Forests and Food Bhaskar Vira 2015-11-15 As population estimates for 2050 reach over 9 billion, issues of food security and nutrition have been dominating academic and policy debates. A total of 805 million people are undernourished worldwide and malnutrition affects nearly every country on the planet. Despite impressive productivity increases, there is growing evidence that conventional agricultural strategies fall short of eliminating global hunger, as well as having long-term ecological consequences. Forests can play an important role in complementing agricultural production to address the Sustainable Development Goals on zero hunger. Forests and trees can be managed to provide better and more nutritionally-balanced diets, greater control over food inputs—particularly during lean seasons and periods of vulnerability (especially for marginalised groups)—and deliver ecosystem services for crop production. However forests are undergoing a rapid process of degradation, a complex process that governments are struggling to reverse. This volume provides important evidence and insights about the potential of forests to reducing global hunger and malnutrition, exploring the different roles of landscapes, and the governance approaches that

are required for the equitable delivery of these benefits. *Forests and Food* is essential reading for researchers, students, NGOs and government departments responsible for agriculture, forestry, food security and poverty alleviation around the globe.

Stalking Victimization in the United States Katrina Baum 2011-01 This is a print on demand edition of a hard to find publication. Stalking is defined as a course of conduct directed at a specific person that would cause a reasonable person to feel fear. The Supplemental Victimization Survey identified seven types of harassing or unwanted behaviors consistent with a course of conduct experienced by stalking victims. The survey classified individuals as stalking victims if they responded that they experienced at least one of these behaviors on at least two separate occasions. In addition, the individuals must have feared for their safety or that of a family member as a result

of the course of conduct, or have experienced additional threatening behaviors that would cause a reasonable person to feel fear. This report presents information on stalking victimization. Illustrations.

Invasive Alien Species Thammineni Pullaiah
2021-04-21 INVASIVE ALIEN SPECIES Invasive Alien Species: Observations and Issues from Around the World Volume 1: Issues and Invasions in Africa Invasive alien species are spreading into new ecosystems each year. The impacts caused by these invaders can be swift and devastating. The topic of invasive alien species is large, complex, and globally significant at various scales, exacerbated by the globalization of world economies and increased trade and commerce that has overcome natural barriers to species movement. Invasive alien species threaten global food supplies, water quality and availability, and energy production and delivery. With the added risks associated with global climate change, the global homogenization of plants, animals, and microbes is a major factor in the decline in ecosystem health and ecosystem services worldwide. To counter this trend, there is a critical need to unify governments, cultures, and programs to improve cross-boundary coordination to effectively address the wide range of invasive alien species threats to the environment, economies, and to plant and animal health; particularly human health. This 4-volume work is the first to compile a set of useful material for key topics, to provide a better understanding of the overall global threat of invasive alien species and the diverse array of problems faced around the world, and assemble material that includes potential replicable solutions to overcome these threats. The books also highlight the threat posed by invasive alien species in terms of a global 'call to action'. Since invasive species know no boundaries, it is our hope that by compiling material from different scientific and social perspectives around the world, and sharing knowledge and examples of a diverse array of associated topics, we can advance global awareness and improve unified national responses to the threat posed by invasive alien species.

Cloud Ginger Kathrens 2012-11-06 Published as a companion volume for public television's Nature series, *Cloud: The Wild Stallion of the Rockies* is documentary filmmaker Ginger Kathrens's personal retelling of her years following the wild horse she named Cloud. Beautifully designed, the book is elaborately photographed and divided into seventeen chapters that follow the life of a wild stallion, just one of hundreds of horses that have roamed wild in the Rocky Mountains for two hundred years. The book begins with the author and filmmaker witnessing the birth of a helpless white colt, that will soon capture her heart and imagination. Each subsequent chapter documents Cloud's interaction with his mare Raven, his brother Diamond, and other colts in the wild as well as his adventures encountering dangerous predators, older stallions, and human trappers. The author follows Cloud over the course of five years, taking note of his physical and behavioral development, as he begins to take on more of a leadership role in the band of wild bachelors he's joined, to become a fighter, a survivor, and a father. Kathrens's emotional involvement in Cloud's story is palpable, such as when she tearfully watches the young stallion get captured by trappers. Due to his unusual coloration, he is set free, though the other members of his band and sisters are removed and sold. Returning to the mountains every season, the author continues to look for Cloud in the vast wild habitat, always relieved to find him still living, despite fights, predators, and encounters with trappers. She is later touched to see how Cloud, the five-year-old mare, grazes with his yearling son, the first of his new family. Kathrens's gripping observations of wild horses of the Arrowheads, their fights, struggles, and alliances, give the reader much insight into the fascinating behavior of these wild horses.

Genetic Engineering Hugo Barrera-Saldaña 2012-01-18 Leading scientists from different countries around the world contributed valuable essays on the basic applications and safety, as well as the ethical and moral considerations, of the powerful genetic engineering tools now available for modifying the molecules, pathways, and phenotypes of species of agricultural, industrial and even medical importance. After three decades of perfecting such tools, we now see a refined technology, surprisingly unexpected applications, and matured guidelines to avoid unintentional damage to our and other species, as well as the environment, while trying to contribute to solve the biological, medical and technical challenges of society and industry. Chapters on thermo-stabilization of luciferase, engineering of the phenylpropanoid pathway in a species of high demand for the paper industry, more efficient regeneration of transgenic soybean, viral resistant plants, and a novel approach for rapidly screening properties of newly discovered animal growth

Trust Geoffrey Hosking 2014-08-07 Today there is much talk of a 'crisis of trust'; a crisis which is almost certainly genuine, but usually misunderstood. *Trust: A History* offers a new perspective on the ways in which trust and distrust have functioned in past societies, providing an empirical and historical basis against which the present crisis can be examined, and suggesting ways in which the concept of trust can be used as a tool to understand our own and other societies. Geoffrey Hosking argues that social trust is mediated through symbolic systems, such as religion and money, and the institutions associated with them, such as churches and banks. Historically these institutions have nourished trust, but the resulting trust networks have tended to create quite tough boundaries around themselves, across which distrust is projected against outsiders. Hosking also shows how nation-states have been particularly good at absorbing symbolic systems and generating trust among large numbers of people, while also erecting distinct boundaries around themselves, despite an increasingly global economy. He asserts that in the modern world it has become common to entrust major resources to institutions we know little about, and suggests that we need to learn from historical experience and temper this with more traditional forms of trust, or become an ever more distrustful society, with potentially very destabilising consequences.
