**Decision-making and Radioactive Waste Disposal** Andrew Newman,Gerry Nagtzaam,2015-11-19 The International Atomic Energy Agency estimates that nuclear power generation facilities produce about 200,000 cubic meters of low and intermediate-level waste each year. Vital medical procedures, industrial processes and basic science research also produce significant quantities of waste. All of this waste must be shielded from the population for extended periods of time. Finding suitable locations for disposal facilities is beset by two main problems: community responses to siting proposals are generally antagonistic and, as a result, governments have tended to be reactive in their policy-making. Decision-making and Radioactive Waste Disposal explores these issues utilizing a linear narrative case study approach that critically examines key stakeholder interactions in order to explain how siting decisions for low level waste disposal are made. Five countries are featured: the US, Australia, Spain, South Korea and Switzerland. This book seeks to establish an understanding of the political, economic, environmental, legal and social dimensions of siting across those countries. This valuable resource fills a gap in the literature and provides recommendations for future disposal facility siting efforts. The book will be of interest to students and scholars of environmental law, justice, management, politics, energy and security policy as well as decision-makers in government and industry.

*The Economics of Waste* Richard C. Porter,2010-09-30 In this concise, engaging, and provocative work, Richard Porter introduces readers to the economic tools that can be applied to problems involved in handling a diverse range of waste products from business and households. Emphasizing the impossibility of achieving a zero-risk environment, Porter focuses on the choices that apply in real world decisions about waste. Acknowledging that effective waste policy integrates knowledge from several disciplines, Porter focuses on the use of economic analysis to reveal the costs of different policies and therefore how much can be done to meet goals to protect human health and the environment. With abundant examples, he considers subjects such as landfills, incineration, and illegal disposal. He discusses the international trade in waste, the costs and benefits of recycling, and special topics such as hazardous materials, Superfund, and nuclear waste. While making clear his belief that not every form of waste presents the same amount of risk, Porter stresses the need for open-minded approaches to developing new policies. For students, policymakers, and general readers, he provides insight and accessibility to a subject that others might leave out-of-sight, out-of-mind, or buried under an impenetrable prose of statistics and jargon.

**Tropic of Cancer (Harper Perennial Modern Classics)** Henry Miller,2012-01-30 Miller's groundbreaking first novel, banned in Britain for almost thirty years.

Global Warming and the Political Ecology of Health Hans Baer,Merrill Singer,2016-09-17 In this groundbreaking, global analysis of the relationship between climate change and human health, Hans Baer and Merrill Singer inventory and critically analyze the diversity of significant and sometimes devastating health implications of global warming. Using a range of theoretical tools from anthropology, medicine, and environmental sciences, they present ecosyndemics as a new paradigm for understanding the relationship between environmental change and disease. They also go beyond the traditional concept of disease to examine changes in subsistence and settlement patterns, land-use, and lifeways, throwing the sociopolitical and economic dimensions of climate change into stark relief. Revealing the systemic structures of inequality underlying global warming, they also issue a call to action, arguing that fundamental changes in the world system are essential to the mitigation of an array of emerging health crises link to anthropogenic climate and environmental change.

Peripheral Component Interconnect Express (PCIe) single root I/O virtualization (SR-IOV) is a virtualization technology on IBM Power Systems servers. SR-IOV allows multiple logical partitions (LPARs) to share a PCIe adapter with little or no run time involvement of a hypervisor or other virtualization intermediary. SR-IOV does not replace the existing virtualization capabilities that are offered as part of the IBM PowerVM® offerings. Rather, SR-IOV compliments them with additional capabilities. This paper describes many aspects of the SR-IOV technology, including: A comparison of SR-IOV with standard virtualization technology Overall benefits of SR-IOV Architectural overview of SR-IOV Planning requirements SR-IOV deployment models that use standard I/O virtualization Configuring the adapter for dedicated or shared modes Tips for maintaining and troubleshooting your system Scenarios for configuring your system This paper is directed to clients, IBM Business Partners, and system administrators who are involved with planning, deploying, configuring, and maintaining key virtualization technologies.

Downey, this book's computational approach helps you get a solid start. Offering multidisciplinary insights from leading figures, this handbook highlights Indigenous challenges, approaches and solutions to pressing issues in Arctic regions, such as a warming climate and the loss of biodiversity. The book is structured into three distinct parts that cover key topics in recent and future research with Indigenous Peoples in the Arctic. The first part examines the diversity of Indigenous peoples and their cultural expressions in the different Arctic states. It also focuses on the well-being of Indigenous peoples in the Arctic regions. The second part relates to the identities and livelihoods that Indigenous peoples in Arctic regions derive from the resources in their environments. This interconnection between resources and people's identities underscores their entitlements to use their lands and resources. The third and final part provides insights into the political involvement of Indigenous peoples from local all the way to the international level and their right to self-determination and some of the recent related topics in this field. This book offers a novel contribution to Arctic studies, empowering Indigenous research for the future and rebuilding the image of Indigenous peoples as proactive participants, signaling their pivotal role in the co-production of knowledge.
