Sharing Clinical Trial Data Institute of Medicine,Board on Health Sciences Policy,Committee on Strategies for Responsible Sharing of Clinical Trial Data,2015-04-20 Data sharing can accelerate new discoveries by avoiding duplicative trials, stimulating new ideas for research, and enabling the maximal scientific knowledge and benefits to be gained from the efforts of clinical trial participants and investigators. At the same time, sharing clinical trial data presents risks, burdens, and challenges. These include the need to protect the privacy and honor the consent of clinical trial participants; safeguard the legitimate economic interests of sponsors; and guard against invalid secondary analyses, which could undermine trust in clinical trials or otherwise harm public health. Sharing Clinical Trial Data presents activities and strategies for the responsible sharing of clinical trial data. With the goal of increasing scientific knowledge to lead to better therapies for patients, this book identifies guiding principles and makes recommendations to maximize the benefits and minimize risks. This report offers guidance on the types of clinical trial data available at different points in the process, the points in the process at which each type of data should be shared, methods for sharing data, what groups should have access

to data, and future knowledge and infrastructure needs. Responsible sharing of clinical trial data will allow other investigators to replicate published findings and carry out additional analyses, strengthen the evidence base for regulatory and clinical decisions, and increase the scientific knowledge gained from investments by the funders of clinical trials. The recommendations of Sharing Clinical Trial Data will be useful both now and well into the future as improved sharing of data leads to a stronger evidence base for treatment. This book will be of interest to stakeholders across the spectrum of research--from funders, to researchers, to journals, to physicians, and ultimately, to patients.

Transportation Decision Making Kumares C.

Sinha,Samuel Labi,2011-09-09 This pioneering text provides a holistic approach to decisionmaking in transportation project development and programming, whichcan help transportation professionals to optimize their investmentchoices. The authors present a proven set of

methodologies for evaluating transportation projects that ensures that all costs and impacts are taken into consideration. The text's logical organization gets readers started with a solid foundation in basic principles and then progressively builds on that foundation. Topics covered include: Developing performance measures for evaluation, estimating travel demand, and costing transportation projects. Performing an economic efficiency evaluation that accounts for such factors as travel time, safety, and vehicle operating costs. Evaluating a project's impact on economic development and land use as well as its impact on society and culture. Assessing a project's environmental impact, including air quality, noise, ecology, water resources, and aesthetics. Evaluating alternative projects on the basis of multiple performance criteria. Programming transportation investments so that resources can be optimally allocated to meet facility-specific and system-wide goals. Each chapter begins with basic definitions and concepts followed by a methodology for impact assessment. Relevant legislation is discussed and available software for performing evaluations is presented. At the end of each chapter, readers are provided resources for detailed investigation of particular topics. These include Internet sites and publications of international and domestic agencies and research institutions. The authors also provide a companion Web site that offers updates, data for analysis, and case histories of project evaluation and decision making. Given that billions of dollars are spent each year on transportation systems in the United States alone, and that there is a need for thorough and rational evaluation and decision making for cost-effective system preservation and improvement, this text should be on the desks of all transportation planners, engineers, and educators. With exercises in every chapter, this text is an ideal coursebook for the subject of

transportation systems analysis and evaluation.

Teaching a Child with Special Needs at Home and at School Judith B. Munday M.A. M.Ed., 2016-04-28 Have you been searching for help as you try to teach a struggling learner? This is the book you have been looking for! Judi Munday draws from what she has learned in 30 years of teaching exceptional students and shares that practical knowledge with you in Teaching a Child with Special Needs at Home and at School: Strategies and Tools that Really Work! This is a highly readable and helpful guide for anyone who teaches a child with learning disabilities or high-functioning autism or Asperger's. Judi has packed it full of easy-to-use instructional strategies and advice about what works - for both parents who homeschool and for teachers who work with students with special needs. Since it is always difficult to find enough time to individualize, Judi makes sure that her teaching recommendations require little extra work or advance planning. She shows you how easy it is to modify or adapt textbooks and instructional materials. You will also learn about evidence-based instructional tools - such as graphic organizers and rubrics. Chapter topics include high-functioning autism/Asperger's and specific learning disabilities, along with a generous supply of specific teaching strategies that apply to them.

You can also learn more about effective instruction, assistive technology, and student education plans. Judi has the heart to share her wisdom to educate, encourage, and equip you to be a more effective teacher of your special learner.

Reducing Environmental Cancer Risk Suzanne H. Reuben, 2010-10 Though overall cancer incidence and mortality have continued to decline in recent years, cancer continues to devastate the lives of far too many Americans. In 2009 alone, 1.5 million American men, women, and children were diagnosed with cancer, and 562,000 died from the disease. There is a growing body of evidence linking environmental exposures to cancer. The Presidential Cancer Panel dedicated its 2008-2009 activities to examining the impact of environmental factors on cancer risk. The Panel considered industrial, occupational, and agricultural exposures as well as exposures related to medical practice, military activities, modern lifestyles, and natural sources. This report presents the Panel's recommendations to mitigate or eliminate these barriers. Illus.

