Restriction Enzymes Wil A. M. Loenen, 2019 Restriction enzymes cleave DNA at specific recognition sites and have many uses in molecular biology, genetics, and biotechnology. More than 4000 restriction enzymes are known today, of which more than 621 are commercially available, justifying their description by Nobel Prize winner Richard Roberts as the workhorses of molecular biology. This book by Wil Loenen is the first full-length history of these invaluable tools, from their recognition in the 1950s to the flowering of their development in the 1970s and 1980s to their ubiquitous availability today. Loenen has worked with restriction enzymes throughout her career as a research scientist, during which she came to know many of the leaders in this field personally and professionally. She is the author of several authoritative and widely appreciated reviews of the enzymes' biology. Her book was written with the close assistance of several of the field's pioneers, including Rich Roberts, Stuart Linn, Tom Bickle, Steve Halford, and the late Joe Bertani. The seed for the book was sown at a retirement party for Noreen Murray, to whom the book is dedicated, and its roots lie in a remarkable 2013 conference at Cold Spring Harbor Laboratory that celebrated the people and events that were vital to the field's development. Funding for the book was made possible by the Genentech Center for the History of Molecular Biology and Biotechnology at Cold Spring Harbor Laboratory.

Improving Import Food Safety Wayne Ellefson, Lorna Zach, Darryl Sullivan, 2012-10-22 Food safety has been a global concern for many years. While global sourcing of foods and ingredients provides great opportunity for variety and diversity of cultural products, there are significant risks. Programs that regulate food safety and quality in countries around the world vary in their scope and effectiveness, with many being underfunded. Rapidly developing countries may lack the expertise, laboratory resources for testing, and established inspection programs to adequately promote the safety of foods. Rather, these countries may be more focused on providing enough food for their citizens. Lack of documentation or traceability in the exporting country can further exacerbate the situation. Of course, safety problems in food imported from more developed countries also occur, and the source of food borne disease outbreaks are found regularly within the United States. Improving Import Food Safety gathers together vital information on the food safety programs of national governments, the food industry, and the testing industry. Chapters have been contributed by authors from the United States, Latin America, Europe, and Asia. Readers will learn about a variety of regulatory approaches to food safety at the federal and state levels in the United States, as well as in selected countries and within the food industry itself. They will also gain insights into the nature and source of safety problems, in addition to approaches to food safety around the world. The book is divided into three sections: Highlighting Key Issues: authors illustrate the millions of permutations for the origin of ingredients, discussing the difficulty of policing imports, providing a unique perspective on the economic situation in China and insight into development of support for small farm producers in Mexico. Legal and Regulatory Issues/Structures in the USA and Abroad: describes the legal and regulatory system in the European Union, the United States, and China, plus a chapter addressing global approaches to fraud. Potential Strategies to Improve Import Safety: presents strategies to deal with what are ultimately global issues, but on multiple levels. Perspectives are provided by authors from Industry, and industry trade association, academia, and a recently semi-retired, global ambassador of food safety. Readers will find this book noteworthy because

of the diverse topics and perspectives offered on the challenges of keeping food safe in a global economy. Authors come from a variety of backgrounds, and each has provided a unique perspective on this critical topic. The volume is aimed at importers and exporters of food and ingredients; food microbiologists, food safety and QC/QA personnel; regulatory and legal personnel in food manufacturing companies; food policy makers and regulatory officials and faculty and graduate students in food science.

from Sand Creek Simon J. Ortiz, 2022-09-13 The massacre of Cheyenne and Arapaho women and children by U.S. soldiers at Sand Creek in 1864 was a shameful episode in American history, and its battlefield was proposed as a National Historic Site in 1998 to pay homage to those innocent victims. Poet Simon Ortiz had honored those people seventeen years earlier in his own way. That book, from Sand Creek, is now back in print. Originally published in a small-press edition, from Sand Creek makes a large statement about injustices done to Native peoples in the name of Manifest Destiny. It also makes poignant reference to the spread of that ambition in other parts of the world—notably in Vietnam—as Ortiz asks himself what it is to be an American, a U.S. citizen, and an Indian. Indian people have often felt they have had no part in history, Ortiz observes, and through his work he shows how they can come to terms with this feeling. He invites Indian people to examine the process they have experienced as victims, subjects, and expendable resources—and asks people of European heritage to consider the motives that drive their own history and create their own form of victimization. Through the pages of this sobering work, Ortiz offers a new perspective on history and on America. Perhaps more important, he offers a breath of hope that our peoples might learn from each other: This America has been a burden of steel and mad death, but, look now, there are flowers and new grass and a spring wind rising from Sand Creek.

