Lake Pavin Télesphore Sime-Ngando,Pierre Boivin,Emmanuel Chapron,Didier Jezequel,Michel Meybeck,2016-10-31 This book represents the first multidisciplinary scientific work on a deep volcanic maar lake in comparison with other similar temperate lakes. The syntheses of the main characteristics of Lake Pavin are, for the first time, set in a firmer footing comparative approach, encompassing regional, national, European and international aquatic science contexts. It is a unique lake because of its permanently anoxic monimolimnion, and furthermore, because of its small surface area, its substantially low human influence, and by the fact that it does not have a river inflow. The book reflects the scientific research done on the general limnology, history, origin, volcanology and geological environment as well as on the geochemistry and biogeochemical cycles. Other chapters focus on the biology and microbial ecology whereas the sedimentology and paleolimnology are also given attention. This volume will be of special interest to researchers and advanced students, primarily in the fields of limnology, biogeochemistry, and aquatic ecology.

Russia's New Authoritarianism Lewis David G. Lewis,2020-03-27 David G. Lewis explores Russia's political system under Putin by unpacking the ideological paradigm that underpins it. Robotics and Automation Handbook Thomas R. Kurfess,2018-10-03 As the capability and utility of robots has increased dramatically with new technology, robotic systems can perform tasks that are physically dangerous for humans, repetitive in nature, or require increased accuracy, precision, and sterile conditions to radically minimize human error. The Robotics and Automation Handbook addresses the major aspects of designing, fabricating, and enabling robotic systems and their various applications. It presents kinetic and dynamic methods for analyzing robotic systems, considering factors such as force and torque. From these analyses, the book develops several controls approaches, including servo actuation, hybrid control, and trajectory planning. Design aspects include determining specifications for a robot, determining its configuration, and utilizing sensors and actuators. The featured applications focus on how the specific difficulties are overcome in the development of the robotic system. With the ability to increase human safety and precision in applications ranging from handling hazardous materials and exploring extreme environments to manufacturing and medicine, the uses for robots are growing steadily. The Robotics and Automation Handbook provides a solid foundation for engineers and scientists interested in designing, fabricating, or utilizing robotic systems.

Understanding Oil and Gas Shows and Seals in the Search for Hydrocarbons John Dolson,2016-06-15 This book explains in detail how to use oil and gas show information to find hydrocarbons. It covers the basics of exploration methodologies, drilling and mud systems, cuttings and mud gas show evaluation, fundamental log analysis, the pitfalls of log-calculated water saturations, and a complete overview of the use of pressures to understand traps and migration, hydrodynamics, and seal and reservoir quantification using capillary pressure. Also included are techniques for quickly generating pseudo-capillary pressure curves from simple porosity/permeability data, with examples of how to build spreadsheets in Excel, and a complete treatment of fluid inclusion analysis and fluid inclusion stratigraphy to map migration pathways. In addition, petroleum systems modeling and fundamental source rock geochemistry are discussed in depth, particularly in the context of unconventional source rock evaluation and screening tools for entering new plays. The book is heavily illustrated with numerous examples and case histories from the author's 37 years of exploration experience. The topics covered in this book will give any young geoscientist a quick start on a successful career and serve as a refresher for the more experienced explorer.

Pretending Democracy Jeenah, Na'eem,2018-06-14 This powerful collection from an international mix of respected academics, newer voices and political activists explores the place of Israel as a Jewish state in today's modern world – a world in which identities, citizenship and human rights are defined in increasingly cosmopolitan and inclusive ways. Offering compelling and comprehensive arguments as to why Israel falls into the category of an ethnocentric state, the contributions to this volume explore four central themes. They reveal the reality behind Israel's founding myths. They document the experiences of some of those who have fallen victim to this ethnic state. Then, they draw comparisons with other ethnic states, notably South Africa, and finally, they point towards the radical hope of achieving a single nation, united, peaceful and just. Unpacking both Jewish and Palestinian nationalism, the nation-state, and ethnic nationalism, this fascinating collection offers new insights into one of the world's most intractable conflicts. It will appeal not only to scholars and teachers, but to anyone interested in the history, politics, anthropology and legal standing of Palestine-Israel. Contributors: Ali Abunimah, Neville Alexander, Max du Plessis, Steven Friedman, Daryl Glaser, Ran Greenstein, Heidi Grunebaum, Adam Habib, Na'eem Jeenah, Ronnie Kasrils, Smadar Lavie, Fouad Moughrabi, Nadim N Rouhana, Shlomo Sand, Avi Shlaim, Azzam Tamimi,
