There is a growing body of evidence linking environmental exposures to cancer. The Pres. The Panel considered industrial, occupational, and agricultural exposures as well as exposures related to medical practice, military activities, modern lifestyles, and natural sources. The Contrast Cynthia A. Kierner, 2007-04-01 "The Contrast", which premiered at New York City's John Street Theater in 1787, was the first American play performed in public by a professional theater company. The play, written by New England-born, Harvard-educated, Royall Tyler was timely, funny, and extremely popular. When the play appeared in print in 1790, George Washington himself appeared at the head of its list of hundreds of subscribers. Reprinted here with annotated footnotes by historian Cynthia A. Kierner, Tyler's play explores the debate over manners, morals, and cultural authority in the decades following American Revolution. Did the American colonists' rejection of monarchy in 1776 mean they should abolish all European social traditions and hierarchies? What sorts of etiquette, amusements, and fashions were appropriate and beneficial? Most important, to be a nation, did Americans need to distinguish themselves from Europeans—and, if so, how? Tyler was not the only American pondering these questions, and Kierner situates the play in its broader historical and cultural contexts. An extensive introduction provides readers with a background on life and politics in the United States in 1787, when Americans were in the midst of nation-building. The book also features a section with selections from contemporary letters, essays, novels, conduct books, and public documents, which debate issues of the era.

On Their Own Terms Benjamin A. Elman, 2009-07-01 In *On Their Own Terms*, Benjamin A. Elman offers a much-needed synthesis of early Chinese science during the Jesuit period (1600-1800) and the modern sciences as they evolved in China under Protestant influence (1840s-1900). By 1600 Europe was ahead of Asia in producing basic machines, such as clocks, levers, and pulleys, that would be necessary for the mechanization of agriculture and industry. In the seventeenth and eighteenth centuries, Elman shows, Europeans still sought from the Chinese their secrets of producing silk, fine textiles, and porcelain, as well as large-scale tea cultivation. Chinese literati borrowed in turn new algebraic notations of Hindu-Arabic origin, Tychonic cosmology, Euclidian geometry, and various computational advances. Since the middle of the nineteenth century, imperial reformers, early Republicans, Guomindang party cadres, and Chinese Communists have all prioritized science and technology. In this book, Elman gives a nuanced account of the ways in which native Chinese science evolved over four centuries, under the influence of both Jesuit and Protestant missionaries. In the end, he argues, the Chinese produced modern science on their own terms.
