Application Development for IBM CICS Web Services O'Grady James, Ian Burnett, Jim Harrison, San Yong Liu, Xue Yong Zhang, IBM Redbooks, 2015-01-27 This IBM® Redbooks® publication focuses on developing Web service applications in IBM CICS®. It takes the broad view of developing and modernizing CICS applications for XML, Web services, SOAP, and SOA support, and lays out a reference architecture for developing these kinds of applications. We start by discussing Web services in general, then review how CICS implements Web services. We offer an overview of different development approaches: bottom-up, top-down, and meet-in-the-middle. We then look at how you would go about exposing a CICS application as a Web service provider, again looking at the different approaches. The book then steps through the process of creating a CICS Web service requester. We follow this by looking at CICS application aggregation (including 3270

applications) with IBM Rational® Application Developer for IBM System z® and how to implement CICS Web Services using CICS Cloud technology. The first part is concluded with hints and tips to help you when implementing this technology. Part two of this publication provides performance figures for a basic Web service. We investigate some common variables and examine their effects on the performance of CICS as both a requester and provider of Web services.

Teaching and Working with Children who Have Emotional and Behavioral Challenges

Mary M. Quinn, David Osher, Cynthia L. Warger, Tom V. Hanley, 2000 This guidebook is designed to help educators and others in their efforts to work with students with emotional and behavioral difficulties (EBD). Chapter 1 provides an overview of the needs and problems presented by such students. Chapter 2 contains basic information to help provide an enhanced understanding of students with EBD. Causes of emotional and behavioral problems, the educators role in identifying and referring students, documenting behaviors, cultural differences, drug therapy, and getting support from others are discussed. Chapter 3 contains strategies for structuring curriculum and instruction so that they have the most positive impact possible on student performance. The following chapter offers tips and ideas for strengthening classroom management practices. It also describes techniques to help educators interact with students in a manner that creates a positive and supportive classroom environment. Because of the success of instructional and classroom management programs can be enhanced by colleagues, families, and others, chapter 5 describes promising practices that many schools and districts now use to support classroom teachers and other instructional staff.

The final chapter lists supplementary sources and contact information for relevant organizations. Appendices include federal regulations on the discipline of students with EBD and a glossary. (CR)

z/VSE Using DB2 on Linux for System z Helmut Hellner,Ingo Franzki,Martin Kammerer,Roopa Mahendra,Wilhelm Mild,IBM Redbooks,2010-02-03 Data is one the most critical and valuable assets of a business. Critical strategic decisions can be made more quickly and effectively when they are based on complete, accurate, and timely operational data. From this point of view, it is important to have an enterprise data management architecture that supports a flexible global view of the business. Many environments today are heterogeneous with a high quantity and diversity of data. In this IBM® Redbooks® publication, we help enterprise architects and IT managers with these environments make decisions for a centralized database or data warehouse. We recommend a centralized data management environment on Linux® on System z®. We include guidance for IBM z/VSE™ and Linux specialists to reorganize existing IBM DB2® VSE data and build a database environment with continuous operation in Linux on System z. We begin this book by describing the possibilities and advantages of enterprise data management and different technical ways to realize it. Then we discuss planning, which is important for setting the foundation of the architecture that is implemented. We explain the hardware considerations for capacity and performance planning. For the z/VSE system and Linux on System z, we describe considerations for operation in a logical partition (LPAR) and in a virtualized environment with IBM z/VM®. In addition, we discuss the disk behavior for

different workloads, storage dependencies, network connections, and DB2 database considerations. We also guide you in customizing the DB2 server for z/VSE, z/VM, and DB2 on Linux to allow existing z/VSE and z/VM applications to access the database on Linux on System z. We include the data migration, application considerations, dependencies, compatibility, monitoring, and tuning possibilities in such an environment.

