Toman's Tuberculosis K. Toman, 2004-06-23 This is the second edition of a reference work aimed at all those concerned with dealing with tuberculosis control in developing countries. The book follows in the tradition of Kurt Toman's original work in this field, with the text set out in a question and answer format, grouped under three headings: case detection; treatment, and monitoring. The threat of tuberculosis is still potent, with two million deaths globally. **Implementing Database Security and Auditing** Ron Ben Natan, 2005-05-20 This book is about database security and auditing. You will learn many methods and techniques that will be helpful in securing, monitoring and auditing database environments. It covers diverse topics that include all aspects of database security and auditing - including network security for databases, authentication and authorization issues, links and replication, database Trojans, etc. You will also learn of vulnerabilities and attacks that exist within various database environments or that have been used to attack databases (and that have since been fixed). These will often be explained to an "internals level. There are many sections which outline the "anatomy of an attack - before delving into the details of how to combat such an attack. Equally important, you will learn about the database auditing landscape - both from a business and regulatory requirements perspective as well as from a technical implementation perspective. \* Useful to the database administrator and/or security administrator - regardless of the precise database vendor (or vendors) that you are using within your organization. \* Has a large number of examples - examples that pertain to Oracle, SQL Server, DB2, Sybase and even MySQL.. \* Many of the techniques you will see in this book will never be described in a manual or a book that is devoted to a certain database product. \* Addressing complex issues must

take into account more than just the database and focusing on capabilities that are provided only by the database vendor is not always enough. This book offers a broader view of the database environment - which is not dependent on the database platform - a view that is important to ensure good database security.

Advances in Geroscience Felipe Sierra, Ronald Kohanski, 2015-11-10 This book provides the first comprehensive overview of a new scientific discipline termed Geroscience. Geroscience examines the molecular and cellular mechanisms that might explain why aging is the main risk factor for most chronic diseases affecting the elderly population. Over the past few decades, researchers have made impressive progress in understanding the genetics, biology and physiology of aging. This book presents vital research that can help readers to better understand how aging is a critical malleable risk factor in most chronic diseases, which, in turn, could lead to interventions that can help increase a healthy lifespan, or 'healthspan.' The book begins with an analysis of the Geroscience hypothesis, as well as the epidemiological underpinnings that define aging as a candidate main risk factor for most chronic diseases. Next, each chapter focuses on one particular disease, or group of diseases, with an emphasis on how basic molecular and cellular biology might explain why aging is a major risk factor for it. Coverage in the book includes: cancer, cardiovascular disease, dementias, stroke, Parkinson's and Alzheimer's diseases, osteoporosis, arthritis, diabetes asthma, emphysema, kidney disease, vision impairment, and AIDS/HIV. It finishes with a chapter on pain in the elderly and an overview of future steps needed to bring the newly acquired knowledge into the clinic and the public at large.

**The Frontiers of Language and Nationality in Europe** Leon Dominian, 2020-05-09 This book has been considered by academicians and scholars of great significance and value to literature. **Advanced Time-Correlated Single Photon Counting Techniques** Wolfgang Becker, 2005-12-19 In 1984 Desmond O'Connor and David Phillips published their comprehensive book „Time-correlated Single Photon Counting“. At that time time-correlated single photon counting, or TCSPC, was used

primarily to record fluorescence decay functions of dye solutions in cuvettes. From the beginning, TCSPC was an amazingly sensitive and accurate technique with excellent time-resolution. However, acquisition times were relatively slow due to the low repetition rate of the light sources and the limited speed of the electronics of the 70s and early 80s. Moreover, TCSPC was intrinsically one-dimensional, i.e. limited to the recording of the waveform of a periodic light signal. Even with these limitations, it was a wonderful technique. More than 20 years have elapsed, and electronics and laser techniques have made impressive progress. The number of transistors on a single chip has approximately doubled every 18 months, resulting in a more than 1,000-fold increase in complexity and speed. The repetition rate and power of pulsed light sources have increased by about the same factor.

