Mapping Intermediality in Performance Sarah Bay-Cheng, Chiel Kattenbelt, Andy Lavender, 2010 This insightful book explores the relationship between theater and digital culture. The authors show that the marriage of traditional performance with new technologies leads to an upheaval of the implicit “live” quality of theatre by introducing media interfaces and Internet protocols, all the while blurring the barriers between theater-makers and their audience.

Mapping Biology Knowledge K. Fisher, J.H. Wandersee, D.E. Moody, 2001-11-30 Mapping Biology Knowledge addresses two key topics in the context of biology, promoting meaningful learning and knowledge mapping as a strategy for achieving this goal. Meaning-making and meaning-building are examined from multiple perspectives throughout the book. In many biology courses, students become so mired in detail that they fail to grasp the big picture. Various strategies are proposed for helping instructors focus on the big picture, using the ‘need to know’ principle to decide the level of detail students must have in a given situation. The metacognitive tools described here serve as support systems for the mind, creating an arena in which learners can operate on ideas. They include concept maps, cluster maps, webs, semantic networks, and conceptual graphs. These tools, compared and contrasted in this book, are also useful for building and assessing students' content and cognitive skills. The expanding role of computers in mapping biology knowledge is also explored.

Socio-Life Science and the COVID-19 Outbreak Makoto Yano, Fumihiko Matsuda, Anavaj Sakuntabhai, Shigeru Hirota, 2022 This open access book presents the first step towards building socio-life science, a field of science investigating humans in such a way that both social and life-scientific factors are integrated. Because humans are both living and social creatures, a human action can never be understood fully without knowing both the biological traits of a person and the social scientific environments in which he exists. With this consideration, the editors of this book have initiated a research project promoting a deeper and more integrated understanding of human behavior and human health. This book aims to show what can, and could be, achieved through our interdisciplinary project. One important product is the newly formed three-party collaboration between Pasteur Institut, Kyoto University, and the Research Institute of Economy, Trade and Industry. Covering many different fields, including medicine, epidemiology, anthropology, economics, sociology, demography, geography, and policy, researchers in these institutes, and many others, present their studies on the COVID-19 pandemic. Although based on different methodologies, the studies show the importance of behavioral change and governmental policy in the fight against a huge pandemic. The book explains the unique genome cohort-panel data that the project builds to study social and life scientific aspects of humans.

Cell Migration Claire M. Wells, Maddy Parsons, 2017-05-04
Cell migration is a key component of many biological processes including embryonic development, immune responses, wound healing, organ regeneration, and cancer cell metastasis, thus making it an exciting and crucial field of study. The aim of *Cell Migration: Developmental Methods and Protocols, Second Edition* is to bring together a wide range of these techniques from the more basic migration assays, which are still the foundation of many cell migration studies, to state-of-the-art techniques and recent technical advances. Divided into three convenient parts, the volume begins with a number of basic in vitro migration assays including measurements of wound healing, cell scattering, invasion, and chemotaxis, as well as more complex measurements of transendothelial migration, the use of microfluidic chambers, and imaging cell migration in 3D. It continues with procedures for the imaging and measurement of cell migration in vivo including protocols for the use of chick, drosophila, and zebrafish embryos, and methods to measure metastatic spread and angiogenesis in mice, then concludes with a vital section on emerging techniques in the cell migration field including the use of TIRF, FRAP, and FRET microscopy. Written in the highly successful *Methods in Molecular Biology*TM series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible laboratory protocols, and notes from the experts on troubleshooting and avoiding known pitfalls. Comprehensive and up-to-date, *Cell Migration: Developmental Methods and Protocols, Second Edition* provides a comprehensive catalogue of techniques for the study of cell migration that can be used as a useful reference source for any researcher who wishes to explore this significant area of cell biology.

