Transforming the Workforce for Children Birth Through Age 8 National Research Council,Institute of Medicine,Board on Children, Youth, and Families,Committee on the Science of Children Birth to Age 8: Deepening and Broadening the Foundation for Success,2015-07-23 Children are already learning at birth, and they develop and learn at a rapid pace in their early years. This provides a critical foundation for lifelong progress, and the adults who provide for the care and the education of young children bear a great responsibility for their health, development, and learning. Despite the fact that they share the same objective - to nurture young children and secure their future success - the various practitioners who contribute to the care and the education of children from birth through age 8 are not acknowledged as a workforce unified by the common knowledge and competencies needed to do their jobs well. Transforming the Workforce for Children Birth Through Age 8 explores the science of child development, particularly looking at implications for the professionals who work with children. This report examines the current capacities and practices of the workforce, the settings in which they work, the policies and infrastructure that set qualifications and provide professional learning, and the government agencies and other funders who support and oversee these systems. This book then makes recommendations to improve the quality of professional practice and the practice environment for care and education professionals. These detailed recommendations create a blueprint for action that builds on a unifying foundation of child development and early learning, shared knowledge and competencies for care and education professionals, and principles for effective professional learning. Young children thrive and learn best when they have secure, positive relationships with adults who are knowledgeable about how to support their development and learning and are responsive to their individual progress. Transforming the Workforce for Children Birth Through Age 8 offers guidance on system changes to improve the quality of professional practice, specific actions to improve professional learning systems and workforce development, and research to continue to build the knowledge base in ways that will directly advance and inform future actions. The recommendations of this book provide an opportunity to improve the quality of the care and the education that children receive, and ultimately improve outcomes for children.

9/11 and the Visual Culture of Disaster Thomas Stubblefield,2014-12-17 "[An] insightful view on how 9/11 is perceived in American society—the day that 'refuses to enter history,' the tragedy that 'has, in effect, not yet passed.'" —Journal of Popular Culture The day the towers fell, indelible images of plummeting rubble, fire, and falling bodies were imprinted in the memories of people around the world. Images that were caught in the media loop after the disaster and coverage of the attack, its aftermath, and the wars that followed reflected a pervasive tendency to treat these tragic events as spectacle. Though the collapse of the World Trade Center was "the most photographed disaster in history," it failed to yield a single noteworthy image of carnage. Thomas Stubblefield argues that the absence within these spectacular images is the paradox of 9/11 visual culture,

which foregrounds the visual experience as it obscures the event in absence, erasure, and invisibility. From the spectral presence of the Tribute in Light to Art Spiegelman's nearly blank New Yorker cover, from the elimination of the Twin Towers from TV shows and films to the monumental cavities of Michael Arad's 9/11 memorial, the void became the visual shorthand for the incident. By examining configurations of invisibility and erasure across the media of photography, film, monuments, graphic novels, and digital representation, Stubblefield interprets the post-9/11 presence of absence as the reaffirmation of national identity that implicitly laid the groundwork for the impending invasions of Iraq and Afghanistan. "A concise, engaging, and thought-provoking work that asks the reader to reassess their knowledge and relationship to that moment and the resulting milieu of post 9/11 life in America." —ARLIS/NA Reviews "Extraordinarily brilliant . . . will change how we think about disasters and tragedies. The book is a must-read for both students and practitioners of media studies." —Repository

Chromatic Cinema Richard Misek,2010-04-26 Chromatic Cinema Color permeates film and its history, but study of its contribution to film has so far been fragmentary. Chromatic Cinema provides the first wide-ranging historical overview of screen color, exploring the changing uses and meanings of color in moving images, from hand painting in early skirt dance films to current trends in digital color manipulation. In this richly illustrated study, Richard Misek offers both a history and a theory of screen color. He argues that cinematic color emerged from, defined itself in response to, and has evolved in symbiosis with black and white. Exploring the technological, cultural, economic, and artistic factors that have defined this evolving symbiosis, Misek provides an in-depth yet accessible account of color's spread through, and ultimate effacement of, black-and-white cinema.
