**Foundations for Young Adult Success** Jenny Nagaoka,Camille A. Farrington,Stacy B. Ehrlich,Ryan D. Heath,2015-06-23 Amid growing recognition that strong academic skills alone are not enough for young people to become successful adults, this comprehensive report offers wide-ranging evidence to show what young people need to develop from preschool to young adulthood to succeed in college and career, have healthy relationships, be engaged citizens, and make wise choices. It concludes that rich experiences combining action and reflection help children develop a set of critical skills, attitudes, and behaviors. And it suggests that policies should aim to ensure that all children have consistent, supportive relationships and an abundance of these developmental experiences through activities inside and outside of school.

**Transition Strategies for Sustainable Community Systems** Amar KJR Nayak,2019-01-23 This book presents five critical dimensions on relationships, institutions, production, organisation, and governance from design and systems perspectives for the systematic transition of unstable and vulnerable communities across the world to sustainable community systems. • The first section discusses features of relationships and processes to deepen cooperation and trust within a community. • The second section examines institutions within and outside a district to foster synergy across institutions within a district and to minimise negative externalities on local communities within a district. • The third section deals with food production systems that are nature-friendly, resilient, efficient and sustainable. • The fourth section discusses the design of producer organisations that can graduate to become sustainable community enterprise systems. • The fifth section focuses on community governance that can facilitate decentralised, participatory, transparent and democratic local governance systems. This book • offers a fresh perspective on design thinking for optimising internal design consistencies. • provides a systems perspective on building sustainable community systems at the lowest governance unit in different countries, such as Ward/Gram Panchayat/Panchayat Council/Gewong/Union Council/GN. • gives insights into design & systems perspectives towards building sustainable community systems within a district of any country across the world.

**Social Determinants of Indigenous Health** Bronwyn Carson,Terry Dunbar,Richard D Chenhall,Ross Bailie,2020-07-16 The opportunities and comfortable lifestyle available to most Australians have been denied to generations of Indigenous people. As a result some of Australia's original inhabitants suffer from what has been described as 'Fourth World' standards of health. This is out of place in a country that prides itself on egalitarianism and a fair go for all. Shifting the focus from individual behaviour, to the social and political circumstances that influence people's lives and ultimately their health, helps us to understand the origins of poor health. It can also guide action to bring about change. Social Determinants of Indigenous Health offers a systematic overview of the relationship between the social and political environment and health. Highly respected contributors from around Australia examine the long-term health impacts of the Indigenous experience of dispossession, colonial rule and racism. They also explore the role of factors such as poverty, class, community and social capital, education, employment and housing. They scrutinise the social dynamics of making policy for Indigenous Australians, and the interrelation between human rights and health. Finally, they outline a framework for effective health interventions, which take social factors into consideration. This is a groundbreaking work, developed in consultation with Indigenous health professionals and researchers. It is essential reading for anyone working in Indigenous health.

**Contracts for Infrastructure Projects** Philip Loots, Donald Charrett, 2022-05-18 Contracts for Infrastructure Projects: An International Guide provides a guide to the law relating to construction contracts for infrastructure projects; it is intended for the use of engineers and other professionals who are involved in the negotiation and administration of construction contracts, to enable them to understand the risks involved, and how to minimise them. The principles of construction law outlined in this book apply to small construction contracts as well as very large contracts for which the contract sum may be in the billions of dollars. The focus of the book is on construction contracts entered into by commercial organisations operating in a business environment. Contract law generally assumes that such parties are of equal bargaining power and puts relatively few fetters on their ability to agree on the terms of their bargain. However, where legislation impacts on the execution of construction projects or the operation of construction contracts it may be of major importance in protecting the rights of weaker parties or third parties. It is assumed that the users of this book will be familiar with the general concepts of tendering and contracting for engineering and construction projects but may not have any formal knowledge of the law. To the extent possible, the emphasis is on general principles of contract law that are widely accepted in many jurisdictions. Examples are drawn from case law in a number of common law jurisdictions, as well as from civil codes.

**Data Mining for Intelligence, Fraud & Criminal Detection** Christopher Westphal, 2008-12-22 In 2004, the Government Accountability Office provided a report detailing approximately 200 government-based data-mining projects. While there is comfort in knowing that there are many effective systems, that comfort isn't worth much unless we can determine that these systems are being effectively and responsibly employed. Written by one of the most respected consultants in the area of data mining and security, Data Mining for Intelligence, Fraud & Criminal Detection: Advanced Analytics & Information Sharing Technologies reviews the tangible results produced by these systems and evaluates their effectiveness. While CSI-type shows may depict information sharing and analysis that are accomplished with the push of a button, this sort of proficiency is more fiction than reality. Going beyond a discussion of the various technologies, the author outlines the issues of information sharing and the effective interpretation of results, which are critical to any integrated homeland security effort. Organized into three main sections, the book fully examines and outlines the future of this field with an insider's perspective and a visionary's insight. Section 1 provides a fundamental understanding of the types of data that can be used in current systems. It covers approaches to analyzing data and clearly delineates how to connect the dots among different data elements Section 2 provides real-world examples derived from actual operational systems to show how data is used, manipulated, and interpreted in domains involving human smuggling, money laundering, narcotics trafficking, and corporate fraud Section 3 provides an overview of the many information-sharing systems, organizations, and task forces as well as data interchange formats. It also discusses optimal information-sharing and analytical architectures Currently, there is very little published literature that truly defines real-world systems. Although politics and other factors all play into how much one agency is willing to support the sharing of its resources, many now embrace the wisdom of that path. This book will provide those individuals with an understanding of what approaches are currently available and how they can be most effectively employed.

**Multicomponent Polymeric Materials** Jin Kuk Kim, Sabu Thomas, Prosenjit Saha, 2016-08-26 The book offers an in-depth review of the materials design and manufacturing processes employed in the development of multi-component or multiphase polymer material systems. This field has seen rapid growth in both academic and industrial research, as multiphase materials are increasingly replacing traditional single-component materials in commercial applications. Many obstacles can be overcome by processing and using multiphase materials in automobile, construction, aerospace, food processing, and other chemical industry applications. The comprehensive description of the processing, characterization, and application of multiphase materials presented in this book offers a world of new ideas and potential technological advantages for academics, researchers, students, and industrial manufacturers from diverse fields including rubber engineering, polymer chemistry, materials processing and chemical science. From the commercial point of view it will be of great value to those involved in processing, optimizing and manufacturing new materials for novel end-use applications. The book takes a detailed approach to the description of process parameters, process optimization, mold design, and other core manufacturing information. Details of injection, extrusion, and compression molding processes have been provided based on the most recent advances in the field. Over two comprehensive sections the book covers the entire field of multiphase polymer materials, from a detailed description of material design and processing to the cutting-edge applications of such multiphase materials. It provides both precise guidelines and general concepts for the present and future leaders in academic and industrial sectors.