Think Bayes Allen B. Downey, 2021-05-18 If you know how to program, you're ready to tackle Bayesian statistics. With this book, you'll learn how to solve statistical problems with Python code instead of mathematical formulas, using discrete probability distributions rather than continuous mathematics. Once you get the math out of the way, the Bayesian fundamentals will become clearer and you'll begin

to apply these techniques to real-world problems. Bayesian statistical methods are becoming more common and more important, but there aren't many resources available to help beginners. Based on undergraduate classes taught by author Allen B. Downey, this book's computational approach helps you get a solid start. Use your programming skills to learn and understand Bayesian statistics Work with problems involving estimation, prediction, decision analysis, evidence, and Bayesian hypothesis testing Get started with simple examples, using coins, dice, and a bowl of cookies Learn computational methods for solving real-world problems

Fostering Integrity in Research National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Committee on Science, Engineering, Medicine, and Public Policy, Committee on Responsible Science, 2018-01-13 The integrity of knowledge that emerges from research is based on individual and collective adherence to core values of objectivity, honesty, openness, fairness, accountability, and stewardship. Integrity in science means that the organizations in which research is conducted encourage those involved to exemplify these values in every step of the research process. Understanding the dynamics that support or distort practices that uphold the integrity of research by all participants ensures that the research enterprise advances knowledge. The 1992 report *Responsible Science: Ensuring the Integrity of the Research Process* evaluated issues related to scientific responsibility and the conduct of research. It provided a valuable service in describing and analyzing a very complicated set of issues, and has served as a crucial basis for thinking about research integrity for more than two decades. However, as experience has accumulated with various forms of research misconduct, detrimental research practices, and other

forms of misconduct, as subsequent empirical research has revealed more about the nature of scientific misconduct, and because technological and social changes have altered the environment in which science is conducted, it is clear that the framework established more than two decades ago needs to be updated. Responsible Science served as a valuable benchmark to set the context for this most recent analysis and to help guide the committee's thought process. *Fostering Integrity in Research* identifies best practices in research and recommends practical options for discouraging and addressing research misconduct and detrimental research practices.

In the Beginning Michael Lienesch, 2007-04-23 The current controversy over teaching evolution in the public schools has grabbed front-page headlines and topped news broadcasts all across the United States. *In the Beginning* investigates the movement that has ignited debate in state legislatures and at school board meetings. Reaching back to the origins of antievolutionism in the 1920s, and continuing to the promotion of intelligent design today, Michael Lienesch skillfully analyzes one of the most formidable political movements of the twentieth century. Applying extensive original sources and social movement theory, Lienesch begins with fundamentalism, describing how early twentieth-century fundamentalists worked to form a collective identity, to develop their own institutions, and to turn evolution from an idea into an issue. He traces the emerging antievolution movement through the 1920s, examining debates over Darwinism that took place on college campuses and in state legislatures throughout the country. With fresh insights and analysis, Lienesch retells the story of the 1925 Scopes monkey trial and reinterprets its meaning. In tracking the movement from that time to today, he explores the rise of creation science in the 1960s,

the alliance with the New Christian Right in the 1980s, and the development of the theory of intelligent design in our own time. He concludes by speculating on its place in the politics of the twenty-first century. In the Beginning is essential for understanding the past, present, and future debates over the teaching of evolution.

Information Resources in Toxicology P.J. Bert Hakkinen, Asish Mohapatra, Steven G. G. Gilbert, 2009-08-19 This latest version of Information Resources in Toxicology (IRT) continues a tradition established in 1982 with the publication of the first edition in presenting an extensive itemization, review, and commentary on the information infrastructure of the field. This book is a unique wide-ranging, international, annotated bibliography and compendium of major resources in toxicology and allied fields such as environmental and occupational health, chemical safety, and risk assessment. Thoroughly updated, the current edition analyzes technological changes and is rife with online tools and links to Web sites. IRT-IV is highly structured, providing easy access to its information. Among the “hot topics covered are Disaster Preparedness and Management, Nanotechnology, Omics, the Precautionary Principle, Risk Assessment, and Biological, Chemical and Radioactive Terrorism and Warfare are among the designated. • International in scope, with contributions from over 30 countries • Numerous key references and relevant Web links • Concise narratives about toxicologic sub-disciplines • Valuable appendices such as the IUPAC Glossary of Terms in Toxicology • Authored by experts in their respective sub-disciplines within toxicology

Stem Cell Research Toni Marzotto, Patricia M. Alt, 2017-04-11 Stem Cell Research takes a multi-disciplinary approach to the topic of human embryonic stem cell research, starting with the breakthrough discovery up

through the present day controversy. The book invites the reader to join the conversation by providing a well balanced approach to many of the issues surrounding the development of this controversial scientific field. It includes the thoughts and experiences of scientists, journalists and ethicists as it tried to approach the topic through a variety of different academic disciplines. The book will help the non-scientist understand the biology, research regulations and funding; and simultaneously it will help the scientist better comprehend the full spectrum of ethical, religious, and policy debates.

Analysis of Cancer Risks in Populations Near Nuclear Facilities National Research Council,Division on Earth and Life Studies,Nuclear and Radiation Studies Board,Committee on the Analysis of Cancer Risks in Populations near Nuclear Facilities—"Phase I,2012-06-29 In the late 1980s, the National Cancer Institute initiated an investigation of cancer risks in populations near 52 commercial nuclear power plants and 10 Department of Energy nuclear facilities (including research and nuclear weapons production facilities and one reprocessing plant) in the United States. The results of the NCI investigation were used a primary resource for communicating with the public about the cancer risks near the nuclear facilities. However, this study is now over 20 years old. The U.S. Nuclear Regulatory Commission requested that the National Academy of Sciences provide an updated assessment of cancer risks in populations near USNRC-licensed nuclear facilities that utilize or process uranium for the production of electricity. Analysis of Cancer Risks in Populations near Nuclear Facilities: Phase 1 focuses on identifying scientifically sound approaches for carrying out an assessment of cancer risks associated with living near a

nuclear facility, judgments about the strengths and weaknesses of various statistical power, ability to assess potential confounding factors, possible biases, and required effort. The results from this Phase 1 study will be used to inform the design of cancer risk assessment, which will be carried out in Phase 2. This report is beneficial for the general public, communities near nuclear facilities, stakeholders, healthcare providers, policy makers, state and local officials, community leaders, and the media.
