Special Topics in Information Technology Angelo Geraci,2021-02-26 This open access book presents thirteen outstanding doctoral dissertations in Information Technology from the Department of Electronics, Information and Bioengineering, Politecnico di Milano, Italy. Information Technology has always been highly interdisciplinary, as many aspects have to be considered in IT systems. The doctoral studies program in IT at Politecnico di Milano emphasizes this interdisciplinary nature, which is becoming more and more important in recent technological advances, in collaborative projects, and in the education of young researchers. Accordingly, the focus of advanced research is on pursuing a rigorous approach to specific research topics starting from a broad background in various areas of Information Technology, especially Computer Science and Engineering, Electronics, Systems and Control, and Telecommunications. Each year, more than 50 PhDs graduate from the program. This book gathers the outcomes of the thirteen best theses defended in 2019-20 and selected for the IT PhD Award. Each of the authors provides a chapter summarizing his/her findings, including an introduction, description of methods, main achievements and future work on the topic. Hence, the book provides a cutting-edge overview of the latest research trends in Information Technology at Politecnico di Milano, presented in an easy-to-read format that will also appeal to non-

specialists.

Aid for Trade at a Glance 2019 Economic Diversification and Empowerment OECD,World Trade Organization,2019-07-11 This edition analyses how trade can contribute to economic diversification and empowerment, with a focus on eliminating extreme poverty, particularly through the effective participation of women and youth. It shows how aid for trade can contribute to that objective by addressing supply-side capacity and trade-related infrastructure constraints, including for micro-, small- and medium-sized enterprises notably in rural areas.

Fundamentals of Neurosurgery Andrei Fernandes Joaquim,Enrico Ghizoni,Helder Tedeschi,Mauro Augusto Tostes Ferreira,2019-07-12 The aim of this book is to provide clinicians and medical students with basic knowledge of the most common neurosurgical disorders. There is a vast array of signs and symptoms that every clinician should recognize as neurosurgical affectations, allowing them to identify when to refer the patient to a neurosurgeon. In this text, the editors intend to

bridge the gap between clinical medicine and neurosurgery, making neurosurgical practice understandable to a wider medical public. The book provides a smooth transition from neuroanatomy, neurophysiology and neurological examination to neurosurgery, focusing more on the knowledge underlying neurosurgical practice rather than on surgical technique. The core of the book is composed of chapters discussing each of the most important medical conditions that deserve neurosurgical intervention, providing key information on diagnosis, clinical aspects, disease management, surgical procedures and prognosis. Moreover, complementary discussion of the frontiers and advances in neurosurgery are also covered. In this sense, this book has two main goals and intended audiences. First, and primarily, it is intended for clinicians in a wide array of non-surgical medical specialties (such as general practitioners, neurologists, pediatricians, oncologists and others) aiming to give an overview on important characteristics and initial management of the most prevalent disorders treated by neurosurgeons. Second, and to a lesser degree, it is intended to be used as a practical guide for medical students who are initiating their study in neurosurgical sciences. Fundamentals of Neurosurgery – A Guide for Clinicians and Medical Students intends to be a comprehensive guide for all non-neurosurgeons who want to broaden their knowledge of neurosurgery.

Combinatorial Methods for Chemical and Biological Sensors Radislav A. Potyrailo,Vladimir M. Mirsky,2009-03-21 Chemical sensors are in high

demand for applications as varied as water pollution detection, medical diagnostics, and battlefield air analysis. Designing the next generation of sensors requires an interdisciplinary approach. The book provides a critical analysis of new opportunities in sensor materials research that have been opened up with the use of combinatorial and high-throughput technologies, with emphasis on experimental techniques. For a view of component selection with a more computational perspective, readers may refer to the complementary volume of Integrated Analytical Systems edited by M. Ryan et al., entitled “Computational Methods for Sensor Material Selection”.

