Howl of the Carrion King James Jacobs,2009-04-28 The Legacy of Fire Adventure Path begins in the desert nation of Katapesh, where the heroes must attempt to retake a conquered town from a pack of fearsome gnolls. From there, the trail leads to the fortress known as the House of the Beast, an ancient map-world created by one of the most powerful wizards in history, and even the legendary City of Brass on the Plane of Fire.

100 Words To Make You Sound Smart American Heritage Dictionaries,2006-10-04 Find the right words to make a point, seal the deal, or just keep folks listening! Chosen by the editors of the American Heritage Dictionaries, these words can help anyone who wants to be a more compelling communicator—as a worker, consumer, advocate, friend, dinner companion, or even romantic prospect. The book includes a colorful variety of words, including handy words of just one syllable (such as glib) and words derived from the names of famous people (such as Freudian slip and Machiavellian). There are expressions from popular culture (Catch-22) and words that date back to classical civilization (spartan and stoic). Each word is clearly defined and shown in context with quotations from magazines, newspapers, broadcast media, movies, and television. For many words, quotations from distinguished authors and speakers are also given and word histories are explained. 100 Words to Make You Sound Smart provides an enjoyable way to communicate more effectively, distinctively, and articulately.

Classic Monsters Revisited James Jacobs,2008-03 Pathfinder and the Rise of the Runelords Adventure Path famously reimagined goblins, detailing their culture, mannerisms, and tactics in a way that made a boring old monster one of the most hotly discussed foes in fantasy roleplaying. Now, the minds that bring you Pathfinder have applied the same method to ten classic monsters, providing complete ecological discussions and adventure ideas involving orcs, ogres, goblins, hobgoblins, trolls, bugbears, and more in this lavishly illustrated, full-color overview that is both fun to read and fun to use at the gaming table.

Classic Horrors Revisited F. Wesley Schneider,2010-02-03 The most frightening terrors of fantasy gaming have deep roots in history, mythology, and popular culture. From the seductive allure of the vampire to the fierce fury of the werewolf, Classic Horrors Revisited spotlights 10 of the spookiest, scariest monsters of the game, providing context, rules, and a host of ideas that breathe new life (and sometimes unlife) into commonly used

creatures that all-too often can be uncommonly boring. Written by the macabre Managing Editor of the Pathfinder Adventure Paths, F. Wesley Schneider, Classic Horrors Revisited features exciting takes on the derro, flesh golem, gargoyle, ghost, ghoul, hag, mummy, vampire, werewolf, and zombie.

So Far from the Sea Eve Bunting,2009-06-29 Laura Iwasaki and her family are paying what may be their last visit to Laura's grandfather's grave. The grave is at Manzanar, where thousands of Americans of Japanese heritage were interned during World War II. Among those rounded up and taken to the internment camp were Laura's father, then a small boy, and his parents. Now Laura says goodbye to Grandfather in her own special way, with a gesture that crosses generational lines and bears witness to the patriotism that survived a shameful episode in America's history. Eve Bunting's poignant text and Chris K. Soentpiet's detailed, evocative paintings make the story of this family's visit to Manzanar, and of the memories stirred by the experience, one that will linger in readers' minds and hearts. Afterword.

Special Relativity and Motions Faster than Light Moses Fayngold,2008-09-08 While the theory of special relativity is often associated with the idea of traveling faster than light, this book shows that in all these cases subtle forces of nature conspire to prevent these motions being harnessed to send signals faster than the speed of light. The author tackles these topics both conceptually, with minimal or no mathematics, and quantitatively, making use of numerous illustrations to clarify the discussion. The result is a joy to read for both scientists familiar with the subject and laypeople wishing to understand something of special relativity.

Theoretical Optics Hartmann Römer,2006-03-06 Starting from basic electrodynamics, this volume provides a solid, yet concise introduction to theoretical optics, containing topics such as nonlinear optics, light-matter interaction, and modern topics in quantum optics, including entanglement, cryptography, and quantum computation. The author, with many years of experience in teaching and research, goes way beyond the scope of traditional lectures, enabling readers to keep up with the current state of knowledge. Both content and presentation make it essential reading for graduate and phD students as well as a valuable reference for researchers.

Mathematical Models of Fluiddynamics Rainer Ansorge,2006-03-06 This introduction to the field contains a careful selection of topics and examples without sacrificing scientific strictness. The author guides readers through mathematical modelling, the theoretical treatment of the underlying physical laws and the construction and effective use of numerical procedures to describe the behaviour of the dynamics of physical flow. Both students and experts intending to control or predict the behavior of fluid flows by theoretical and computational fluid

dynamics will benefit from the combination of all relevant aspects in one handy volume. The book consists of three main parts: - The design of mathematical models of physical fluid flow; - A theoretical treatment of the equations representing the model, as Navier-Stokes, Euler, and boundary layer equations, models of turbulence, in order to gain qualitative as well as quantitative insights into the processes of flow events; - The construction and effective use of numerical procedures in order to find quantitative descriptions of concrete physical or technical fluid flow situations. This is the first text of its kind to merge all these subjects so thoroughly.

  School Didactics And Learning Michael Uljens,2004-08-02 In this book a new theory on instruction is presented - a reflective theory of school didactics - uniquely incorporating continental German and Nordic research traditions in the theory of didactics (Didaktik), together with Anglo-American research on teaching (instructional research) and cognitivist theory. School didactics is defined as a field of research within general education. This field is limited to research and theory aiming at understanding the pedagogical practice which takes place in institutionalized educational settings guided by a curriculum collectively agreed upon. As the theory is designed to be valid for institutionalized education framed by a politically accepted curriculum, it is a culturally seen regional theory of education, not a universal one. According to this school theory the fundamental features of an institutionalized pedagogical process consist in the intentional, interactional, teaching-studying-learning process that is culturally and historically developed and situated. However, the present model does not explicitly formulate goals nor the means of educational practice. Rather, the model emphasizes the teacher and student as reflective and intentional subjects where the teacher is acting as the representative of the collective but also as the learners' advocate. Because of this the theory presented is not a normative or prescriptive theory, instead it is a reflective theory.
