**Niche Envy** Joseph Turow,2008-02-15 The price we pay for the new strategies in database marketing that closely track desirable customers, offering them benefits in return for personal information. We have all been to Web sites that welcome us by name, offering us discounts, deals, or special access to content. For the most part, it feels good to be wanted—to be valued as a customer. But if we thought about it, we might realize that we've paid for this special status by turning over personal information to a company's database. And we might wonder whether other customers get the same deals we get, or something even better. We might even feel stirrings of resentment toward customers more valued than we are. In *Niche Envy*, Joseph Turow examines the emergence of databases as marketing tools and the implications this may have for media, advertising, and society. If the new goal of marketing is to customize commercial announcements according to a buyer's preferences and spending history—or even by race, gender, and political opinions—what does this mean for the twentieth-century tradition of equal access to product information, and how does it affect civic life? Turow shows that these marketing techniques are not wholly new; they have roots in direct marketing and product placement, widely used decades ago and recently revived and reimagined by advertisers as part of customer relationship management (known popularly as CRM). He traces the transformation of marketing techniques online, on television, and in retail stores. And he describes public reaction against database marketing—pop-up blockers, spam filters, commercial-skipping video recorders, and other ad-evasion methods. Polls show that the public is nervous about giving up personal data. Meanwhile, companies try to persuade the most desirable customers to trust them with their information in return for benefits. *Niche Envy* tracks the marketing logic that got us to this uneasy impasse.

Schindler James Steele,2005 Maverick of mid-century American architecture Each of my buildings deal with a different architectural problem, the existence of which has been forgotten in this period of Rational Mechanization. The question of whether a house is really a house is more important to me, than the fact that it is made of steel, glass, putty or hot air. - R. M. Schindler Hailing from Vienna, Rudolph Michael Schindler (1887-1953), like his colleague Richard Neutra, emigrated to the US and applied his International Style techniques to the movement that would come to be known as California Modernism. Influenced by the work of Frank Lloyd Wright and taking cues from spatial notions found in cubism, he developed a singular style characterized by geometrical shapes, bold lines, and association of materials such as wood and concrete, as seen in his own Hollywood home (built in 1921-22) and the house he designed for P.M. Lovell in Newport Beach (1923-24). About the Series: Each book in TASCHEN's Basic Architecture Series features: an introduction to the life and work of the architect the major works in chronological order information about the clients, architectural preconditions as well as construction problems and resolutions a list of all the selected works and a map indicating the locations of the best and most famous buildings approximately 120 illustrations (photographs, sketches, drafts and plans)

*World Development Report 2020* World Bank,2019-11-19 Global value chains (GVCs) powered the surge of international trade after 1990 and now account for almost half of all trade. This shift enabled an unprecedented economic convergence: poor countries grew rapidly and began to catch up with richer countries. Since the 2008 global financial crisis, however, the growth of trade has been sluggish and the expansion of GVCs has stalled. Meanwhile, serious threats have emerged to the model of trade-led growth. New technologies could draw production closer to the consumer and reduce the demand for labor. And trade conflicts among large countries could lead to a retrenchment or a segmentation of GVCs. *World Development Report 2020: Trading for Development in the Age of Global Value Chains* examines whether there is still a path to development through GVCs and trade. It concludes that technological change is, at this stage, more a boon than a curse. GVCs can continue to boost growth, create better jobs, and reduce poverty provided that developing countries implement deeper reforms to promote GVC participation; industrial countries pursue open, predictable policies; and all countries revive multilateral cooperation.

*Shaping an Inclusive Energy Transition* Margot P. C. Weijnen,Zofia Lukszo,Samira Farahani,2021-06-24 This open access book makes a case for a socially inclusive energy transition and illustrates how engineering and public policy professionals can contribute to shaping an inclusive energy transition, building on a socio-technical systems engineering approach. Accomplishing a net-zero greenhouse gas emissions economy in 2050 is a daunting challenge. This book explores the challenges of the energy transition from the perspectives of technological innovation, public policy, social values and ethics. It elaborates on two particular gaps in the design of public policy interventions focused on decarbonization of the energy system and discusses how both could be remedied. First, the siloed organization of public administration fails to account for the many interdependencies between the energy sector, the mobility system, digital infrastructure and the built environment. Cross-sector coordination of policies and policy instruments is needed to avoid potentially adverse effects upon society and the economy, which may hamper the energy transition rather than accelerate it. Second, energy and climate policies pay insufficient attention to the social values at stake in the energy transition. In addressing these gaps, this book intends to inspire decision makers engaged in the energy transition to embrace the transition as an opportunity to bring a more inclusive society into being.

*Pandemic Disease in the Medieval World* Monica Helen Green,2015 The plague organism (Yersinia pestis) killed an estimated 40% to 60% of all people when it spread rapidly through the Middle East, North Africa, and Europe in the fourteenth century: an event known as the Black Death. Previous research has shown, especially for Western Europe, how population losses then led to structural economic, political, and social changes. But why and how did the pandemic happen in the first place? When and where did it begin? How was it sustained? What was its full geographic extent? And when did it really end?
