Math for Real Life Jim Libby,2017-01-05 Where are we ever going to use this? Every high school math student has asked this question. Often teachers themselves aren't sure how to respond. One answer is that higher mathematics learned in high school will be essential to learning yet more at the college level. A more satisfactory answer calls for an awareness of how math is applied in many specific areas. Written primarily for teachers, this book presents hundreds of practical applications for mathematics--from baseball statistics to the theory of relativity--that can be understood by anyone with a knowledge of high school algebra, geometry and trigonometry.

Why Can't We Just Get Along Anthony Hughes,2021-08-17 This book combines the history of American descendants of slaves with contemporary events to explain the animus existing between the two Americas - one white, one black. WHY CAN'T WE ALL JUST GET ALONG answers Rodney's King's question by delving into the weeds of the true black experience in America - slavery, post-civil war black codes, Jim Crow segregation, Lynching, medical experimentation on men, women, and children, and race riots flaring up in every major city of the country. This unique odyssey illustrates the struggles, tears, and generations of the heartbreak of a race of people whom America would long to forget. Ignoring the fact that African-Americans built large segments of the United States, making it the wealthiest nation in the entire world, the world still views them under the lens of hate, disdain, and mistrust. Though they have proven their worth as a community, the dominant society still places them in a position at the bottom rung of society. Though unpublished when originally written in 2005, the unabridged history lessons included in this book are still applicable today.

The authors examine women's lives, ideologies of gender, and the differences between ideology and reality through the recent research across many disciplines, including history, literary studies, art history, musicology, history of science and medicine, and religious studies. Gender, crime and empire Kirsty Reid,2017-03-01 Between 1803 and 1853, some 80,000 convicts were transported to Van Diemen's Land. Revising established models of the colonies, which tend to depict convict women as a peculiarly oppressed group, Gender, crime and empire argues that convict men and women in fact shared much in common. Placing men and women, ideas about masculinity, femininity, sexuality and the body, in comparative perspective, this book argues that historians must take fuller account of class to understand the relationships between gender and power. The book explores the ways in which ideas about fatherhood and household order initially informed the state's model of order, and the reasons why this foundered. It considers the shifting nature of state policies towards courtship, relationships and attempts at family formation which subsequently became matters of class conflict. It goes on to explore the ways in which ideas about gender and family informed liberal and humanitarian critiques of the colonies from the 1830s and 1840s and colonial demands for abolition and self-government.

Marine and Coastal Geographical Information Systems Dawn J. Wright,Darius J. Barlett,1999-12-23 Marine and coastal applications of GIS are finally gaining wide acceptance in scientific as well as GIS communities, and cover the fields of deep sea geology, chemistry and biology, and coastal geology, biology, engineering and resource management. Comprising rigorous contributions from a group of leading scholars in marine and coastal GIS, this book will inspire and stimulate continued research in this important new application domain. Launched as a project to mark the UN International Year of the Ocean (1998) and supported by the International Geographical Union's Commission on Coastal Systems, this book covers progress and research in the marine and coastal realms, in the areas of theory, applications and empirical results. It is the first book of its kind to address basic and applied scientific problems in deep sea and coastal science using GIS and remote sensing technologies. It is designed for GIS and remote sensing specialists, but also for those with an interest in oceans, lakes and shores. Coverage ranges from seafloor spreading centres to Exclusive Economic Zones to microscale coastal habitats; and techniques include submersibles, computer modelling, image display, 3-D temporal data visualization, and development and application of new algorithms and spatial data structures. It illustrates the broad usage of GIS, image processing, and computer modelling in deep sea and coastal environments, and also addresses important institutional issues arising out of the use of these technologies.

Hypocrisy Trap Catherine Weaver,2008-11-16 This text explores how the characteristics of change in a complex organization make hypocrisy difficult to resolve,

especially after its exposure becomes a critical threat to the organization's legitimacy and survival.

