   Columbia Crew Survival Investigation Report
Nasa,2009 NASA commissioned the Columbia Accident
Investigation Board (CAIB) to conduct a thorough
review of both the technical and the
organizational causes of the loss of the Space
Shuttle Columbia and her crew on February 1, 2003.
The accident investigation that followed
determined that a large piece of insulating foam
from Columbia's external tank (ET) had come off
during ascent and struck the leading edge of the
left wing, causing critical damage. The damage was
undetected during the mission. The Columbia
accident was not survivable. After the Columbia
Accident Investigation Board (CAIB) investigation
regarding the cause of the accident was completed,
further consideration produced the question of
whether there were lessons to be learned about how
to improve crew survival in the future. This
investigation was performed with the belief that a
comprehensive, respectful investigation could
provide knowledge that can protect future crews in
the worldwide community of human space flight.
Additionally, in the course of the investigation,
several areas of research were identified that
could improve our understanding of both nominal
space flight and future spacecraft accidents. This
report is the first comprehensive, publicly
available accident investigation report addressing
crew survival for a human spacecraft mishap, and
it provides key information for future crew
survival investigations. The results of this

investigation are intended to add meaning to the sacrifice of the crew's lives by making space flight safer for all future generations.

IBM MQ V8 Features and Enhancements Rufus Credle,Carolyn Elkins,Peter Hayward,Valerie Lampkin,Matthew Leming,Jonatan Maya Sanchez,Mark Taylor,Mark Wilson,IBM Redbooks,2014-10-02 The power of IBM® MQ is its flexibility combined with reliability, scalability, and security. This flexibility provides a large number of design and implementation choices. Making informed decisions from this range of choices can simplify the development of applications and the administration of an MQ messaging infrastructure. Applications that access such an infrastructure can be developed using a wide range of programming paradigms and languages. These applications can run within a substantial array of software and hardware environments. Customers can use IBM MQ to

integrate and extend the capabilities of existing and varied infrastructures in the information technology (IT) system of a business. IBM MQ V8.0 was released in June 2014. Before that release, the product name was IBM WebSphere® MQ. This IBM Redbooks® publication covers the core enhancements made in IBM MQ V8 and the concepts that must be understood. A broad understanding of the product features is key to making informed design and implementation choices for both the infrastructure and the applications that access it. Details of new areas of function for IBM MQ are introduced throughout this book, such as the changes to security, publish/subscribe clusters, and IBM System z exploitation. This book is for individuals and organizations who make informed decisions about design and applications before implementing an IBM MQ infrastructure or begin development of an IBM MQ application.

   Guidelines for the management of symptomatic sexually transmitted infections World Health Organization,2021-07-15 The WHO global health sector strategy on sexually transmitted infections, 2016–2021, endorsed by the World Health Assembly in 2016, aims to eliminate STIs as a public health threat by 2030. In 2019, WHO published estimates of new cases of chlamydia, gonorrhoea, syphilis and trichomoniasis. Recent changes in the epidemiology of STIs and progress in prevention, diagnosis and treatment of STIs and HIV have necessitated changes in approaches to STI prevention and management. To address these STIs, the most widely used approach in clinical settings is the syndromic management of STIs. In most resource-limited settings, the syndromic management flow charts are still the standard of care where laboratory diagnosis is not available

or is hard to access. The objectives of these guidelines are to provide updated, evidence-informed clinical and practical recommendations on the case management of people with symptoms of STIs; and to support countries in updating their national guidelines for the case management of people with symptoms of STIs. These guidelines include the management of symptomatic infections related to urethral discharge syndrome, including persistent urethral discharge syndrome; vaginal discharge syndrome, including persistent vaginal discharge; anorectal infection; genital ulcer disease syndrome; and lower abdominal pain syndrome. These guidelines are intended for programme managers for STI prevention and control at the national level and the health-care providers at the frontline – primary, secondary and tertiary health care.
