**In an Uncertain World** Robert Rubin, Jacob Weisberg, 2004-09-07 Robert Rubin was sworn in as the seventieth U.S. Secretary of the Treasury in January 1995 in a brisk ceremony attended only by his wife and a few colleagues. As soon as the ceremony was over, he began an emergency meeting with President Bill Clinton on the financial crisis in Mexico. This was not only a harbinger of things to come during what would prove to be a rocky period in the global economy; it also captured the essence of Rubin himself--short on formality, quick to get into the nitty-gritty. From his early years in the storied arbitrage department at Goldman Sachs to his current position as chairman of the executive committee of Citigroup, Robert Rubin has been a major figure at the center of the American financial system. He was a key player in the longest economic expansion in U.S. history. With *In an Uncertain World*, Rubin offers a shrewd, keen analysis of some of the most important events in recent American history and presents a clear, consistent approach to thinking about markets and dealing with the new risks of the global economy. Rubin's fundamental philosophy is that nothing is provably certain. Probabilistic thinking has guided his career in both business and government. We see that discipline at work in meetings with President Clinton and Hillary Clinton, Chinese premier Zhu Rongji, Alan Greenspan, Lawrence Summers, Newt Gingrich, Sanford Weill, and the late Daniel Patrick Moynihan. We see Rubin apply it time and again while facing financial crises in Asia, Russia, and Brazil; the federal government shutdown; the rise and fall of the stock market; the challenges of the post-September 11 world; the ongoing struggle over fiscal policy; and many other momentous economic and political events. With a compelling and candid voice and a sharp eye for detail, Rubin portrays the daily life of the White House--confronting matters both mighty and mundane--as astutely as he examines the challenges that lie ahead for the nation. Part political memoir, part prescriptive economic analysis, and part personal look at business problems, *In an Uncertain World* is a deep examination of Washington and Wall Street by a figure who for three decades has been at the center of both worlds.

How to Pass OSCP Series: Windows Privilege Escalation Step-By-Step Guide Alan Wang, 2020-11-13 This book is the first of a series of How To Pass OSCP books and focus on techniques used in Windows Privilege Escalation. This is a step-by-step guide that walks you through the whole process of how to escalate privilege in Windows environment using many common techniques. We start by gathering as much information about the target as possible either manually or using automated scripts. Next, we search for misconfigured services or scheduled tasks, insufficient file permission on binaries or services, vulnerable kernel, vulnerable software running with high privileges, sensitive information stored on local files, credential saved in the memory, registry settings that always elevate privileges before executing a binary, hard-coded credential contained in the application configuration files, and many more. Rampage Nation Louis Klarevas, 2016-08-23 In the past decade, no individual act of violence has killed more people in the United States than the mass shooting. This well-researched, forcefully argued book answers some of the most pressing questions facing our society: Why do people go on killing sprees? Are gun-free zones magnets for deadly rampages? What can we do to curb the carnage of this disturbing form of firearm violence? Contrary to conventional wisdom, the author shows that gun possession often prods aggrieved, mentally unstable individuals to go on shooting sprees; these attacks largely occur in places where guns are not prohibited by law; and sensible gun-control measures like the federal Assault Weapons Ban—which helped drastically reduce rampage violence when it was in effect—are instrumental to keeping Americans safe from mass shootings in the future. To stem gun massacres, the author proposes several original policy prescriptions, ranging from the enactment of sensible firearm safety reforms to an overhaul of how the justice system investigates potential active-shooter threats and prosecutes violent crimes. Calling attention to the growing problem of mass shootings, *Rampage Nation* demonstrates that this unique form of gun violence is more than just a criminal justice offense or public health scourge. It is a threat to American security.

**Conflict Landscapes: An Archaeology of the International Brigades in the Spanish Civil War** Salvatore Garfi, 2019-08-31 This volume is an archaeological exploration of the conflict landscapes encountered by volunteers of the International Brigades in the Spanish Civil War (1936-39). This research draws, not only on the techniques of landscape archaeology, but also on the writings of international volunteers in Spain – in particular, George Orwell.

Moon-face and Other Stories Jack London, 1906 JACK LONDON (1876-1916), American novelist, born in San Francisco, the son of an itinerant astrologer and a spiritualist mother. He grew up in poverty, scratching a living in various legal and illegal ways -robbing the oyster beds, working in a canning factory and a jute mill, serving aged 17 as a common sailor, and taking part in the Klondike gold rush of 1897. This various experience provided the material for his works, and made him a socialist. The son of the Wolf (1900), the first of his collections of tales, is based upon life in the Far North, as is the book that brought him recognition, The Call of the Wild (1903), which tells the story of the dog Buck, who, after his master's death, is lured back to the primitive world to lead a wolf pack. Many other tales of struggle, travel, and adventure followed, including The Sea-Wolf (1904), White Fang (1906), South Sea Tales (1911), and Jerry of the South Seas (1917). One of London's most interesting novels is the semi-autobiographical Martin Eden (1909). He also wrote socialist treatises, autobiographical essays, and a good deal of journalism.

**Turing** B. Jack Copeland, 2014 Alan Turing is regarded as one of the greatest scientists of the 20th century. But who was Turing, and what did he achieve during his

tragically short life of 41 years? Best known as the genius who broke Germany's most secret codes during the war of 1939-45, Turing was also the father of the modern computer. Today, all who 'click-to-open' are familiar with the impact of Turing's ideas. Here, B. Jack Copeland provides an account of Turing's life and work, exploring the key elements of his life-story in tandem with his leading ideas and contributions. The book highlights Turing's contributions to computing and to computer science, including Artificial Intelligence and Artificial Life, and the emphasis throughout is on the relevance of his work to modern developments. The story of his contributions to codebreaking during the Second World War is set in the context of his thinking about machines, as is the account of his work in the foundations of mathematics.