Financing Africa Samuel Munzele Maimbo,Issa Faye,Thouraya Triki,2011-09-07 Financing Africa

takes stock of Africa's financial systems in light of recent changes in the global financial system -- including the greater risk aversion of international investors, a shift in economic and financial powers towards emerging markets and the regulatory reform debate - and the increasing role of technology. Using a wider and more detailed array of data than previous publications, we observe a trend towards financial deepening, more stability and more inclusion leading up to the crisis; serious challenges, however, continue, including limited access to financial services, focus on short-term contracts and hidden fragility, related to weak regulatory frameworks, undue government interference and governance deficiencies. Our policy analysis therefore focuses on (i) expanding outreach, (ii) fostering long-term finance and (iii) improving regulation and supervision. We identify the positive role of innovation and competition, a stronger focus on non-traditional financial service providers, and more emphasis on demand-side constraints as priority areas for policy actions. Specifically, competition from new players outside the banking system, including telecomm companies can increase outreach with technological innovation that changes the economics of retail finance. Moving beyond national stock exchanges that are not sustainable in most African countries towards regional solutions and over-the-counter trades can help foster long-term finance, as can addressing governance challenges in contractual savings institutions, including life insurance companies and pension funds. Finally, there is a need to

look beyond supply-side constraints towards users of financial services, focusing more on financial literacy of households and firms, but also consumer protection. In formulating policy messages, we carefully distinguish between different country groupings, differentiating -- among others -- between low- and middle-income and small and larger economies, with a special focus on resource-based economies and post-conflict countries. This book reaches out to both policy makers concerned about a more inclusive and effective financial system and other stakeholders, including practitioners and development partners. With this book we aim to contribute to the on-going financial sector debate on Africa, with the ultimate goal of faster economic development and poverty reduction.

Review of Maritime Transport 2012 ,2013-02-25 More than 80 per cent of international trade in goods is carried by sea, and an even higher percentage of developing-country trade is carried in ships. This annual publication is an important source of information on this vital sector. It

closely monitors developments affecting world seaborne trade, freight rates, ports, surface transport, and logistics services, as well as trends in ship ownership and control and fleet age, tonnage supply, and productivity. The Review contains a chapter on legal and regulatory developments and each year includes a chapter highlighting a different region.

Soft Computing Applications Valentina Emilia Balas,Lakhmi C. Jain,Marius Mircea Balas,Shahnaz N. Shahbazova,2020-08-17 This book presents the proceedings of the 8th International Workshop on Soft Computing Applications, SOFA 2018, held on 13–15 September 2018 in Arad, Romania. The book is directed to professors, researchers, and graduate students in area of soft computing techniques and applications.

Secondary Analysis of Electronic Health Records MIT Critical Data,2016-09-09 This book trains the

next generation of scientists representing different disciplines to leverage the data generated during routine patient care. It formulates a more complete lexicon of evidence-based recommendations and support shared, ethical decision making by doctors with their patients. Diagnostic and therapeutic technologies continue to evolve rapidly, and both individual practitioners and clinical teams face increasingly complex ethical decisions. Unfortunately, the current state of medical knowledge does not provide the guidance to make the majority of clinical decisions on the basis of evidence. The present research infrastructure is inefficient and frequently produces unreliable results that cannot be replicated. Even randomized controlled trials (RCTs), the traditional gold standards of the research reliability hierarchy, are not without limitations. They can be costly, labor intensive, and slow, and can return results that are seldom generalizable to every patient population. Furthermore, many pertinent but unresolved clinical and medical systems issues do not seem to have attracted the interest of the research enterprise, which has come to focus instead on cellular and molecular investigations and single-agent (e.g., a drug or device) effects. For clinicians, the end result is a bit of a “data desert” when it comes to making decisions. The new research infrastructure proposed in this book will help the medical profession to make ethically sound and well informed decisions for their patients.

War Photographs Taken on the Battlefields of the

Civil War Mathew B. Brady,Alexander Gardner,2013-06-01 Fought over the course of four years, the Civil War pitted countrymen against countrymen, North versus South, friend against friend, and brother against brother. The photographs within these pages document the war that united America as one. These rare shots were taken in the middle of the battlefield during the earliest days of photography. Selected from a collection of seven thousand original negatives, these historic photos capture nearly every aspect of Civil War life. Among these photos are images of camps sprawling across acres, soldiers at their battlements, firing of heavy artillery, the aftermath of battle, and the terror that these young men faced. See first-hand of Union and Confederate officers strategizing their next moves, and Abraham Lincoln addressing his Union commanders. Originally released from the private collection of Edward Bailey Eaton in 1907, this edition is a must have for any Civil War buff or historian. No collection can be considered complete without these photographs by Matthew Brady and Alexander Gardner, as well as the meticulous passages that put the images in illuminating context.
