Creating Smart Virtual Appliances with IBM Image Construction and Composition Tool Greg Hurlebaus,Rashed Ferdous,John Jacobson,Li-Fang Lee,Jarek Miszczyk,Pat Nickel,David Peraza,Moises Romo,Kerry Staples,IBM Redbooks,2013-07-24 In a traditional deployment model, software is installed on a physical server, and it is configured for the particular data center environment. The cloud deployment model requires that the dependency on a

specific hardware configuration is severed. This IBM®
Redbooks® publication guides you through the transition
from the traditional application deployment model to the
cloud-friendly deployment model. It explains how to achieve
these goals by packaging the software stacks into industry
standard virtual appliances. A key part of this transition
involves using the IBM Image Construction and Composition
Tool. This tool is the IBM tool for creating virtualized
workloads that target several private cloud deployment
platforms, including platforms from IBM and not from IBM.
In fact, this tool is unique in its ability to support such a
wide range of cloud offerings. It is also the only tool in the
marketplace that can create virtual appliances for both x86
and IBM Power hardware architectures. This book provides
an in-depth look at the capabilities and internal workings of
Image Construction and Composition Tool. It focuses on the
capabilities of this tool, which target the virtualization and
cloud offerings of IBM Systems and Technology Group.
These offerings include IBM Systems Director VMControlTM,
IBM SmartCloud® Entry, and IBM PureFlexTM System with
IBM Flex System ManagerTM appliance. The Image
Construction and Composition Tool also has a much richer
set of capabilities. Specifically, it supports IBM Workload
Deployer, IBM PureApplicationTM Systems, and IBM
SmartCloud Provisioning. This publication targets software
architects, cloud solutions architects, and cloud
administrators. Its goal is to provide you with the expert-
level skills required to package the existing and newly
created applications into self-configurable, smart virtual
appliances. Related publication: Smart Virtual Appliances

   The Debian Administrator's Handbook Raphaël Hertzog,Roland Mas,2015-10-21 Debian GNU/Linux, a very popular non-commercial Linux distribution, is known for its reliability and richness. Built and maintained by an impressive network of thousands of developers throughout the world, the Debian project is cemented by its social contract. This foundation text defines the project's objective: fulfilling the needs of users with a 100% free operating system. The success of Debian and of its ecosystem of derivative distributions (with Ubuntu at the forefront) means that an increasing number of

administrators are exposed to Debian's technologies. This Debian Administrator's Handbook, which has been entirely updated for Debian 8 "Jessie", builds on the success of its 6 previous editions. Accessible to all, this book teaches the essentials to anyone who wants to become an effective and independent Debian GNU/Linux administrator. It covers all the topics that a competent Linux administrator should master, from installation to updating the system, creating packages and compiling the kernel, but also monitoring, backup and migration, without forgetting advanced topics such as setting up SELinux or AppArmor to secure services, automated installations, or virtualization with Xen, KVM or LXC. This book is not only designed for professional system administrators. Anyone who uses Debian or Ubuntu on their own computer is de facto an administrator and will find tremendous value in knowing more about how their system works. Being able to understand and resolve problems will save you invaluable time. Learn more about the book on its official website: debian-handbook.info

Decision Support Systems for Weed Management Guillermo R. Chantre,José L. González-Andújar,2020-07-31 Weed management Decision Support Systems (DSS) are increasingly important computer-based tools for modern agriculture. Nowadays, extensive agriculture has become highly dependent on external inputs and both economic costs, as well the negative environmental impact of agricultural activities, demands knowledge-based technology for the optimization and protection of non-renewable resources. In this context, weed management strategies should aim to maximize economic profit by preserving and enhancing agricultural systems. Although previous contributions focusing on weed biology and weed management provide valuable insight on many aspects of weed species ecology and practical guides for weed control,

no attempts have been made to highlight the forthcoming importance of DSS in weed management. This book is a first attempt to integrate `concepts and practice' providing a novel guide to the state-of-art of DSS and the future prospects which hopefully would be of interest to higher-level students, academics and professionals in related areas.
