Cybersecurity Framework Manufacturing Profile National Institute of Standards, 2017-05-31 March 2017 If you like this book (or the Kindle version), please leave positive review. This document provides the Cybersecurity Framework implementation details developed for the manufacturing environment. The Manufacturing Profile of the Cybersecurity Framework can be used as a roadmap for reducing cybersecurity risk for manufacturers that is aligned with manufacturing sector goals and industry best practices. The Profile gives manufacturers: * A method to identify opportunities for improving the current cybersecurity posture of the manufacturing system * An evaluation of their ability to operate the control environment at their acceptable risk level * A standardized approach to preparing the cybersecurity plan for ongoing assurance of the manufacturing system's security Why buy a book you can download for free? First you gotta find it and make sure it's the latest version (not always easy). Then you gotta print it using a network printer you share with 100 other people - and its

outta paper - and the toner is low (take out the toner cartridge, shake it, then put it back). If it's just 10 pages, no problem, but if it's a 250-page book, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. An engineer that's paid \$75 an hour has to do this himself (who has assistant's anymore?). If you are paid more than \$10 an hour and use an ink jet printer, buying this book will save you money. It's much more cost-effective to just order the latest version from Amazon.com This book is published by 4th Watch Books and includes copyright material. We publish compact, tightly-bound, full-size books (8 1/2 by 11 inches), with glossy covers. 4th Watch Books is a Service Disabled Veteran-Owned Small Business (SDVOSB), and is not affiliated with the National Institute of Standards and Technology. GeoSpatial Visual Analytics Raffaele de
Amicis, R. Stojanovic, Giuseppe Conti, 2009-07-11
Access, distribution and processing of Geographic
Information (GI) are basic preconditions to
support strategic environmental decision-making.
The heterogeneity of information on the
environment today available is driving a wide
number of initiatives, on both sides of the
Atlantic, all advocating both the strategic role
of proper management and processing of environme-
nt-related data as well as the importance of
harmonized IT infrastructures designed to better
monitor and manage the environment. The extremely
wide range of often multidimensional environmental
information made available at the global scale
poses a great challenge to technologists and
scientists to find extremely sophisticated yet
effective ways to provide access to relevant data
patterns within such a vast and highly dynamic
information flow. In the past years the domain of
3D scientific visualization has developed several
solutions designed for operators requiring to
access results of a simulation through the use of
3D visualization that could support the
understanding of an evolving phenomenon. However
3D data visualization alone does not provide model
and hypothesis-making neither it provide tools to
validate results. In order overcome this
shortcoming, in recent years scientists have
developed a discipline that combines the benefits
of data mining and information visualization,
which is often referred to as Visual Analytics
(VA).

Electronic Evidence and Electronic Signatures

Stephen Mason (Barrister), Daniel Seng, 2021

Brain Art Anton Nijholt, 2019-05-25 This is the first book on brain-computer interfaces (BCI) that aims to explain how these BCI interfaces can be used for artistic goals. Devices that measure changes in brain activity in various regions of our brain are available and they make it possible to investigate how brain activity is related to experiencing and creating art. Brain activity can also be monitored in order to find out about the affective state of a performer or bystander and use this knowledge to create or adapt an interactive multi-sensorial (audio, visual, tactile) piece of art. Making use of the measured affective state is just one of the possible ways to use BCI for artistic expression. We can also stimulate brain activity. It can be evoked externally by exposing our brain to external events, whether they are visual, auditory, or tactile. Knowing about the stimuli and the effect on the brain makes it possible to translate such external stimuli to decisions and commands that help to design, implement, or adapt an artistic performance, or interactive installation. Stimulating brain activity can also be done internally. Brain activity can be voluntarily manipulated and changes can be translated into computer commands to realize an artistic vision. The chapters in this book have been written by researchers in human-computer interaction, brain-computer interaction, neuroscience, psychology and social sciences, often in cooperation with artists

using BCI in their work. It is the perfect book for those seeking to learn about brain-computer interfaces used for artistic applications.

