Spectacular Bid Peter Lee,2019-09-02 "Lee does a masterful job of telling the entire and real story of a racing star who overcame numerous obstacles . . . a book that you cannot put down!" —Brian Zipse, managing partner of Derby Day Racing On the morning of the 1979 Belmont Stakes, Spectacular Bid stepped on a safety pin in his stall, injuring his foot. He had impressively won the first two races—the Kentucky Derby and the Preakness—but finished third in the Belmont, most likely due to his injury, making him one win shy of becoming the sport's third straight Triple Crown champion. But that loss did not prevent him from becoming one of horse racing's greatest competitors. After taking two months to recover, the battleship gray colt would go on to win twenty-six of thirty races during his career, with two second-place finishes and one third. He was voted the tenth greatest Thoroughbred of the twentieth century according to Blood-Horse magazine, and A Century of Champions places him ninth in the world and third among North American horses—even ahead of the renowned Man o' War. This horse biography tells the story of the honest and not-so-glamorous colorful characters surrounding the champion—including Bud Delp, the brash and cocky trainer who was distrustful of the Kentucky establishment, and Ron Franklin, the nineteen-year-old jockey who buckled under the stress and pressure associated with fame—and how they witnessed firsthand the splendor and triumphs of Spectacular Bid. Including contemporary newspaper accounts of Bid's exploits and interviews with key players in his story, this is an encompassing look into the legacy of one of horse racing's true champions.

Recent Developments in Solar Energy Tom P. Hough,2007 Solar energy is derived ultimately from the sun. It can be divided into direct and indirect categories. Most energy sources on Earth are forms of indirect solar energy, although we usually don't think of them in that way. Coal, oil and natural gas derive from ancient biological material which took its energy from the sun (via plant photosynthesis) millions of years ago. All the energy in wood and foodstuffs also comes from the sun. Movement of the wind (which causes waves at sea), and the evaporation of water to form rainfall which accumulates in rivers and lakes, are also powered by the sun. Therefore, hydroelectric power and wind and wave power are forms of indirect solar energy. Direct solar energy is what we usually mean when we speak of solar power. Chr(45) is the use of sunlight for heating or generating electricity. Solar energy research and applications have been receiving increasing attention throughout the world as solar energy must play a much greater role in the energy mix in upcoming years. This book examines new research in this frontier field.