Adaptive Leadership Jim Highsmith, 2013-11-01 Lessons from Agile's First Decade...Leadership for Agile's Next Decade The agile software movement has now been around for a full decade. As coauthor of the original Agile Manifesto, Jim Highsmith has been at its heart since the beginning. He's spent the past decade helping hundreds of organizations transition to agile/lean. When it comes to agile, he's seen it all—in a variety of industries, worldwide. Now, in *Adaptive Leadership*, he has compiled, updated, and extended his best writings about agile and lean methods for a management audience. Highsmith doesn't just reveal what's working and what isn't; he offers a powerful new vision for extending agility across the enterprise. Drawing on what's been learned in application development, this guide shows how to use adaptive leadership techniques to transform the way you deliver complete solutions, whatever form they take. You'll learn how enterprise agility can enable the ambitious organizational missions that matter most; how leaders can deliver a continuous stream of value; how to think disruptively about opportunities, and how to respond quickly by creating more adaptive, innovative organizations. Coverage includes Discovering and executing new business opportunities

far more quickly Delivering complete business solutions earlier, and iterating them more often Organizing for innovation, and systematically managing opportunity flow Clarifying the degree of strategic, portfolio, and operational agility you need, and focusing on your highest-value transformations Creating cultures that actually can adapt and learn Reinventing the roots of agile value and values Understanding IT's changing value proposition, and retraining your people accordingly Integrating economics, products, and social responsibility Choosing metrics that guide agility, not counterproductive traditional metrics Understanding the financial implications of technical debt Optimizing business value by doing less-and guiding the process with "NOT to do" lists Speculating intelligently when you can't plan away uncertainty Customizing management to each project's needs (because not all projects should be equally agile)

Dilemmas of hydropower development in Vietnam Ty Pham Huu, 2015-01-13

Hydropower is one of the biggest controversies in Vietnam in recent decades because of its adverse environmental and social consequences, especially negative impacts on displaced people who make way for hydropower dam construction. This book explains the controversies related to hydropower development in Vietnam in order to make policy recommendations for equitable and sustainable development. The book focuses on the analysis of emerging issues, such as land acquisition, compensation for losses, displacement and resettlement, support for livelihood development, and benefit sharing from hydropower development. The analysis emphasizes the role of different stakeholders in the decision-making process for hydropower development in Vietnam as a means to find a better governance model.

z/VM and Linux Operations for z/OS System Programmers Lydia Parziale,Omar Badreddin,Roy P Costa,Rodrigo Ceron Ferreira de Castro,Marian Gasparovic,Kenneth P Haas,Guillaume Lasmayous,Raymond Van Deurs,IBM Redbooks,2008-10-28 This IBM Redbooks publication discusses z/VM and Linux operations from the perspective of the z/OS programmer or system programmer. Although other books have been written about many of these topics, this book gives enough information about each topic to describe z/VM and Linux on IBM System z operations to somebody who is new to both environments. This book is intended for z/OS programmers and system programmers who are transitioning to the z/VM and Linux on System z environments and who want a translation guide for assistance. We base this book on our experiences using System z10 Enterprise Edition, z/VM version 5.3 RSU 0701, and Novell SUSE Linux Enterprise Server (SLES) 10 on System z.

The Political Economy of Democracy and Tyranny Norman Schofield, 2009 One theme that has emerged from the recent literature on political economy concerns the transition to democracy: why would dominant elites give up oligarchic power? This book addresses the fundamental question of democratic stability and the collapse of tyranny by considering a formal model of democracy and tyranny. The formal model is used to study elections in developed polities such as the United States, the United Kingdom, the Netherlands, Canada, and Israel, as well as complex developing polities such as Turkey. The key idea is that activist groups may offer resources to political candidates if they in turn adjust their policies in favor of the interest group. In polities that use a first past the post electoral system, such as the US, the bargaining between interest groups and candidates creates a tendency for activist groups to coalesce; in polities such as Israel and the Netherlands, where the electoral system is very proportional, there may be little tendency for activist coalescence. A further feature of the model is that candidates, or political leaders, like Barack Obama, with high intrinsic charisma, or valence, will be attracted to the electoral center, while less charismatic leaders will move to the electoral periphery. This aspect of the model is used to compare the position taking and exercise of power of authoritarian leaders in Portugal, Argentina and the Soviet Union. The final chapter of the book suggests that the chaos that may be induced by climate change and rapid population growth can only be addressed by concerted action directed by a

charismatic leader of the Atlantic democracies.

