*Assessing the Costs of Climate Change and Adaptation in South Asia* Asian

Development Bank,2014-06-01 This report synthesizes the results of country and sector studies on the economic costs and benefits of unilateral and regional actions on climate change in the Asian Development Bank's six South Asia developing members, namely Bangladesh, Bhutan, India, the Maldives, Nepal, and Sri Lanka. The study takes into account the different scenarios and impacts projected across vulnerable sectors and estimates the total economic loss throughout the 21st century and amount of funding required for adaptation measures to avert such potential losses. It is envisioned to strengthen decision-making capacities and improve understanding of the economics of climate change for the countries in South Asia.

Managing Openness Mona Haddad,Ben Shepherd,2011 The global financial crisis triggered a broad reassessment of economic integration policies in developed and developing countries worldwide. The crisis-induced collapse in trade was the sharpest ever since World War II, affecting all countries and all product categories. A huge shock to the trading system, combined with severe macroeconomic instability, makes it natural for policymakers to call into question the basic underlying assumptions of trade liberalization and openness. In particular, outward-oriented or export-led growth strategies are being reassessed as openness is increasingly associated with greater volatility. However, it is crucial not to lose sight of the dynamic benefits that openness can offer. Examples include technology transfer, increased competitive pressure that reduces markups and improves efficiency, and economies of scale. The real question is how to manage outward-oriented strategies so as to maximize the benefits of openness while minimizing risks. This book aims to contribute to this important and ongoing policy debate, bringing together recent empirical work on the trade collapse, its causes and consequences, and the broader trade policy agenda in the post-crisis environment. It addresses critical policy issues revolving around the topic of outward-oriented growth strategy, including policy instruments that help manage risks associated with outward-orientation, lessons learned from the crisis for particular countries and regions, and how emerging trade policy issues such as climate change, commodities, global production networking, and migration affect the prospects for recovery and outward-oriented growth.

*Aerosol Science* Ian Colbeck, Mihalis Lazaridis, 2014-02-03 AEROSOL SCIENCE TECHNOLOGY AND APPLICATIONS Aerosols influence many areas of our daily life. They are at the core of environmental problems such as global warming, photochemical smog and poor air quality. They can also have diverse effects on human health, where exposure occurs in both outdoor and indoor environments. However, aerosols can have beneficial effects too; the delivery of drugs to the lungs, the delivery of fuels for combustion and the production of nanomaterials all rely on aerosols. Advances in particle measurement technologies have made it possible to take advantage of rapid changes in both particle size and concentration. Likewise, aerosols can now be produced in a controlled fashion. Reviewing many technological applications together with the current scientific status of aerosol modelling and measurements, this book includes: Satellite aerosol remote sensing The effects of aerosols on climate change Air pollution and health Pharmaceutical aerosols and pulmonary drug delivery Bioaerosols and hospital infections Particle emissions from vehicles The safety of emerging nanomaterials Radioactive aerosols: tracers of atmospheric processes With the importance of this topic brought to the public's attention after the eruption of the Icelandic volcano Eyjafjallajökull, this book provides a timely, concise and accessible overview of the many facets of aerosol science.

*Functional Gradient Materials and Surface Layers Prepared by Fine Particles Technology* Marie-Isabelle Baraton, Irina V. Uvarova, 2012-12-06 The NATO Advanced Study Institute on Functional Gradient Materials and Surface Layers Prepared by Fine Particles Technology was held in Kiev (Ukraine) on June 18- 28, 2000 where more than 90 participants, ranging

from Ph.D. students to experienced senior scientists, met and exchanged ideas. This meeting was aimed at stimulating the research work across traditional disciplinary lines by bringing together scientists from diverse research areas related to functional gradient materials and surface layers. It also intended to give opportunities for initiating collaborative works between scientists from NATO and Partner countries and to trigger fruitful and exciting discussions between experienced and young researchers. In this respect, this NATO-ASI has been quite successful. The term of functional gradient materials which originates from Japan in the 1980's describes a class of engineering materials with spatially inhomogeneous microstructures and properties (MRS Bulletin, 1995,20, N°1). These materials can be successfully utilized in various applications like electronic devices, optical films, anti wear and anti-corrosion coatings, thermal barrier coatings, biomaterials, to name only a few. Although these functional gradient materials are not fundamentally new, the use of nanoparticles in their fabrication and in surface layers as well has greatly improved their performances to meet challenging requirements for industrial applications.
