Divided into three main sections, Digital Television explores: * Video: MPEG-2, which is at the heart of all digital video broadcasting services * Audio: MPEG-2 Advanced Audio Coding and Dolby AC-3, which will be used internationally in digital video broadcasting systems * Systems: MPEG, modulation transmission, forward error correction, datacasting, conditional access, and digital storage media command and control Complete with tables, illustrations, and figures, this valuable textbook includes problems and laboratories at the end of each chapter and also offers a number of exercises that allow students to implement the various techniques discussed using MATLAB. The authors' coverage of implementation and theory makes this a practical reference for professionals, as well as an indispensable textbook for advanced undergraduates and graduate-level students in electrical engineering and computer science programs.