In Silico Drug Design Kunal Roy, 2019-02-12 In In Silico Drug Design: Repurposing Techniques and Methodologies explores the application of computational tools that can be utilized for this approach. The book covers theoretical background and methodologies of chem-bioinformatic techniques and network modeling and discusses the various applied strategies to systematically retrieve, integrate and analyze datasets from diverse sources. Other topics include in silico drug design methods, computational workflows for drug repurposing, and network-based in silico screening for drug efficacy. With contributions from experts in the field and the inclusion of practical case studies, this book gives scientists, researchers and R&D professionals in the pharmaceutical industry valuable insights into drug design. Discusses the theoretical background and methodologies of useful techniques of cheminformatics and bioinformatics that can be applied for drug repurposing Offers case studies relating to the in silico modeling of FDA-approved drugs for the discovery of antifungal, anticancer, antiplatelet agents, and for drug therapies against diseases Covers tools and databases that can be utilized to facilitate in silico methods for drug repurposing

A Design Methodology for Computer Security Testing Marco Ramilli, 2013-07-18 The book collects 3 years of researches in the penetration testing

security field. It does not describe underground or fancy techniques, it is most focused on the state of the art in penetration testing methodologies. In other words, if you need to test a system, how do you do ? What is the first step ? What tools can be used ? what is the path to follow in order to find flaws ? The book shows many real world examples on how the described methodology has been used. For example: penetration testing on electronic voting machines, how malware did use the describe methodology to bypass common security mechanisms and attacks to reputation systems.

Quality Estimation for Machine Translation Lucia Specia, Carolina Scarton, Gustavo Henrique Paetzold, 2022-05-31 Many applications within natural language processing involve performing text-to-text transformations, i.e., given a text in natural language as input, systems are required to produce a version of this text (e.g., a translation), also in natural language, as output. Automatically evaluating the output of such systems is an important component in developing text-to-text applications. Two approaches have

been proposed for this problem: (i) to compare the system outputs against one or more reference outputs using string matching-based evaluation metrics and (ii) to build models based on human feedback to predict the quality of system outputs without reference texts. Despite their popularity, reference-based evaluation metrics are faced with the challenge that multiple good (and bad) quality outputs can be produced by text-to-text approaches for the same input. This variation is very hard to capture, even with multiple reference texts. In addition, reference-based metrics cannot be used in production (e.g., online machine translation systems), when systems are expected to produce outputs for any unseen input. In this book, we focus on the second set of metrics, so-called Quality Estimation (QE) metrics, where the goal is to provide an estimate on how good or reliable the texts produced by an application are without access to gold-standard outputs. QE enables different types of evaluation that can target different types of users and applications. Machine learning techniques are used to build QE models with various types of quality labels and explicit features or learnt representations, which can then predict the quality of unseen system outputs. This book describes the topic of QE for text-to-text applications, covering quality labels, features, algorithms, evaluation, uses, and state-of-the-art approaches. It focuses on machine translation as application, since this represents most of the QE work done to date. It also briefly describes QE for several other applications, including text simplification, text summarization, grammatical error correction, and natural language generation.

Translation Quality Assessment Joss

Moorkens, Sheila Castilho, Federico Gaspari, Stephen Doherty, 2018-07-13 This is the first volume that brings together research and practice from academic and industry settings and a combination

of human and machine translation evaluation. Its comprehensive collection of papers by leading experts in human and machine translation quality and evaluation who situate current developments and chart future trends fills a clear gap in the literature. This is critical to the successful integration of translation technologies in the industry today, where the lines between human and machine are becoming increasingly blurred by technology: this affects the whole translation landscape, from students and trainers to project managers and professionals, including in-house and freelance translators, as well as, of course, translation scholars and researchers. The editors have broad experience in translation quality evaluation research, including investigations into professional practice with qualitative and quantitative studies, and the contributors are leading experts in their respective fields, providing a unique set of complementary perspectives on human and machine translation quality and evaluation, combining theoretical and applied approaches.

Mac 911 Christopher Breen, 2002 This easy-to-use guide covers troubleshooting tips and tricks for Mac hardware and software, written by the well-known Macworld columnist and Macintosh guru Chris Breen. The book contains troubleshooting tips and techniques for both Mac OS 9 and OS X, and additional projects for making a Macintosh more productive—sharing files, making Mac OS X work more like Mac OS 9, and more.

The FFT in the 21st Century James K. Beard, 2013-03-09 This book was undertaken to provide a text and reference on the theory and practice of the FFT and its common usage. This book is organized in only four chapters, and is intended as a tutorial on the use of the FFT and its trade space. The trade space of the FFT is the parameters in its usage and the relationships

between them - the sample rate, the total number of points or the interval over which processing occurs in a single FFT, the selectivity of tuning to a given frequency over signals out-of-band, and the bandwidth over which a signal appears. The examples given in this text are in FORTRAN 95/2003. FORTRAN 2003 was frozen as a standard while this work was in progress. The listings given here are intended as an aid in understanding the FFT and associated algorithms such as spectral window weightings, with the goal of making the best of them more accessible to the reader. The code I use here provides a simple bridge between the material in the text and implementation in FORTRAN 2003, C++, Java, MATLAB ©, and other modern languages. The examples are sufficiently simple to be translated into older languages such as C and FORTRAN 77 if desired.