The Art of Network Architecture Russ White, Denise Donohue, 2014-04-02 The Art of Network Architecture Business-Driven Design The business-centered, business-driven guide to architecting and evolving networks The Art of Network Architecture is the first book that places business needs and capabilities at the center of the process of architecting and evolving networks. Two leading enterprise network architects help you craft solutions that are fully aligned with business strategy, smoothly accommodate change, and maximize future flexibility. Russ White and Denise Donohue guide network designers in asking and answering the crucial questions that lead to elegant, high-value solutions. Carefully blending business and technical concerns, they show how to optimize all network interactions involving flow, time, and people. The authors review important links between business requirements and network design, helping you capture the information you need to design effectively. They introduce today's most useful models and frameworks, fully addressing modularity, resilience, security, and management. Next, they drill down into network structure and topology, covering virtualization, overlays, modern routing choices, and highly complex network environments. In the final section, the authors integrate all these ideas to consider four realistic design challenges: user mobility, cloud services, Software Defined Networking (SDN), and today's radically new data center environments. • Understand how your choices of technologies and design paradigms will impact your business • Customize designs to improve workflows, support BYOD, and ensure business continuity • Use modularity, simplicity, and network management to prepare for rapid change • Build resilience by addressing human factors and redundancy •

Design for security, hardening networks without making them brittle • Minimize network management pain, and maximize gain • Compare topologies and their tradeoffs • Consider the implications of network virtualization, and walk through an MPLS-based L3VPN example • Choose routing protocols in the context of business and IT requirements • Maximize mobility via ILNP, LISP, Mobile IP, host routing, MANET, and/or DDNS • Learn about the challenges of removing and changing services hosted in cloud environments • Understand the opportunities and risks presented by SDNs • Effectively design data center control planes and topologies

Cairo Ahdaf Soueif, 2012-01-19 Over the past few months I have delivered lectures, presentations and interviews on the Egyptian Revolution. I have had overflowing houses everywhere, been stopped by old ladies in the street and had my hand shaken by numerous taxi drivers and shopkeepers. And all because I'm Egyptian and the glitter of Tahrir is upon me. They wanted me to talk to them, to tell them stories about it, to tell them how, on the 28th of January when we took the Square and The People torched the headquarters of the hated ruling National Democratic Party, The (same) People formed a human chain to protect the Antiquities Museum and demanded an official handover to the military; to tell them how, on Wednesday, February 2nd, as The People defended themselves against the invading thug militias and fought pitched battles at the entrance to the Square in the shadow of the Antiquities Museum, The (same) People at the centre of the square debated political structures and laughed at stand-up comics and distributed sandwiches and water; to tell them of the chants and the poetry and the songs, of how we danced and waved at the F16s that our President flew over us. People everywhere want to

make this Revolution their own, and we in Egypt want to share it. Ahdaf Soueif - novelist, commentator, activist - navigates her history of Cairo and her journey through the Revolution that's redrawing its future. Through a map of stories drawn from private history and public record Soueif charts a story of the Revolution that is both intimately hers and publicly Egyptian. Ahdaf Soueif was born and brought up in Cairo. When the Egyptian Revolution of 2011 erupted on January 25th, she, along with thousands of others, called Tahrir Square home for eighteen days. She reported for the world's media and did - like everyone else - whatever she could.