**Turing and the Universal Machine (Icon Science)** Jon Agar,2017-09-07 The history of the computer is entwined with that of the modern world and most famously with the life of one man, Alan Turing. How did this device, which first appeared a mere 50 years ago, come to structure and dominate our lives so totally? An enlightening mini-biography of a brilliant but troubled man.

*Turing's Vision* Chris Bernhardt,2016-05-13 In 1936, when he was just twenty-four years old, Alan Turing wrote a remarkable paper in which he outlined the theory of computation, laying out the ideas that underlie all modern computers. This groundbreaking and powerful theory now forms the basis of computer science. In Turing's Vision, Chris Bernhardt explains the theory, Turing's most important contribution, for the general reader. Bernhardt argues that the strength of Turing's theory is its simplicity, and that, explained in a straightforward manner, it is eminently understandable by the nonspecialist. As Marvin Minsky writes, The sheer simplicity of the theory's foundation and extraordinary short path from this foundation to its logical and surprising conclusions give the theory a mathematical beauty that alone guarantees it a permanent place in computer theory. Bernhardt begins with the foundation and systematically builds to the surprising conclusions. He also views Turing's theory in the context of mathematical history, other views of computation (including those of Alonzo Church), Turing's later work, and the birth of the modern computer. In the paper, On Computable Numbers, with an Application to the Entscheidungsproblem, Turing thinks carefully about how humans perform computation, breaking it down into a sequence of steps, and then constructs theoretical machines capable of performing each step. Turing wanted to show that there were problems that were beyond any computer's ability to solve; in particular, he wanted to find a decision problem that he could prove was undecidable. To explain Turing's ideas, Bernhardt examines three well-known decision problems to explore the concept of undecidability; investigates theoretical computing machines, including Turing machines; explains universal machines; and proves that certain problems are undecidable, including Turing's problem concerning computable numbers.

**Archaeologies of Conflict** John Carman,2013-02-14 The development of key methodologies for the study of battlefields in the USA in the 1980s inspired a generation of British and European archaeologists to turn their attention to sites in their own countries. The end of the Cold War and key anniversaries of the World Wars inspired others, especially in the UK, to examine the material legacy of those conflicts before they disappeared. By 2000 the study of war was again firmly on the archaeological agenda. The overall purpose of the book is to encourage proponents and practitioners of Conflict Archaeology to consider what it is for and how to develop it in the future. The central argument is that, at present, Conflict Archaeology is effectively divided into closed communities who do not interact to any large extent. These separate communities are divided by period and by nationality, so that a truly international Conflict Archaeology has yet to emerge. These divisions prevent the exchange of information and ideas across boundaries and thereby limit the scope of the field. This book discusses these issues in detail, clearly outlining how they affect the development of Conflict Archaeology as a coherent branch of archaeology.

*Alan Turing's Systems of Logic* Andrew W. Appel,2014-11-16 A facsimile edition of Alan Turing's influential Princeton thesis Between inventing the concept of a universal computer in 1936 and breaking the German Enigma code during World War II, Alan Turing (1912–1954), the British founder of computer science and artificial intelligence, came to Princeton University to study mathematical logic. Some of the greatest logicians in the world—including Alonzo Church, Kurt Gödel, John von Neumann, and Stephen Kleene—were at Princeton in the 1930s, and they were working on ideas that would lay the groundwork for what would become known as computer science. This book presents a facsimile of the original typescript of Turing's fascinating and influential 1938 Princeton PhD thesis, one of the key documents in the history of mathematics and computer science. The book also features essays by Andrew Appel and Solomon Feferman that explain the still-unfolding significance of the ideas Turing developed at Princeton. A work of philosophy as well as mathematics, Turing's thesis envisions a practical goal—a logical system to formalize mathematical proofs so they can be checked mechanically. If every step of a theorem could be verified mechanically, the burden on intuition would be limited to the axioms. Turing's point, as Appel writes, is that mathematical reasoning can be done, and should be done, in mechanizable formal logic. Turing's vision of constructive systems of logic for practical use has become reality: in the twenty-first century, automated formal methods are now routine. Presented here in its original form, this fascinating thesis is one of the key documents in the history of mathematics and computer science.

**A.M. Turing's ACE Report of 1946 and Other Papers** B. E. Carpenter,R. W. Doran,1986 Volume 10 in the Babbage Reprint Series contains two archival papers by Alan Turing-the ACE report (1945), a seminal paper detailing the design for an electronic universal machine called the Automatic Computing Engine (ACE), and Turing's

Lecture to the London Mathematical Society (1947) amplifying the ideas outlined in the ACE report. Turing's report was the first time that the notion of artificial intelligence was discussed as a real possibility and Turing went on to devote the next decade to AI. Michael Woodger's paper, The History and Present Use of Digital Computers at the National Physical Laboratory (1958) gives a brief history of the construction of the pilot ACE, the first functional version of Turing's universal machine.

**The Turing Test** James H. Moor,2012-12-06 This book gives the most comprehensive, in depth and contemporary assessment of this classic topic in artificial intelligence. It is the first to elaborate in such detail the numerous conflicting points of view on many aspects of this multifaceted, controversial subject. It offers new insights into Turing's own interpretation and is essential reading for research on the Turing test and for teaching undergraduate and graduate students in philosophy, computer science, and cognitive science.
