ADME Processes in Pharmaceutical Sciences Alan Talevi,Pablo A. M. Quiroga,2018-11-30 Absorption, Distribution, Metabolism and Excretion (ADME)

processes and their relationship with the design of dosage forms and the success of pharmacotherapy form the basis of this upper level undergraduate/graduate textbook. As an introduction oriented to pharmacy students, it is also written for scientist from different fields outside of pharmaceuticals. (e.g. material scientist, material engineers, medicinal chemists) who might be working in a positions in pharmaceutical companies or whose work might benefit from basic training in the ADME concepts and some biological background. Pedagogical features such as objectives, key words, discussion questions, summaries and case studies add valuable teaching tools. This book will provide not only general knowledge on ADME processes but also an updated insight on some hot topics such as drug transporters, multi-drug resistance related to pharmacokinetic phenomena, last generation pharmaceutical carriers (nanopharmaceuticals), in vitro and in vivo bioequivalence studies, biopharmaceuticals, pharmacogenomics, drug-drug and food-drug interactions, and in silico and in vitro prediction of ADME properties. In comparison with other similar textbooks, around half of the volume would be focused on the relationship between expanding scientific fields and ADME processes. Each of these burgeoning fields has a separate chapter in the second part of the volume, and was written with leading experts on the correspondent topic, including scientists and academics from USA and UK (Duquesne University School of Pharmacy, Indiana University School of Medicine, University of Utah College of Pharmacy, University of Maryland, University of Bath). Additionally, each of the initial chapters dealing with the generalities of drug absorption, distribution, metabolism and excretion would include relevant, classic examples related to each topic with appropriate illustrations (e.g. importance of active absorption of levodopa, implications in levodopa administration, drug drug interactions and food drug interactions emerging from the active uptake; intoxication with paracetamol as a result of glutathione depletion, CYP induction and its relationship with acute liver failure caused by paracetamol, etc). ADME Processes and Pharmaceutical Sciences is written as a core textbook for ADME processes, pharmacy, pharmacokinetics, drug delivery, biopharmaceutics, drug disposition, drug design and medicinal chemistry courses.

**Integrative Pediatric Oncology** Alfred Längler, Patrick J. Mansky, Georg Seifert, 2012-12-13 This book covers a broad spectrum of complementary and alternative medicine (CAM) practices employed in pediatric oncology worldwide, with a special focus on the methods widely used in Western countries. It is a scientifically based, practice-oriented handbook that will meet the needs of pediatric oncologists working in medical practices and hospitals. An introductory section includes a comparative overview of current CAM use in pediatric oncology in different countries. Commonly used CAM methods are then discussed in a series of chapters that provide a theoretical description of the method in question, followed by more practically oriented information, including scientific data if applicable. Special attention is paid to the issue of how to integrate each method into conventional pediatric oncology. The closing parts of the book consider aspects of CAM requiring further development, such as institutional research, and provide a road map on establishing integrative pediatric oncology worldwide.

**MoneyBall Medicine** Harry Glorikian, Malorye Allison Branca, 2017-11-20 How can a smartwatch help patients with diabetes manage their disease? Why can't patients find out prices for surgeries and other procedures before they happen? How can researchers speed up the decade-long process of drug development? *Community Resilience to Sectarian Violence in Baghdad* Ami C. Carpenter, 2013-10-04 The recent conflict in Iraq evolved from an insurgency against the interim U.S. led government (the Coalition Provisional Authority or CPA) into a sectarian civil war. Violence became widespread, especially in areas of Baghdad City such as Sadr City, Al Amiriyah, and Al Adhamiya. However, a number of multiethnic neighborhoods in Baghdad successfully prevented sectarian attitudes and behaviors from taking hold. Four communities stand out in their self-organization to prevent the escalation of violence. This book looks at what makes these communities different from other areas within Baghdad. In-depth interviews in Sunni-dominant, Shia-dominant and Mixed neighborhoods generated a few key insights about conflict-resilience, or the capacity to prevent structural changes associated with conflict escalation. Key factors turned out to be the organization of non-sectarian self-defense groups, place attachment, collective efficacy, active intervention to de-escalate tensions, and also the presence of local religious leaders who forbid sectarian attacks. The continuity or strength of interpersonal relationships supported by the integrated physical structure of these neighborhoods and internal versus tribal conflict resolution mechanisms played a role as well. This volume examines the characteristics of the communities that have successfully prevented the rise of violence, and how they are able to maintain qualities of resilience to violent conflict.

**The Arma Christi in Medieval and Early Modern Material Culture** Lisa H. Cooper, Andrea Denny-Brown, 2016-12-05 The Arma Christi, the cluster of objects associated with Christ's Passion, was one of the most familiar iconographic devices of European medieval and early modern culture. From the weapons used to torment and sacrifice the body of Christ sprang a reliquary tradition that produced active and contemplative devotional practices, complex literary narratives, intense lyric poems, striking visual images, and innovative architectural ornament. This collection displays the fascinating range of intellectual possibilities generated by representations of these medieval 'objects,' and through the interdisciplinary collaboration of its contributors produces a fresh view of the multiple intersections of the spiritual and the material in the Middle Ages and Renaissance. It also includes a new and authoritative critical edition of the Middle English Arma Christi poem known as 'O Vernicle' that takes account of all twenty surviving manuscripts. The book opens with a substantial introduction that surveys previous scholarship and situates the Arma in their historical and aesthetic contexts. The ten essays that follow explore representative

examples of the instruments of the Passion across a broad swath of history, from some of their earliest formulations in late antiquity to their reformulations in early modern Europe. Together, they offer the first large-scale attempt to understand the arma Christi as a unique cultural phenomenon of its own, one that resonated across centuries in multiple languages, genres, and media. The collection directs particular attention to this array of implements as an example of the potency afforded material objects in medieval and early modern culture, from the glittering nails of the Old English poem *Elene* to the coins of the Middle English poem 'Sir Penny,' from garments and dice on Irish tomb sculptures to lanterns and ladders in Hieronymus Bosch's panel painting of St. Christopher, and from the altar of the Sistine Chapel to the printed prayer books of the Reformation.
