SAP Backup using Tivoli Storage Manager Budi Darmawan,Miroslav Dvorak,Dhruv Harnal,Gerson Makino,Markus Molnar,Rennad Murugan,Marcos Silva,IBM Redbooks,2013-04-26 In this IBM® Redbooks® publication, we give an overview of different data management topics related to a typical SAP® data center. The intrinsic functionality of SAP is not designed to completely handle all the tasks of a data center by itself, but the SAP system offers several interface possibilities to attach external tools to it to accomplish this task We explain SAP basic concepts and the issues with SAP data management. We introduce Tivoli® Storage Manager and all of its products that are related to SAP data management. We provide some comparison between database backup and recovery tools. Finally, we discuss data archiving using IBM DB2® CommonStore for SAP, and discuss high availability requirements and disaster recovery considerations. The second part of this book discusses a practical implementation of SAP backup and recovery with Tivoli Storage Manager. We implement this setup on two separate SAP systems: one running DB2 and the other running Oracle® database. We also implement LAN-free backup and FlashCopy® scenarios. In the sample implementation section, we show many different tasks, such as backup and restore, database recovery, backup monitoring, and tuning. We also cover some advanced backup/availability considerations, such as split mirror backup and standby databases. This book helps individuals that operate an SAP environment to devise a strategy for a sound and

comprehensive data backup solution using the IBM Tivoli Storage Management product family.

Description of Input and Examples for Phreeqc Version 3 David L. Parkhurst,C. A..j. Apello,2014-07-17 PHREEQC version 3 is a computer program written in the C and C++ programming languages that is designed to perform a wide variety of aqueous geochemical calculations. PHREEQC implements several types of aqueous models: two ion-association aqueous models (the Lawrence Livermore National Laboratory model and WATEQ4F), a Pitzer specific-ion-interaction aqueous model, and the SIT (Specific ion Interaction Theory) aqueous model. Using any of these aqueous models, PHREEQC has capabilities for (1) speciation and saturation-index calculations; (2) batch-reaction and one-dimensional (1D) transport calculations with reversible and irreversible reactions, which include aqueous, mineral, gas, solid-solution, surface-complexation, and ion-exchange equilibria, and specified mole transfers of reactants, kinetically controlled reactions, mixing of solutions, and pressure and temperature changes; and (3) inverse modeling, which finds sets of mineral and gas mole transfers that account for differences in composition between waters within specified compositional uncertainty limits.

Beginning SAS Programming Yufeng Guo,2015-06-04 My support site is saszero2hero.com. Despite the popularity of R and Python, many large private companies in insurance, banking, and pharmaceutical industries, to name a few, still predominantly use SAS. If you plan to work or are already working in one of the companies that use SAS for data manipulation and analysis, you might want to learn SAS. However, for many, SAS is much harder to learn than Visual Basic, Java, and Python. The good news is that because SAS is difficult to learn there's a shortage of SAS programming talents in many places across the globe. Learning SAS can open new career opportunities for you, even if you already know R and Python. If you are a complete beginner wanting to learn SAS and boost your career in the big data field, this book is for you. In this book, I'll teach you SAS programming from the ground up starting from a Hello World program. My goal is to transform you from knowing nothing about SAS into an advanced SAS programmer. Follow this book and learn SAS today.
