The Politics of Cyberconflict Athina Karatzogianni,2006-09-27 The Politics of

Cyberconflict focuses on the implications that the phenomenon of cyberconflict (conflict in computer mediated enivironments and the internet) has on politics, society and culture. Athina Karatzogianni proposes a new framework for analyzing this new phenomenon, which distinguishes between two types of cyberconflict, ethnoreligious and sociopolitical, and uses theories of conflict, social movement and the media. A comprehensive survey of content, opinion and theory in several connected fields, relating not only to information warfare and cyberconflict, but also social movements and ethnoreligious movements is included. Hacking between ethnoreligious groups, and the use of the internet in events in China, the Israel-Palestine conflict, India-Pakistan conflict, as well as the antiglobalization and antiwar movements and the 2003 Iraq War are covered in detail. This is essential reading for all students of new technology, politics, sociology and conflict studies.

  Ubiquitous Computing Fundamentals John Krumm,2018-10-08 ...a must-read text that provides a historical lens to see how ubicomp has matured into a multidisciplinary endeavor. It will be an essential reference to researchers and those who want to learn more about this evolving field. - From the Foreword, Professor Gregory D. Abowd, Georgia Institute of Technology First introduced two decades ago, the term ubiquitous computing is now part of the common vernacular. Ubicomp, as it is commonly called, has grown not just quickly but broadly so as to encompass a wealth of concepts and technology that serves any number of purposes across all of human endeavor. While such growth is positive, the newest generation of ubicomp practitioners and researchers, isolated to specific tasks, are in danger of losing their sense of history and the broader perspective that

has been so essential to the field's creativity and brilliance. Under the guidance of John Krumm, an original ubicomp pioneer, Ubiquitous Computing Fundamentals brings together eleven ubiquitous computing trailblazers who each report on his or her area of expertise. Starting with a historical introduction, the book moves on to summarize a number of self-contained topics. Taking a decidedly human perspective, the book includes discussion on how to observe people in their natural environments and evaluate the critical points where ubiquitous computing technologies can improve their lives. Among a range of topics this book examines: How to build an infrastructure that supports ubiquitous computing applications Privacy protection in systems that connect personal devices and personal information Moving from the graphical to the ubiquitous computing user interface Techniques that are revolutionizing the way we determine a person's location and understand other sensor measurements While we needn't become expert in every sub-discipline of ubicomp, it is necessary that we appreciate all the perspectives that make up the field and understand how our work can influence and be influenced by those perspectives. This is important, if we are to encourage future generations to be as successfully innovative as the field's originators.

Application of Systematic Review Methods in an Overall Strategy for Evaluating Low-Dose Toxicity from Endocrine Active Chemicals National Academies of Sciences, Engineering, and Medicine,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Endocrine-Related Low-Dose Toxicity,2017-08-14 To safeguard public health, the US Environmental Protection Agency (EPA) must keep abreast of new scientific information and emerging technologies so that it can apply them to regulatory decision-making. For decades the agency has dealt with questions about what animal-testing data to use to make predictions about human health hazards, how to perform dose-response extrapolations, how to

identify and protect susceptible subpopulations, and how to address uncertainties. As alternatives to traditional toxicity testing have emerged, the agency has been faced with additional questions about how to incorporate data from such tests into its chemical assessments and whether such tests can replace some traditional testing methods. Endocrine active chemicals (EACs) have raised concerns that traditional toxicity-testing protocols might be inadequate to identify all potential hazards to human health because they have the ability to modulate normal hormone function, and small alterations in hormone concentrations, particularly during sensitive life stages, can have lasting and significant effects. To address concerns about potential human health effects from EACs at low doses, this report develops a strategy to evaluate the evidence for such low-dose effects.

  <u>Relieving Pain in America</u> Institute of
Medicine,Board on Health Sciences Policy,Committee
on Advancing Pain Research, Care, and
Education,2011-10-26 Chronic pain costs the nation
up to $635 billion each year in medical treatment
and lost productivity. The 2010 Patient Protection
and Affordable Care Act required the Department of
Health and Human Services (HHS) to enlist the
Institute of Medicine (IOM) in examining pain as a
public health problem. In this report, the IOM
offers a blueprint for action in transforming
prevention, care, education, and research, with
the goal of providing relief for people with pain
in America. To reach the vast multitude of people
with various types of pain, the nation must adopt
a population-level prevention and management
strategy. The IOM recommends that HHS develop a
comprehensive plan with specific goals, actions,
and timeframes. Better data are needed to help
shape efforts, especially on the groups of people
currently underdiagnosed and undertreated, and the
IOM encourages federal and state agencies and
private organizations to accelerate the collection
of data on pain incidence, prevalence, and
treatments. Because pain varies from patient to

patient, healthcare providers should increasingly aim at tailoring pain care to each person's experience, and self-management of pain should be promoted. In addition, because there are major gaps in knowledge about pain across health care and society alike, the IOM recommends that federal agencies and other stakeholders redesign education programs to bridge these gaps. Pain is a major driver for visits to physicians, a major reason for taking medications, a major cause of disability, and a key factor in quality of life and productivity. Given the burden of pain in human lives, dollars, and social consequences, relieving pain should be a national priority.

  Transportation Decision Making Kumares C. Sinha,Samuel Labi,2011-09-09 This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming, whichcan help transportation professionals to optimize their investmentchoices. The authors present a proven set of methodologies forevaluating transportation projects that ensures that all costs andimpacts are taken into consideration. The text's logical organization gets readers started with asolid foundation in basic principles and then progressively buildson that foundation. Topics covered include: Developing performance measures for evaluation, estimatingtravel demand, and costing

transportation projects Performing an economic efficiency evaluation that accounts forsuch factors as travel time, safety, and vehicle operatingcosts Evaluating a project's impact on economic development and landuse as well as its impact on society and culture Assessing a project's environmental impact, including airquality, noise, ecology, water resources, and aesthetics Evaluating alternative projects on the basis of multipleperformance criteria Programming transportation investments so that resources can beoptimally allocated to meet facility-specific and system-widegoals Each chapter begins with basic definitions and concepts followedby a methodology for impact assessment. Relevant legislation isdiscussed and available software for performing evaluations ispresented. At the end of each chapter, readers are providedresources for detailed investigation of particular topics. Theseinclude Internet sites and publications of international anddomestic agencies and research institutions. The authors alsoprovide a companion Web site that offers updates, data foranalysis, and case histories of project evaluation and decisionmaking. Given that billions of dollars are spent each year ontransportation systems in the United States alone, and that thereis a need for thorough and rational evaluation and decision makingfor cost-effective system preservation and improvement, this textshould be on the desks of all transportation planners, engineers,and educators. With exercises in every chapter, this text is anideal coursebook for the subject of transportation systems analysisand evaluation.