Exploring Mars Scott Hubbard, 2011 The Red Planet has been a subject of fascination for humanity for thousands of years, becoming part of our folklore and popular culture. The most Earthlike of the planets in our solar system, Mars may have harbored some form of life in the past and may still possess an ecosystem in some underground refuge. The mysteries of this fourth planet from our Sun make it of central importance to NASA and its science goals for the twenty-first century. In the wake of the very public failures of the Mars Polar Lander and the Mars Climate Orbiter in 1999, NASA embarked on a complete reassessment of the Mars Program. Scott Hubbard was asked to lead this restructuring in 2000, becoming known as the Mars Czar. His team's efforts resulted in a very successful decade-long series of missions--each building on the accomplishments of those before it--that adhered to the science adage follow the water when debating how to proceed. Hubbard's work created the Mars Odyssey mission, the twin rovers Spirit and Opportunity, the Mars Reconnaissance Orbiter, the Phoenix mission, and most recently the planned launch of the Mars Science Laboratory. Now for the first time Scott Hubbard tells the complete story of how he fashioned this program, describing both the technical and political forces involved and bringing to life the national and international cast of characters engaged in this monumental endeavor. Blending the exciting stories of the missions with the thrills of scientific discovery, Exploring Mars will intrigue anyone interested in the science, the engineering, or the policy of investigating other worlds.

Even More Brain-powered Science Thomas O'Brien, 2011 The third of Thomas O'Brien's books designed for 50012 grade science teachers, *Even More Brain-Powered Science* uses questions and inquiry-oriented discrepant events or experiments or demonstrations in which the outcomes are not what students expect or to dispute misconceptions and challenge students to think about, discuss, and examine the real outcomes of the experiments. Leaving Mesa Verde Timothy A. Kohler, Mark D. Varien, Aaron M. Wright, 2013-11-15 It is one of the great mysteries in the archaeology of the Americas: the depopulation of the northern Southwest in the late thirteenth-century AD. Considering the numbers of people affected, the distances moved, the permanence of the departures, the severity of the surrounding conditions, and the human suffering and culture change that accompanied them, the abrupt conclusion to the farming way of life in this region is one of the greatest disruptions in recorded history. Much new paleoenvironmental data, and a great deal of archaeological survey and excavation, permit the

fifteen scientists represented here much greater precision in determining the timing of the depopulation, the number of people affected, and the ways in which northern Pueblo peoples coped--and failed to cope--with the rapidly changing environmental and demographic conditions they encountered throughout the 1200s. In addition, some of the scientists in this volume use models to provide insights into the processes behind the patterns they find, helping to narrow the range of plausible explanations. What emerges from these investigations is a highly pertinent story of conflict and disruption as a result of climate change, environmental degradation, social rigidity, and conflict. Taken as a whole, these contributions recognize this era as having witnessed a competition between differing social and economic organizations, in which selective migration was considerably hastened by severe climatic, environmental, and social upheaval. Moreover, the chapters show that it is at least as true that emigration led to the collapse of the northern Southwest as it is that collapse led to emigration.

Environmental Law in China Wang Xi, Lu Kun, 2017-06-20 Derived from the renowned multi-volume International Encyclopaedia of Laws, this book provides ready access to legislation and practice concerning the environment in China. A general introduction covers geographic considerations, political, social and cultural aspects of environmental study, the sources and principles of environmental law, environmental legislation, and the role of public authorities. The main body of the book deals first with laws aimed directly at protecting the environment from pollution in specific areas such as air, water, waste, soil, noise, and radiation. Then, a section on nature and conservation management covers protection of natural and cultural resources such as monuments, landscapes, parks and reserves, wildlife, agriculture, forests, fish, subsoil, and minerals. Further treatment includes the application of zoning and land-use planning, rules on liability, and administrative and judicial remedies to environmental issues. There is also an analysis of the impact of international and regional legislation and treaties on environmental regulation. Its succinct yet scholarly nature, as well as the practical quality of the information it provides, make this book a valuable resource for environmental lawyers handling cases affecting China. Academics and researchers, as well as business investors and the various international organizations in the field, will welcome this very useful guide, and will appreciate its value in the study of comparative environmental law and policy.

It also covers interrelated topics such as pesticide toxicity, legislation and regulation, handling, storage and safety aspects, IPM techniques, resistance management, interaction of pesticides with soil and the environment. Prisoners on Death Row Roger Smith, 2015-02-03 Capital punishment is one of the most divisive and emotional debates in the United States today. Both sides claim they are literally fighting for life--either the life of the condemned criminal or the lives of potential victims; and both sides claim to be upholding practices essential for a healthy society. This book presents an engaging and balanced account from a variety of perspectives on this most important issue: trends and statistics are here, but also the personal stories of convicts, victims, law officials, and activists. This book makes for fascinating, challenging, and informative reading.
