Natural Hazard Mitigation Alessandra Jerolleman,John J. Kiefer,2012-11-26 One of the four core phases of emergency management, hazard mitigation is essential for reducing disaster effects on human populations and making communities more resilient to the impacts of hazards. Presenting an up-to-date look at the changing nature of disasters, Natural Hazard Mitigation offers practical guidance on the implementation and selection of hazard mitigation programs and projects. Based on real-world applications, the book includes case studies that present a thorough explanation of the various issues involved. The contributors describe the value and potential of mitigation efforts and explain how to convince public officials and communities of that value. They also discuss how to better involve the community and uniquely tailor solutions to regional and local situations. The book begins with an overview of the history of hazard mitigation with a focus on the Disaster Mitigation Act of 2000. It examines where hazard mitigation fits into emergency management and addresses some of the challenges that can arise in navigating the various intergovernmental relationships involved in hazard mitigation. The remaining chapters explore: Public-private partnerships for hazard mitigation at the local level The role currently played by the private sector and how communities can best make use of contractors How to maximize the use of the National Flood Insurance Program and the Community Ratings System Risk communications as a key component of encouraging hazard mitigation Legal issues relevant to hazard mitigation Ways to actively engage the community and how to advocate for hazard mitigation policy How state and local governments can promote and fund mitigation without utilizing federal dollars The challenges associated with volunteers and how

to best make use of this resource The area analysis as an innovative means of addressing flood risk at the block or neighborhood level The book includes learning objectives, key terms, and end-of-chapter questions to enhance comprehension. It concludes with a discussion of tools that local practitioners can use and provides an appendix with additional links and resources. This volume is an essential reference for both students and professionals in the ongoing effort to better prepare communities against the effects of natural hazards.

Toxicological Profile for Carbon Monoxide U.s. Department of Health and Human Services,2014-01-22 This toxicological profile is prepared in accordance with guidelines developed by the Agency for Toxic Substances and Disease Registry (ATSDR) and the Environmental Protection Agency (EPA). The original guidelines were published in the Federal Register on April 17, 1987. Each profile will be revised and republished as necessary. The ATSDR toxicological profile succinctly characterizes the toxicologic and adverse health effects information for the toxic substances each profile describes. Each peer-reviewed profile identifies and reviews the key literature that describes a substance's toxicologic properties. Other pertinent literature is also presented but is described in less detail than the key studies. The profile is not intended to be an exhaustive document; however, more comprehensive sources of specialty information are referenced. The profiles focus on health and toxicologic information; therefore, each toxicological profile begins with a public health statement that describes, in nontechnical language, a substance's relevant toxicological properties. Following the public health statement is information concerning levels of significant human exposure and, where known, significant health effects. A health effects summary describes the adequacy of information to determine a substance's health effects. ATSDR identifies data needs that are significant to protection of public health. Each profile: (A) Examines, summarizes, and interprets available toxicologic information and epidemiologic evaluations on a toxic substance to ascertain the levels of significant human exposure for the substance and the associated acute, subacute, and chronic health effects; (B) Determines whether adequate information on the health effects of each substance is available or being developed to determine levels of exposure that present a significant risk to human health of acute, subacute, and chronic health effects; and (C) Where appropriate, identifies toxicologic testing needed to identify the types or levels of exposure that may present significant risk of adverse health effects in humans.
