) thinking that precedes war is a challenge to hawks and doves alike, and puts current strategic thinking into a bracing historical perspective.

**Digital Contact Tracing for Pandemic Response** Jeffrey P. Kahn,Johns Hopkins Project on Ethics and Governance of Digital Contact Tracing Technologies,2020-05-29 As nations race to hone contact-tracing efforts, the world's experts consider strategies for maximum transparency and impact. As public health professionals around the world work tirelessly to respond to the COVID-19 pandemic, it is clear that traditional methods of contact tracing need to be augmented in order to help address a public health crisis of unprecedented scope. Innovators worldwide are racing to develop and implement novel public-facing technology solutions, including digital contact tracing technology. These technological products may aid public health surveillance and containment strategies for this pandemic and become part of the larger toolbox for future infectious outbreak prevention and control. As technology evolves in an effort to meet our current moment, Johns Hopkins Project on Ethics and Governance of Digital Contact Tracing Technologies—a rapid research and expert consensus group effort led by Dr. Jeffrey P. Kahn of the Johns Hopkins Berman Institute of Bioethics in collaboration with the university's Center for Health Security—carried out an in-depth analysis of the technology and the issues it raises. Drawing on this analysis, they produced a report that includes detailed recommendations for technology companies, policymakers, institutions, employers, and the public. The project brings together perspectives from bioethics, health security, public health, technology development, engineering, public policy, and law to wrestle with the complex interactions of the many facets of the technology and its applications. This team of experts from Johns Hopkins University and other world-renowned institutions has crafted clear and detailed guidelines to help manage the creation, implementation, and application of digital contact tracing. Digital Contact Tracing for Pandemic Response is the essential resource for this fast-moving crisis. **Viitorul războiului** Lawrence Freedman,2019-11-06 Un istoric militar, profesor și consultant politic, câștigător a numeroase premii, ne oferă istoria completă a războiului, sub toate formele și cu toate implicațiile sale, arătând ce a impulsionat și continuă să impulsioneze această formă umană unică de violență politică. Întrebările despre viitorul războiului sunt o prezență obișnuită a dezbaterii politice, a analizei strategice și a ficțiunii populare. Unde ar trebui să căutăm noi pericole? Ce planuri viclene poate avea un agresor? Care sunt cele mai bune forme de apărare? Cum ar putea fi păstrată pacea sau rezolvat conflictul? De la haosul francez de la Sedan, din 1870, la insurgențele contemporane din Irak și Afghanistan, Lawrence Freedman, un gânditor militar recunoscut la nivel mondial, ne dezvăluie cum cea mai mare parte a ideilor futurologilor militari de azi sunt greșite. Dar acestea își păstrează, totuși, influența. Freedman ne demonstrează că aceia care și-au imaginat viitorul războiului au avut adesea o imagine idealizată despre acesta ca fiind restrâns între anumite granițe, cu caracter scurt și decisiv, și au trecut constant cu vederea peste posibilitatea existenței unor războaie lungi – de aici persistența încăpățânată a ideii unei lovituri decisive, fie printr-o ofensivă terestră îndrăznească, printr-o lovitură nucleară preventivă sau printr-un atac cibernetic. Tot el observă și lipsa de atenție față de războaiele civile, până ce Occidentul a început să intervină în acestea în timpul anilor 1990, și cum granițele dintre pace și război, dintre militar, civil și criminal devin din ce în ce mai neclare.

This economic activity, conceptually referred to as the bioeconomy, presents many opportunities to create jobs, improve the quality of life, and continue to drive economic growth. While the United States has been a leader in advancements in the biological sciences, other countries are also actively investing in and expanding their capabilities in this area. Maintaining competitiveness in the bioeconomy is key to maintaining the economic health and security of the United States and other nations. Safeguarding the Bioeconomy evaluates preexisting and potential approaches for assessing the value of the bioeconomy and identifies intangible assets not sufficiently captured or that are missing from U.S. assessments. This study considers strategies for safeguarding and sustaining the economic activity driven by research and innovation in the life sciences. It also presents ideas for horizon scanning mechanisms to identify new technologies, markets, and data sources that have the potential to drive future development of the bioeconomy.
