**Insanity and Genius** Harry Eiss, 2014-06-02 In his book about the discovery of the structure of DNA, James Watson wrote, "So we had lunch, telling ourselves that a structure this beautiful just had to exist." Indeed, the quest most often asked by scientists about a scientific theory is "Is it beautiful?" Yes, beauty equals truth. Scientists know, mathematicians know. But the beauties, the truths of mathematics and science were not the truths that inspired the author as a child, and he intuitively knew that the truths he needed come from a different way of knowing, a way of knowing not of the world of logic and reason and explanation (though they have a value), but rather a way of knowing that is of the world expression, a world that enters the truths beyond the grasp of logic. That is what this book is all about. It is an exploration of the greatest minds of human existence struggling to understand the deepest truths of the human condition. This second edition updates the previous one, incorporating new publications on Van Gogh, recent discoveries in neurology, psychology, and the rapid developments in understanding DNA and biotechnology. We've come a long way already from that original discovery by Watson and his coauthor Francis Crick.

**International Handbook of Disaster Research** Amita Singh, 2023-11-04 □ This handbook is a comprehensive source of information, analysis and directions in disaster studies. It goes beyond the oft-explored issues of management and science related to the topic and explores policies, governance, law and decision-making combined with the processes of implementation and enforcement, all the while integrating the latest science and technology updates related to the topic, such as artificial intelligence and early warning systems. It brings together studies which relate to sociology, politics and institutional economics, which work under the impact of resource availability, issues of leadership and international laws. Disasters are trans-boundary and disaster studies are trans-disciplinary. It is this aspect which would form the fulcrum of contributions and present a new, refreshing and innovative design for the handbook. The transformatory pedagogy which started with the Hyogo Framework for action 2005-2015 and The Sendai Framework for Disaster Risk Reduction 2015-2030 outlines seven clear targets and four priorities for action to prevent new and reduce existing disaster risks. The four priority areas around which the book would revolve are (i) Understanding disaster risk; (ii) Strengthening disaster risk governance to manage disaster risk; (iii) Investing in disaster reduction for resilience and; (iv) Enhancing disaster preparedness for effective response, and to Build Back Better in recovery, rehabilitation and reconstruction.

**Pollination Services to Agriculture** Barbara Gemmill-Herren, 2016-04-14 It is only recently that the immense economic value of pollination to agriculture has been appreciated. At the same time, the alarming collapse in populations of bees and other pollinators has highlighted the urgency of addressing this issue. This book focuses on the specific measures and practices that the emerging science of pollination ecology is identifying to conserve and promote animal pollinators in agroecosystems. It reviews the expanding knowledge base on pollination services, providing evidence to document the status, trends and importance of pollinators to sustainable agricultural production. It provides practical and specific measures that land managers can undertake to ensure that agroecosystems are supportive and friendly to pollinators. It draws on the Global Pollination Project, supported by UNEP/GEF and implemented by FAO and seven partner countries (Brazil, Ghana, India, Kenya, Nepal, Pakistan and South Africa), which serve to provide lessons from the field.

**The Securitization of Climate Change: Australian and United States' Military Responses (2003 - 2013)** Michael Durant Thomas, 2017-07-25 This book examines how the armed forces of the United States and Australia have responded to the threat posed by climate change to national security. Drawing on established securitisation frameworks ('Copenhagen' and 'Paris' Schools), the author uses a combination of quantitative and qualitative techniques to systematically examine more than 3,500 speeches, policies and doctrinal articles since 2003. Importantly, the author undertakes an examination of the intersection between the political and the military spheres, probing the question of how ideology has influenced the military's uptake on the issue. In this context, the author identifies the difficulty of an ostensibly apolitical institution responding to what has become both a hyper-political issue and an unprecedented security threat. A close examination of the key political actors – their intent, outlook and political mandate for broader climate action – is therefore crucial to understanding the policy freedom and constraints within which military leaders operate. The book consists of eight chapters divided into four parts, focusing on: perspectives and methodological insights; empirical case studies; case study comparison; and concluding observations. • Offers a rare and systematic examination of military climate policy by a military officer from Australia • Identifies a divergence of Australian military climate policy from that of the US military during the Obama Administration • Develops a unique method that quantifies climate security, enabling a graphical representation for quick and ready reference ideally suited to policy-makers

**The Falling Rate of Profit and the Great Recession of 2007-2009** Peter H. Jones, 2021-04-06 In *The Falling Rate of Profit and the Great Recession of 2007-2009*, Peter H. Jones develops a new non-equilibrium interpretation of the labour theory of value Karl Marx builds in *Capital*. Applying this to US national accounting data, Jones shows that when measured correctly the profit rate falls in the lead up to the Great Recession, and for the main reason Marx identifies: the rising organic composition of capital. Jones also details a new theory of finance, which shows how cycles in the profit rate relate to stock market booms and slumps, and movements in the interest rate. He discusses the implications of the analysis and Marx and Engels’ work generally for a democratic socialist strategy.

Building Resilient Banking Sectors in the Caucasus and Central Asia International Monetary Fund. Middle East and Central Asia Dept.,2018-07-06 External shocks since 2014—lower oil prices and slower growth in key trading partners—have put financial sectors, mainly banks, in the eight Caucasus and Central Asia (CCA) countries under increased stress. Even before the shocks, CCA banking sectors were not at full strength. Asset quality was generally weak, due in part to shortcomings in regulation, supervision, and governance. The economies were highly dollarized. Business practices were affected by lack of competition and, in most countries, connected lending, which undermined banking sector health. Shortcomings in financial regulation and supervision allowed the unsound banking practices to remain unaddressed. The external shocks exacerbated in these underlying vulnerabilities. Strains in CCA banking sectors intensified as liquidity tightened, asset quality deteriorated, and banks became undercapitalized. These challenges have required public intervention in some cases.
