Crossing the Rubicon Michael C. Ruppert,2004-09-15 The acclaimed investigative reporter and author of Confronting Collapse examines the global forces that led to 9/11 in this provocative exposé. The attacks of September 11, 2001 were accomplished through an amazing orchestration of logistics and personnel. Crossing the Rubicon examines how such a conspiracy was possible through an interdisciplinary analysis of petroleum, geopolitics, narco-traffic, intelligence and militarism—without which 9/11 cannot be understood. In reality, 9/11 and the resulting War on Terror are parts of a massive authoritarian response to an emerging economic crisis of unprecedented scale. Peak Oil—the beginning of the end for our industrial civilization—is driving the elites of American power to implement unthinkably draconian measures of repression, warfare and population control. Crossing the Rubicon is more than a story of corruption and greed. It is a map of the perilous terrain through which we are all now making our way.

Economic Risks of Climate Change Trevor Houser,Solomon Hsiang,Robert Kopp,Kate Larsen,Michael Delgado,Amir Jina,Michael Mastrandrea,Shashank Mohan,Robert Muir-Wood,D. J. Rasmussen,James Rising,Paul Wilson,2015-08-18

Climate change threatens the economy of the United States in myriad ways, including increased flooding and storm damage, altered crop yields, lost labor productivity, higher crime, reshaped public-health patterns, and strained energy systems, among many other effects. Combining the latest climate models, state-of-the-art econometric research on human responses to climate, and cutting-edge private-sector risk-assessment tools, *Economic Risks of Climate Change: An American Prospectus* crafts a game-changing profile of the economic risks of climate change in the United States. This prospectus is based on a critically acclaimed independent assessment of the economic risks posed by climate change commissioned by the Risky Business Project. With new contributions from Karen Fisher-Vanden, Michael Greenstone, Geoffrey Heal, Michael Oppenheimer, and Nicholas Stern and Bob Ward, as well as a foreword from Risky Business cochairs Michael Bloomberg, Henry Paulson, and Thomas Steyer, the book speaks to scientists, researchers, scholars, activists, and policy makers. It depicts the distribution of escalating climate-change risk across the country and assesses its effects on aspects of the economy as varied as hurricane damages and violent crime. Beautifully illustrated and accessibly written, this book is an essential tool for helping businesses and governments prepare for the future.

The Dawn of Astronomy J. Norman Lockyer, 2006-04-28 A pioneer in the fields of astrophysics and astro-archeology, J. Norman Lockyer believed that ancient Egyptian monuments were constructed in strict relation to the stars. In this celebrated study, he explores the relationship between astronomy and architecture in the age of the pharaohs. Lockyer addresses one of the many points already extensively investigated by Egyptologists: the chronology of the kings of Egypt. All experts are in accord regarding the identity of the first monarch, but they cannot agree upon the dates of his reign within a thousand years. The author contends that by applying a knowledge of astronomy to the actual site orientation of the region's pyramids and temples, accurate dating can be achieved. In order to accomplish this, Lockyer had to determine the level of the ancient Egyptian ideas of astronomy. Some of his inferences have been invalidated by subsequent scholarship, but many of his other conclusions stand firm and continue to provide sensational leads into contemporary understanding of archaic astronomy.

Irrationality Stuart Sutherland, 2007 Why do qualified professional make wrong decisions that cause enormous harm to others? And why do you sit through a boring play just because the tickets were expensive? Drawing on a mass of intriguing research, Stuart Sutherland analyses the causes of irrationality, demonstrating that the trait is present in all of us.

Youth at Risk in Latin America and the Caribbean , 2008-01-01 Youth at Risk in Latin America provides evidence-based guidance to policymakers that will help increase the effectiveness of their youth investment program. Drawing on the authors' detailed analyses, the book describes twenty-three policies and

programs that youth development experts agree are the basis of a quality youth development portfolio, from early childhood development programs to parent training to cash transfers for positive behaviors. It also lays out strategies for implementing this effective youth portfolio in a budget-constrained environment by reallocation of resources away from.

Evaluating User Experience in Games Regina Bernhaupt,2010-04-12 It was a pleasure to provide an introduction to a new volume on user experience evaluation in games. The scope, depth, and diversity of the work here is amazing. It attests to the growing popularity of games and the increasing importance developing a range of theories, methods, and scales to evaluate them. This evolution is driven by the cost and complexity of games being developed today. It is also driven by the need to broaden the appeal of games. Many of the approaches described here are enabled by new tools and techniques. This book (along with a few others) represents a watershed in game evaluation and understanding. The field of game evaluation has truly "come of age". The broader field of HCI can begin to look toward game evaluation for fresh, critical, and sophisticated thinking about design evaluation and product development. They can also look to games for groundbreaking case studies of evaluation of products. I'll briefly summarize each chapter below and provide some commentary. In conclusion, I will mention a few common themes and offer some challenges. Discussion In Chapter 1, User Experience Evaluation in Entertainment, Bernhaupt gives an overview and presents a general framework on methods currently used for user experience evaluation. The methods presented in the following chapters are summarized and thus allow the reader to quickly assess the right set of methods that will help to evaluate the game under development.

Prison Conditions in South Africa Human Rights Watch (Organization),1994 While visiting over twenty prisons as well as lockups in at least five different cities throughout South Africa, we found significant improvements had been made since the political climate began to change in 1990. Nevertheless, South Africa's prisoner-to-population ratio is among the highest in the world, and many aspects of prison life remain depressingly unchanged from the years of official apartheid. South African prisons are places of extreme violence, where assaults on prisoners by guards or fellow inmates are common and often fatal.

Fundamental Physics for Probing and Imaging Wade Allison,2006-10-26 Physics has reduced fear and increased safety for society, largely by extending the power to see. The methods used are magnetic resonance, ionising radiation and sound, with their extensions. This textbook expounds the fundamental physics of these. It follows how they are applied by modern technology to seeing in clinical medicine including therapy and in other spheres of human activity such as archaeology, geophysics, security and navigation. By taking a broad view over the whole field, the book encourages comparisons, underlines the importance of public education and reaches fresh conclusions of some political importance concerning safety. This textbook has developed from a course given to third year students at Oxford and is written so that it can be used coherently as a basis for shorter courses by omitting certain chapters.

Computational Methods for Risk Management in Economics and Finance Marina Resta,2020-04-02 At present, computational methods have received considerable

attention in economics and finance as an alternative to conventional analytical and numerical paradigms. This Special Issue brings together both theoretical and application-oriented contributions, with a focus on the use of computational techniques in finance and economics. Examined topics span on issues at the center of the literature debate, with an eye not only on technical and theoretical aspects but also very practical cases.