Crop Stress and its Management: Perspectives and Strategies B. Venkateswarlu, Arun K. Shanker, Chitra Shanker, M. Maheswari, 2011-11-22 Crops experience an assortment of environmental stresses which include abiotic viz., drought, water logging, salinity, extremes of temperature, high variability in radiation, subtle but perceptible changes in atmospheric gases and biotic viz., insects, birds, other pests, weeds, pathogens (viruses and other microbes). The ability to tolerate or adapt and overwinter by effectively countering these stresses is a very multifaceted phenomenon. In addition, the inability to do so which renders the crops susceptible is again the result of various exogenous and endogenous interactions in the ecosystem. Both biotic and abiotic stresses occur at various stages of plant development and frequently more than one stress concurrently affects the crop. Stresses result in both universal and definite effects on plant growth and development. One of the imposing tasks for the crop researchers globally is to distinguish and to diminish effects of these stress factors on the performance of crop plants, especially with respect to yield and quality of harvested products. This is of special significance in view of the impending climate change, with complex consequences for economically profitable and ecologically and environmentally sound global agriculture. The challenge at the hands of the crop scientist in such a scenario is to promote a competitive and multifunctional agriculture, leading to the production of highly nourishing, healthy and secure food and animal feed as well as raw materials for a wide variety of industrial applications. In order to successfully meet this challenge researchers have to understand the various aspects of these stresses in view of the current development from molecules to ecosystems. The book will focus on broad research areas in relation to these stresses which are in the forefront in contemporary crop stress research.

Hematopoietic Stem Cell Protocols Christopher A. Klug, Craig T. Jordan, 2008-02-01 The ability to highly purify and characterize

hematopoietic stem cells (HSC) from mice and humans has opened up an exceedingly rich field of basic science research with enormous clinical potential. Many of the techniques used in studies of HSC biology have become more standardized over the last several years, which makes it possible to compile a set of methods that can be used by both seasoned investigators and novices in the stem cell field. We have attempted to be as comprehensive as possible and yet focus on what we perceive to be the most widely used approaches for studies of murine and human HSC. This first edition of Hematopoietic Stem Cell Protocols will therefore have some obvious omissions that were dictated by contemporary circumstances. It is our hope that readers will feel free to contribute their personal suggestions for further chapters as well as on how existing chapters can be improved for future editions. We certainly expect that old approaches will be refined, new assays will be developed, and other animal model and vector systems will be described that will become the new gold standards for future work. Our sincere thanks goes out to all of the contributors and to those in the stem cell field that have enlarged our thinking and provided new tools to further understand this fascinating cell type.

Walking With Giants Elmer L. Towns, 2012-08-01 Elmer Towns is known around the world as cofounder of the world's largest Christian university and as author of more than 175 popular books on prayer, spirituality and the Church. He is also known as a motivator par excellence of men and women who long to be exceptional for the cause of Christ. But not many people know that a long "desert experience" lies behind Towns's extraordinary success, an experience that taught him how to be, in the words of the apostle Paul, "crucified with Christ" (Gal. 2:20). In these memoirs, one of the modern Church's most influential teachers shares his fascinating life story, drawing out

principles that can be applied by anyone seeking to become great in God's kingdom. Leaders and students alike will be challenged to greater faithfulness and encouraged to seek God more deeply.

Tourism and Archaeological Heritage Management at Petra Douglas C. Comer,2011-12-07 In 1985, Petra was included on the list of World Heritage Sites. Since then, low cost jet travel and a fast highway from Amman have made the site increasingly accessible. This book asks the question: will tourism damage the archaeological remains there in ways that make answers more difficult or even impossible to find?

Piers the Ploughman William Langland,2006-01-26 Written by a fourteenth-century cleric, this spiritual allegory explores man in relation to his ultimate destiny against the background of teeming, colorful medieval life.

Intensive Use of Groundwater: M. Ramon Llamas,E. Custodio,2002-01-01 This text is written by a number of authors from different countries and disciplines, affording the reader an invaluable and unbiased perspective on the subject of intensive groundwater development. Based on information gathered from the experience of many countries over the last decades, the text aims to present a clear discussion on the conventional hydrogeological aspects of intensive groundwater use, along with the ecological, legal, institutional, economic and social challenges. Divided into two main sections, the first group of authors put forward the positive and negative aspects of intensive groundwater use, whilst a second group provide an overview of the situation specific countries face as a consequence of this phenomenon. Fully revised and up-to-date, *Groundwater Intensive Use* makes a significant number of discoveries in a subject area that is topical in today's climate.

