Renewable Energy in the GCC Countries Imern Jeridi Bachellerie,2012 The aim of this book is to help identify the potential role that renewable energy sources (RES) can play in the future energy mix of the GCC countries; it looks closely at the major past and present renewable energy initiatives and policies, as well as industrial and research capabilities in the region, with a specific focus on solar and wind energy technologies. In doing so, this study examines the drivers and requirements for the deployment of these energy sources and their possible integration into sectors as different as electricity generation, water desalination or green building. Illustrated by a wealth of practical cases and studies, and aspiring to be used as a reference book, this study aims to help researchers comprehend the overall capabilities and achievements of the GCC countries in the renewable energy field, so that perspectives on the region's strategic energy issues are objective and sustainable models are encouraged. Even when topics beyond their fields are discussed, researchers from many diverse fields will find the style to be accessible, while information remains detailed and 'technical'. The book's multidisciplinary approach gives voice to all stakeholders without judgment or partisanship, leaving the reader free to form his or her own opinion about the challenges that are at stake, and decide the course of action that is required by the current situation.

Crisis Communications Kathleen Fearn-Banks,2002 A casebook approach to studying crisis communications means learning from the actions of those who have experienced crises. What did they expect? What actually happened? Were they prepared? What were their strategies? What were their challenges, pressures, and problems? Were the news media adversarial or supportive? If they had to do it again, what would they do differently? These and other questions are answered in the case studies of this second edition. Presenting organizational and individual problems that may become crises and the communication responses to these situations, this revision of Fearn-Banks' very successful text: * presents crisis communication theory, including a critique of the communications of White Star Lines after its Titanic sank on its maiden voyage; * describes ways of determining the most likely and most damaging crises that may strike an organization; * centers on causes of crisis--rumor, gotcha television news and the non-expert expert, and crises caused by the news media; * gets into the 21st century and cyberspace-caused crises, including mini-cases of rogue Web sites and e-mail rumors; * explains how to communicate with the news media, lawyers, internal publics or audiences, and external publics; and * includes narrated case studies illustrating how spokespersons and managers used communication in several kinds of crises. The text is supplemented by a workbook, enabling students to test their knowledge and develop their skills. Written as a primer for crisis communications, public relations, and communications management, *Crisis Communications* serves as an essential resource in the practice of public relations and corporate communications.