Civil Militia David J. Francis, 2017-07-05 This volume critically engages with the phenomenon of civil militias in Africa, especially the nature of threats and challenges they pose to national and human security. It questions why the African political scene is increasingly inundated with the activities of civil militias, examines the socio-political and economic conditions that trigger and/or encourage and sustain the operations of civil militias, and investigates the dominant motivations of African civil militias. In the face of this complex security emergency, the volume conceptualizes and theorizes the phenomenon of civil militias; focuses the academic debate and policy on the links between civil militias and the growing cycle of state failure, instability, collapse and fragmentation in Africa; broadly and critically explores and expounds the short-term security consequences of the operations of civil militias; and articulates a corpus of policy-relevant knowledge. The book is ideally suited to courses on African studies, security and peace studies and military studies but would also be of interest to practitioners.

Internally Displaced People Global IDP Survey, 2002 Includes statistics.

Internally Displaced People Janie Hampton, 2014-10-14 The number of internally displaced people far outnumbers estimated refugees who have fled their countries. The majority of displaced populations survive with very little security or legal protection. Responding to the needs of internally displaced people is one of the greatest humanitarian challenges of our time.; Revised and updated from the first edition, this volume includes information on internal displacement in 47 different countries across the globe – that is to say all countries experiencing conflict-induced displacement at the time of publication. There is discussion of the causes of displacement, patterns of flight, protection concerns and international response.

Global Climate Xavier Rodo, Francisco Comin, 2013-03-09 Uncertainty for Everyone The one thing that is certain about the world is that the world is uncertain. I have here, the question that apart of the matter, living matter, has to resolve in each and every one of its moments of existence. The environment of a living being is apart of the living being where it turns out, the rest of the living beings live. This is the drama of life on earth. Every living individual debates with his environment, exchanging matter, energy and information in the hope of staying alive, the same as all living beings who share that same environment. The adventure of a living being (of all living beings) is to maintain reasonable independence in face of the fluctuations of uncertainty within the environment. The range of restrictions and mutual relationships is colossal. How is the transcendental pretension of staying alive regulated? There is an equation imposed by the laws of thermodynamics and the mathematical theory of information about the interaction of a living being with his environment which we could state like this: The complexity of a living individual plus his capacity for anticipation in respect to his environment is identical to the uncertainty of the environment plus the capacity of that living being to change the environment.

Intrusive Partners – Elusive Mates Stephen J. Betchen, 2013-08-21 When two people form a relationship or marry, they begin to move towards one another with the expectation of closeness. The emotionality or intensity that accompanies this process, however, may result in fusion followed by a desperate need for space or distance. *Intrusive Partners – Elusive Mates* is the first book to deal exclusively with the pursuer-distancer interaction, and to focus significant attention on the emerging male pursuer-female distancer dynamic. This book revisits Fogarty's work, traces the concept over time and across different professional fields, and discusses in detail the concepts correlation with gender issues and social change. A detailed, step-by-step model of treatment to aid in de-escalating this potentially problematic style is also offered. The model in and of itself is unique because it integrates psychoanalytic conflict theory and psychodynamic systems theory into one treatment approach. This book is intended to offer the therapist a model for understanding and effectively discussing this dynamic, while at the same time allowing couples to read and explore it on their own.

Middle Eastern Minorities Ibrahim Zabad, 2017-03-27 This is a comprehensive survey of minorities in the Middle East with a special focus on the post Arab Spring era. Minority communities in the Middle East are the most susceptible to the turbulence engulfing the region; the majority may suffer physical violence and socioeconomic loss, but minorities could potentially vanish. Instead of ushering in democracy and inclusive politics, the revolutionary upheavals have prompted chaos and fear and reinforced the resurgence of Islamic fundamentalism throughout the region. Zabad uses historical sources as well as first-hand interviews to vividly describe the current status of minorities in the Middle East, explaining attitudes towards the revolutionary upheavals as well as the various strategies they used to avail themselves of the opportunities presented and to confront the risks posed. The question of ethnic, sectarian and religious minorities is situated in the context of the broader history of the region in order to explain the underlying institutional and ideological factors that caused their predicament and problematized their relationship with the majority. The book provides a rich trove of information and insights generated from ten case studies that covered the Shi'a in Saudi Arabia, Bahrain, Lebanon and Egypt, the Druze, the Alawites, Christians and Kurds in Syria, the Copts in Egypt, and the Zaydis in Yemen.