**Browsing through the Sultan's Bookshelves** Kristof D'hulster, 2021-07-12 Starting from 135 manuscripts that were once part of the library of the late Mamluk sultan Qāniṣawh al-Ghawrī (r. 1501–1516), this book challenges the dominant narrative of a post-court era, in which courts were increasingly marginalized in the field of adab. Rather than being the literary barren field that much of the Arabic and Arabic-centred sources, produced extra muros, would have us believe, it re-cognizes Qāniṣawh's court as a rich and vibrant literary site and a cosmopolitan hub in a burgeoning Turkic literary ecumene. It also re-centres the ruler himself within this court. No longer the passive object of panegyric or the source of patronage alone, Qāniṣawh has an authorial voice in his own right, one that is idiosyncratic yet in conversation with other voices. As such, while this book is first and foremost a book about books, it is one that consciously aspires to be more than that: a book about a library, and, ultimately, a book about the man behind the library, Qāniṣawh al-Ghawrī.

**Confident Pluralism** John D. Inazu, 2016-05-12 In *Confident Pluralism*, John D. Inazu analyzes the current state of the country, orients the contemporary United States within its broader history, and explores the ways that Americans can—and must—live together peaceably despite these deeply engrained differences. Pluralism is one of the founding creeds of the United States—yet America's society and legal system continues to face deep, unsolved structural problems in dealing with differing cultural anxieties, and minority viewpoints. Inazu not only argues that it is possible to cohabitate peacefully in this country, but also lays out realistic guidelines for our society and legal system to achieve the new American dream through civic practices that value toleration over protest, humility over defensiveness, and persuasion over coercion--cover page verso.

**Failing States, Collapsing Systems** Nafeez Mosaddeq Ahmed, 2016-11-26 This work executes a unique transdisciplinary methodology building on the author's previous book, *A User's Guide to the Crisis of Civilization: And How to Save it* (Pluto, 2010), which was the first peer-reviewed study to establish a social science framework for the integrated analysis of crises across climate, energy, food, economic, terror and the police state. Since the 2008 financial crash, the world has witnessed an unprecedented outbreak of social unrest in every major continent. Beginning with the birth of the Occupy movement and the Arab Spring, the eruption of civil disorder continues to wreak havoc unpredictably from Greece to Ukraine, from China to Thailand, from Brazil to Turkey, and beyond. Yet while policymakers and media observers have raced to keep up with events, they have largely missed the biophysical triggers of this new age of unrest – the end of the age of cheap fossil fuels, and its multiplying consequences for the Earth's climate,

industrial food production, and economic growth. This book for the first time develops an empirically-ground theoretical model of the complex interaction between biophysical processes and geopolitical crises, demonstrated through the analysis of a wide range of detailed case studies of historic, concurrent and probable state failures in the Middle East, Northwest Africa, South and Southeast Asia, Europe and North America. Geopolitical crises across these regions, Ahmed argues, are being driven by the proliferation of climate, food and economic crises which have at their root the common denominator of a fundamental and permanent disruption in the energy basis of industrial civilization. This inevitable energy transition, which will be completed well before the close of this century, entails a paradigm shift in the organization of civilization. Yet for this shift to result in a viable new way of life will require a fundamental epistemological shift recognizing humanity's embeddedness in the natural world. For this to be achieved, the stranglehold of conventional models achieved through the hegemony of establishment media reporting – dominated by fossil fuel interests – must be broken. While geopolitics cannot be simplistically reduced to the biophysical, this book shows that international relations today can only be understood by recognizing the extent to which the political is embedded in the biophysical. Although the book offers a rigorous scientific analysis, it is written in a clean, journalistic style to ensure readability and accessibility to a general audience. It will contain a large number of graphical illustrations concerning oil production data, population issues, the food price index, economic growth and debt, and other related issues to demonstrate the interconnections and correlations across key sectors.