One Billion Hungry Gordon Conway, 2012-10-15 Hunger is a daily reality for a billion people. More than six decades after the technological discoveries that led to the Green Revolution aimed at ending world hunger, regular food shortages, malnutrition, and poverty still plague vast swaths of the world. And with increasing food prices, climate change, resource inequality, and an ever-increasing global population, the future holds further challenges. In *One Billion Hungry*, Sir Gordon Conway, one of the world's foremost experts on global food needs, explains the many interrelated issues critical to our global food supply from the science of agricultural advances to the politics of food security. He expands the discussion begun in his influential *The Doubly Green Revolution: Food for All in the Twenty-First Century*, emphasizing the essential combination of increased food production, environmental stability, and poverty reduction necessary to end endemic hunger on our planet. Conway addresses a series of urgent questions about global hunger:

- How we will feed a growing global population in the face of a wide range of adverse factors, including climate change?
- What contributions can the social and natural

sciences make in finding solutions? • And how can we engage both government and the private sector to apply these solutions and achieve significant impact in the lives of the poor? Conway succeeds in sharing his informed optimism about our collective ability to address these fundamental challenges if we use technology paired with sustainable practices and strategic planning. Beginning with a definition of hunger and how it is calculated, and moving through issues topically both detailed and comprehensive, each chapter focuses on specific challenges and solutions, ranging in scope from the farmer's daily life to the global movement of food, money, and ideas. Drawing on the latest scientific research and the results of projects around the world, Conway addresses the concepts and realities of our global food needs: the legacy of the Green Revolution; the impact of market forces on food availability; the promise and perils of genetically modified foods; agricultural innovation in regard to crops, livestock, pest control, soil, and water; and the need to both adapt to and slow the rate of climate change. *One Billion Hungry* will be welcomed by all readers seeking a multifaceted understanding of our global food supply, food security, international agricultural development, and sustainability.

The Hacker's Dictionary Eric S. Raymond, 2017-06-19 This document is a collection of slang terms used by various subcultures of computer hackers. Though some technical material is included for background and flavor, it is not a technical dictionary; what we describe here is the language hackers use among themselves for fun, social communication, and technical debate.

Virtual, Augmented, and Mixed Realities in Education Dejian Liu, Chris Dede, Ronghuai Huang, John Richards, 2017-11-13 This book describes the current state of

the art of various types of immersive learning: in research, in practice, and in the marketplace. It discusses advanced approaches in the design and development for various forms of immersive learning environments, and also the emerging innovations in assessment and research in the field. In addition, it demonstrates the opportunities and challenges in implementing advances in VR and immersion at scale in formal and informal learning. We are living in a time of rapid advances in terms of both the capabilities and the cost of virtual reality, multi-user virtual environments, and various forms of mixed reality. These new media potentially offer extraordinary opportunities for enhancing both motivation and learning across a range of subject areas, student developmental levels, and educational settings. With the development of practical and affordable virtual reality and mixed reality, people now have the chance to experience immersive learning both in classrooms and informally in homes, libraries, and community centers. The book appeals to a broad readership including teachers, administrators, scholars, policy makers, instructional designers, evaluators and industry leaders.

The Indian Rivers Dhruv Sen Singh, 2017-12-30 The book presents geomorphological studies of the major river basins – the Indus, Ganga and Brahmaputra and their tributaries. Besides major basins, the book explores peninsular rivers and other rivers state-by-state. All types of rivers, i.e. snow-fed, rain-fed and groundwater-fed rivers are explained together in geological framework. Rivers are lifeline and understanding of the rivers, their dynamics, science and socio-economic aspect is very important. However, different sources provide different data base for rivers. But a book which explains all major rivers of a country at a single place was not yet available. This book is the first book

of its kind in the world which provides expert opinion on all major rivers of a country like India. This book complements works in these areas for the last two to three decades on major rivers of India by eminent professors and scientists from different universities, IITs and Indian research institutions. The information presented in the book would appeal to a wider readership from students, teachers to researchers and planners engaged in developmental work and also to common people of the society concerned with awareness about rivers.