Molecular Breeding for Sustainable Crop Improvement

Vijay Rani Rajpal, S. Rama Rao, S.N. Raina, 2016-02-02 The world population is estimated to reach to more than 10 billion by the year 2050. These projections pose a challenging situation for the agricultural scientists to increase crops productivity to meet the growing food demands. The unavailability and/or inaccessibility to appropriate gene pools with desired traits required to carry out genetic improvement of various crop species make this task formidable for the plant breeders. Incidentally, most of the desired genes reside in the wild genetic relatives of the crop species. Therefore, exploration and characterization of wild genetic resources of important crop species is vital for the efficient utilization of these gene pools for sustainable genetic improvements to assure food security. Further, understanding the

myriad complexities of genic and genomic interactions among species, more particularly of wild relatives of crop species and/or phylogenetically distant germplasm, can provide the necessary inputs to increase the effectiveness of genetic improvement through traditional and/or genetic engineering methods. This book provides comprehensive and latest insights on the evolutionary genesis of diversity, access and its utilization in the evolution of various crop species. A comprehensive account of various crops, origin, exploitation of the primary, secondary and tertiary gene pools through breeding, biosystematical, cytogenetical and molecular phylogenetical relationships, and genetic enhancement through biotechnological interventions among others have been provided as the necessary underpinnings to consolidate information on the effective and sustainable utilization of the related genetic resources. The book stresses upon the importance of wild germplasm exploration, characterization and exploitation in the assimilation of important crop species. The book is especially intended for students and scientists working on the genetic improvement of crop species. Plant Breeders, Geneticists, Taxonomists, Molecular Biologists and Plant Biotechnologists working on crop species are going to find this book very useful.

Cancer Prevention II Hans-Jörg Senn, Ursula Kapp, Florian Otto, 2010-11-22 More than 180 participants and experts from 31 countries met for the fifth time in 10 years in St. Gallen, Switzerland for a 3-day conference to discuss important current issues of clinical cancer prevention. The meeting was again organized and co-sponsored by St. Gallen Oncology Conferences (SONK). While SONK has been extremely successful in organizing large international c- gresses on "Primary Therapy of Early Breast Cancer" as well as "Supportive Care in Cancer" for more than 20 years, the idea of promoting interdisciplinary, clinically oriented meetings on cancer prevention is a more recent and not yet generally accepted and w- comed concept in modern oncology.

Since today's medical expenses are soaring and medical research budgets are stagnating or even being cut, neither politicians nor industry is willing to risk an additional unpredictable channel of expenses, such as that demanded by clinical cancer prevention efforts! In Switzerland—and we fear in many other parts of the globe—some 97%–98% or even a greater percentage of health budgets is spent for curative and palliative/rehabilitative medicine. Since a meager 2%–3% of national health budgets is for preventive medicine, even less than that proportion is specifically allocated for cancer prevention. When the money for “curing and caring” for the diseased populace runs short, there is likely not much left for partly controversial disease prevention in the (still) healthy part of the population.

Hematopoietic Stem Cell Protocols Kevin D.

Bunting, Cheng-Kui Qu, 2014-07-26 Updating and building upon previous editions, *Hematopoietic Stem Cell Protocols*, Third Edition provides up-to-date protocols from leading stem cell researchers. This in-depth volume presents a clear view of the landscape of assays available to the stem cell researcher working in the growing hematopoietic stem cell (HSC) field. A robust and active field, it is supported by an abundance of innovative mouse models and molecular tools for analysis of phenotypes and functions in mouse and human cells. Understanding more about hematopoietic stem cell biology is integral if these versatile cells are to be applied effectively to treat and cure a wide range of blood diseases. An introductory chapter puts the major contributions of the book into the proper perspective. Written in the successful *Methods in Molecular Biology* series format, chapters include introductions to their respective topics, lists of the necessary materials and reagents, step-by-step, readily reproducible protocols, and notes on troubleshooting and avoiding known pitfalls. Essential for the laboratory-based researcher, *Hematopoietic Stem Cell Protocols*, Third Edition is a much needed technical resource in the critically important field of

hematopoietic stem cell investigation.
