Meeting Critical Laboratory Needs for Animal Agriculture National Research Council, Division on Earth and Life Studies, Board on Life Sciences, Board on Agriculture and Natural Resources, Committee on an Analysis of the Requirements and Alternatives for Foreign Animal and Zoonotic Disease Research and Diagnostic Laboratory Capabilities, 2012-09-28 Outbreaks of animal disease can have catastrophic repercussions for animal agriculture, the food supply, and public health. Rapid detection, diagnosis and response, as well as development of new vaccines, are central to mitigating the impact of disease outbreaks. The proposed National Bio- and Agro-Defense Facility (NBAF) is a next-generation laboratory for animal disease diagnostics, training, and research that would provide core critical components for defense against foreign animal and zoonotic disease threats. But it will be a major investment with estimated construction costs of \$1.14 billion, as currently designed. **Meeting Critical Laboratory Needs for Animal Agriculture: Examination of Three Options** discusses the laboratory infrastructure needed to effectively address the threat posed by animal and zoonotic diseases and analyzes three options for creating this infrastructure: building NBAF as currently designed, building a scaled-back version of the NBAF, or maintaining current research capabilities at Plum Island Animal Disease Center while leveraging biosafety level-4 large animal capabilities at foreign laboratories.

Gastrointestinal Eponymic Signs Steven H. Yale,Halil Tekiner,Eileen S. Yale,Ryan C. Yale,2024-02-17
This book provides a novel method to teach eponymically named physical signs of the alimentary tract and intrabdominal organs. The focus is on the historical aspect of the named signs, how to perform the sign described by the author, and the pathophysiologic mechanisms involved in eliciting a positive test. The goal is to guide the reader to appreciate how these bedside signs provide a more profound understanding of the mechanism of disease. By doing so, they become more than simply rote memorization but an appreciation of how a direct hands-on assessment involving observing, engaging, listening, and touching the patient assists in diagnosis. Hence, these techniques provided the additional benefit of better connecting the practitioner to the patients and maintaining the art of medicine, which is rapidly losing its foothold within the medical community. This book will serve as a teaching tool for learners, teachers, and practicing physicians to preserve the art of the physical examination using a form of a case-based teaching and learning style approach. Illustrations throughout the text provide a visual representation of how to perform the sign. The authors believe this method of teaching and learning is more meaningful to the student in that they will be able to associate the name with the person's historical features, the sign, and its pathophysiologic mechanism(s). *Gastrointestinal Eponymic Signs* is a must-have resource for medical students, residents, fellows, teaching faculty, and any practicing physician seeking to understand how physical examination signs assist in diagnosis.
