The Year's Best Science Fiction: Nineteenth Annual Collection Gardner Dozois,2002-07-23 The twenty-first century has so far proven to be exciting and wondrous and filled with challenges we

had never dreamed. New possibilities previously unimagined appear almost daily . . . and science fiction stories continue to explore those possibilities with delightful results: Collected in this anthology are such compelling stories as: On K2 with Kanakaredes by Dan Simmons. A relentlessly paced and absorbing tale set in the near future about three mountain climbers who must scale the face of K2 with some very odd company. The Human Front by Ken MacLeod. In this compassionate coming-of-age tale the details of life are just a bit off from things as we know them-and nothing is as it appears to be. Glacial by Alastair Reynolds. A fascinating discovery on a distant planet leads to mass death and a wrenching mystery as spellbinding as anything in recent short fiction. The twenty-six stories in this collection imaginatively takes us far across the universe, into the very core of our beings, to the realm of the gods, and the moment just after now. Included here are the works of masters of the form and of bright new talents, including: Eleanor Arnason Chris Beckett Michael Blumlein Michael Cassutt Brenda W. Clough Paul Di Filippo Andy Duncan Carolyn Ives Gilman Jim Grimsley Simon Ings James Patrick Kelly Leigh Kennedy Nancy Kress Ian R. MacLeod Ken MacLeod Paul J. McAuley Maureen F. McHugh Robert Reed Alastair Reynolds Geoff Ryman William Sanders Dan Simmons Allen M. Steele Charles Stross Michael Swanwick Howard Waldrop Supplementing the stories are the editor's insightful summation of the year's events and a lengthy list of honorable mentions, making this book a valuable resource in addition to serving as the single best place in the universe to find stories that stir the imagination and the heart.

Programming in Python 3 Mark Summerfield,2008-12-16
Python 3 is the best version of the language yet: It is more
powerful, convenient, consistent, and expressive than ever before.
Now, leading Python programmer Mark Summerfield
demonstrates how to write code that takes full advantage of
Python 3's features and idioms. The first book written from a
completely "Python 3" viewpoint, Programming in Python 3
brings together all the knowledge you need to write any program,
use any standard or third-party Python 3 library, and create new
library modules of your own. Summerfield draws on his many
years of Python experience to share deep insights into Python 3
development you won't find anywhere else. He begins by
illuminating Python's "beautiful heart": the eight key elements of
Python you need to write robust, high-performance programs.
Building on these core elements, he introduces new topics
designed to strengthen your practical expertise—one concept and
hands-on example at a time. This book's coverage includes
Developing in Python using procedural, object-oriented, and
functional programming paradigms Creating custom packages
and modules Writing and reading binary, text, and XML files,
including optional compression, random access, and text and
XML parsing Leveraging advanced data types, collections, control
structures, and functions Spreading program workloads across
multiple processes and threads Programming SQL databases and
key-value DBM files Utilizing Python's regular expression mini-
language and module Building usable, efficient, GUI-based
applications Advanced programming techniques, including
generators, function and class decorators, context managers,
descriptors, abstract base classes, metaclasses, and more
Programming in Python 3 serves as both tutorial and language
reference, and it is accompanied by extensive downloadable
example code—all of it tested with the final version of Python 3 on
Windows, Linux, and Mac OS X.

The authors are professional penetration testers who have been involved in web application security for nearly a decade.
