International Standard Classification of Occupations International Labour Office, 2012 The International Standard Classification of Occupations 2008 (ISCO-08) is a four-level hierarchically structured classification that covers all jobs in the world. Developed with the benefit of accumulated national and international experience as well as the help of experts from many countries and agencies, ISCO-08 is fully supported by the international community as an accepted standard for international labour statistics. ISCO-08 classifies jobs into 436 unit groups. These unit groups are aggregated into 130 minor groups, 43 sub-major groups and 10 major groups, based on their similarity in terms of the skill level and skill specialisation required for the jobs. This allows the production of relatively detailed internationally comparable data as well as summary information for only 10 groups at the highest level of aggregation. Each group in the classification is designated by a title and code number and is associated with a definition that specifies the scope of the group. The classification is divided into two volumes: Volume I presents the structure and definitions of all groups in ISCO-08 and their correspondence with ISCO-88, which it supersedes, while Volume II provides an updated and expanded index of occupational titles and associated ISCO-08 and ISCO-88 codes.

**Problem Determination for WebSphere for z/OS** Rica Weller, Cleberson Calefi, Per Fremstad, Keith Jabcuga, Suresh Maddukuri, Kiet Nguyen, Robyn Nostalg, Rajesh Pericherla, 2006 IBM WebSphere Application Server for z/OS V6 is a complex product made up of many components. This IBM Redbooks publication focuses on the problems that you can experience with WebSphere for z/OS. It is intended for system programmers and administrators who need to identify, analyze, and fix problems efficiently so that they can deliver good support for the WebSphere environment. In Part 1, we provide an overview of problem determination methodology, what skills you need, where to find information about related topics, and how to communicate with IBM when a problem occurs. In Part 2, we describe the most common problem symptoms. Flow charts guide you through the problem analysis process step by step. Individual tasks and questions help you filter out irrelevant facts and find the problem area, so that you can identify the type, source, cause, and possibly a solution. In Part 3, we identify possible problem areas and arrange them into four phases that correspond with WebSphere for z/OS life cycle stages. We explain how to analyze the problems and provide valuable hints and tips for avoiding them. In Part 4, we provide means and tools for problem determination such as commands, logs, dumps, traces, and diagnostic tools. We describe other tools that can ease the day-to-day tasks and prevent problems. We also explain where to get these tools, show you how to use them, and provide examples. Please note that the additional material referenced in the text is not available from IBM.

**IBM Spectrum Scale and IBM Elastic Storage System Network Guide** Kedar Karmarkar, John Lewars, Sandeep R. Patil, Sandeep Naik, Kevin Gildea, Rakesh Chutke, Larry Coyne, IBM Redbooks, 2021-02-17 High-speed I/O workloads are moving away from the SAN to Ethernet and IBM® Spectrum Scale is pushing the network limits. The IBM Spectrum® Scale team discovered that many infrastructure Ethernet networks that were used for years to support various applications are not designed to provide a high-performance data path concurrently to many clients from many servers. IBM Spectrum Scale is not the first product to use Ethernet for storage access. Technologies, such as Fibre Channel over Ethernet (FCoE), scale out NAS, and IP connected storage (iSCSI and others) use Ethernet though IBM Spectrum Scale as the leader in parallel I/O performance,

which provides the best performance and value when used on a high-performance network. This IBM Redpaper publication is based on lessons that were learned in the field by deploying IBM Spectrum Scale on Ethernet and InfiniBand networks. This IBM Redpaper® publication answers several questions, such as, How can I prepare my network for high performance storage?, How do I know when I am ready?, and How can I tell what is wrong? when deploying IBM Spectrum Scale and IBM Elastic Storage® Server (ESS). This document can help IT architects get the design correct from the beginning of the process. It also can help the IBM Spectrum Scale administrator work effectively with the networking team to quickly resolve issues.

**Implementation Guide for IBM Elastic Storage System 5000** Brian Herr, Farida Yaragatti, Jay Vaddi, John Sing, Jonathan Turner, Luis Bolinches, Mary Jane Zajac, Puneet Chaudhary, Ravindra Sure, Ricardo D. Zamora Ruvalcaba, Robert Guthrie, Shradha Thakare, Stephen M Tee, Steve Duersch, Sukumar Vankadhara, Sumit Kumar, Todd M Tosseth, Van Smith, Vasfi Gucer, Wesley Jones, IBM Redbooks, 2020-12-08 This IBM® Redbooks® publication introduces and describes the IBM Elastic Storage® Server 5000 (ESS 5000) as a scalable, high-performance data and file management solution. The solution is built on proven IBM Spectrum® Scale technology, formerly IBM General Parallel File System (IBM GPFS). ESS is a modern implementation of software-defined storage, making it easier for you to deploy fast, highly scalable storage for AI and big data. With the lightning-fast NVMe storage technology and industry-leading file management capabilities of IBM Spectrum Scale, the ESS 3000 and ESS 5000 nodes can grow to over YB scalability and can be integrated into a federated global storage system. By consolidating storage requirements from the edge to the core data center — including Kubernetes and Red Hat OpenShift — IBM ESS can reduce inefficiency, lower acquisition costs, simplify storage management, eliminate data silos, support multiple demanding workloads, and deliver high performance throughout your organization. This book provides a technical overview of the ESS 5000 solution and helps you to plan the installation of the environment. We also explain the use cases where we believe it fits best. Our goal is to position this book as the starting point document for customers that would use the ESS 5000 as part of their IBM Spectrum Scale setups. This book is targeted toward technical professionals (consultants, technical support staff, IT Architects, and IT Specialists) who are responsible for delivering cost-effective storage solutions with ESS 5000.

*Financing Africa* Samuel Munzele Maimbo, Issa Faye, Thouraya Triki, 2011-09-07 *Financing Africa* takes stock of Africa's financial systems in light of recent changes in the global financial system --including the greater risk aversion of international investors, a shift in economic and financial powers towards emerging markets and the regulatory reform debate - and the increasing role of technology. Using a wider and more detailed array of data than previous publications, we observe a trend towards financial deepening, more stability and more inclusion leading up to the crisis; serious challenges, however, continue, including limited access to financial services, focus on short-term contracts and hidden fragility, related to weak regulatory frameworks, undue government interference and governance deficiencies. Our policy analysis therefore focuses on (i) expanding outreach, (ii) fostering long-term finance and (iii) improving regulation and supervision. We identify the positive role of innovation and competition, a stronger focus on non-traditional financial service providers, and more emphasis on demand-side constraints as priority areas for policy actions. Specifically, competition from new players outside the banking system, including telecomm companies can increase outreach with technological innovation that changes the economics of retail finance. Moving beyond national stock exchanges that are not sustainable in most African countries towards regional

solutions and over-the-counter trades can help foster long-term finance, as can addressing governance challenges in contractual savings institutions, including life insurance companies and pension funds. Finally, there is a need to look beyond supply-side constraints towards users of financial services, focusing more on financial literacy of households and firms, but also consumer protection. In formulating policy messages, we carefully distinguish between different country groupings, differentiating -- among others -- between low- and middle-income and small and larger economies, with a special focus on resource-based economies and post-conflict countries. This book reaches out to both policy makers concerned about a more inclusive and effective financial system and other stakeholders, including practitioners and development partners. With this book we aim to contribute to the on-going financial sector debate on Africa, with the ultimate goal of faster economic development and poverty reduction.
