Ocean Noise and Marine Mammals National Research Council, Division on Earth and Life Studies, Ocean Studies Board, Committee on Potential Impacts of Ambient Noise in the Ocean on Marine Mammals, 2003-05-22 For the 119 species of marine mammals, as well as for some other aquatic animals, sound is the primary means of learning about the environment and of communicating, navigating, and foraging. The possibility that human-generated noise could harm marine mammals or significantly interfere with their normal activities is an issue of increasing concern. Noise and its potential impacts have been regulated since the passage of the Marine Mammal Protection Act of 1972. Public awareness of the issue escalated in 1990s when researchers began using high-intensity sound to measure ocean climate changes. More recently, the stranding of beaked whales in proximity to Navy sonar use has again put the issue in the spotlight. *Ocean Noise and Marine Mammals* reviews sources of noise in the ocean environment, what is known of the responses of marine mammals to acoustic disturbance, and what models exist for describing ocean noise and marine mammal responses. Recommendations are made for future data gathering efforts, studies of marine mammal behavior and physiology, and modeling efforts necessary to determine what the long- and short-term impacts of ocean noise on marine mammals.

Human-Computer Interaction - INTERACT 2009 Tom Gross, Jan Gulliksen, Paula Kotzé, Lars Oestreicher, Philippe Palanque, Raquel Oliveira Prates, Marco Winckler, 2009-08-06 INTERACT 2009 was the 12th of a series of INTERACT international conferences supported by the IFIP Technical Committee 13 on Human-Computer Interaction. This year, INTERACT was held in Uppsala (Sweden), organized by the Swedish Interdisciplinary Interest Group for Human-Computer Interaction (STIMDI) in cooperation with the Department of Information Technology at Uppsala University. Like its predecessors, INTERACT 2009 highlighted, both to the academic and to the industrial world, the importance of the human-computer interaction (HCI) area and its most recent breakthroughs on current applications. Both experienced HCI researchers and professionals, as well as newcomers to the HCI field, interested in designing or evaluating interactive software, developing new interaction technologies, or investigating overarching theories of HCI, found in INTERACT 2009 a great forum for communication with people of similar interests, to encourage collaboration and to learn. INTERACT 2009 had Research and Practice as its special theme. The reason we selected this theme is that the research within the field has drifted away from the practical applicability of its results and that the HCI practice has come to disregard the knowledge and development within the academic community.

Auditory Display Sølvi Ystad, Mitsuko Aramaki, Richard Kronland-Martinet, Kristoffer Jensen, 2010-04-20 This book constitutes the thoroughly refereed post-conference proceedings of the 6th International Symposium on Computer Music Modeling and Retrieval, CMMR 2009, held in Copenhagen, Denmark, in May 2009. The 25 revised full papers presented were specially reviewed and corrected for this proceedings volume. The conference's topics include auditory exploration of data via sonification and audification; real time monitoring of multivariate data; sound in immersive interfaces and teleoperation; perceptual issues in auditory display; sound in generalized computer interfaces; technologies supporting auditory display

creation; data handling for auditory display systems; applications of auditory display.

Ergonomics for Children Rani Lueder, Valerie J. Berg Rice, 2007-07-25 Providing guidance on a broad range of issues for young children and adolescents, *Ergonomics for Children: Designing Products and Places for Toddlers to Teens* give you a deep understanding of how children develop and how these developmental changes can influence the design of products and places for children. Copiously illustrated with photos and other images, the book helps you quickly find answers to your questions, grasp concepts, and apply them. Its subsections are organized to help you locate and understand the content you need. Edited by experts with contributions from an international panel, the book is both broad in coverage and international in perspective. The contributors review the ways in which children develop physically, perceptually, cognitively, and socially and then use this information to provide practical guidelines for the design of places and products for children.

Why You Hear what You Hear Eric J. Heller, 2013 This title makes possible a deep intuitive understanding of many aspects of sound, as opposed to the usual approach of mere description. This goal is aided by hundreds of original illustrations and examples, many of which the reader can reproduce and adjust using the same tools used by the author.

Inside Steve's Brain Leander Kahney, 2009-09-03 One of USA Today's Best Business Books of 2008--now updated with a new chapter It's hard to believe that one man revolutionized computers in the 1970s and '80s (with the Apple II and the Mac), animated movies in the 1990s (with Pixar), and digital music in the 2000s (with the iPod and iTunes). No wonder some people worship Steve Jobs like a god. On the other hand, stories of his epic tantrums and general bad behavior are legendary. *Inside Steve's Brain* cuts through the cult of personality that surrounds Jobs to unearth the secrets to his unbelievable results. So what's really inside Steve's brain? According to Leander Kahney, who has covered Jobs since the early 1990s, it's a fascinating bundle of contradictions. This expanded edition includes a new chapter on Jobs's very public health crisis and the debate about Apple's future.

Wireless Sensor Networks Kazem Sohraby, Daniel Minoli, Taieb Znati, 2007-04-06 *Infrastructure for Homeland Security Environments Wireless Sensor Networks* helps readers discover the emerging field of low-cost standards-based sensors that promise a high order of spatial and temporal resolution and accuracy in an ever-increasing universe of applications. It shares the latest advances in science and engineering paving the way towards a large plethora of new applications in such areas as infrastructure protection and security, healthcare, energy, food safety, RFID, ZigBee, and processing. Unlike other books on wireless sensor networks that focus on limited topics in the field, this book is a broad introduction that covers all the major technology, standards, and application topics. It contains everything readers need to know to enter this burgeoning field, including current applications and promising research and development; communication and networking protocols; middleware architecture for wireless sensor networks; and security and management. The straightforward and engaging writing style of this book makes even complex concepts and processes easy to follow and understand. In addition, it offers several features that help readers grasp the material and then apply their knowledge in designing their own wireless sensor network systems: * Examples illustrate how concepts are applied to the development and application of * wireless sensor

networks * Detailed case studies set forth all the steps of design and implementation needed to solve real-world problems * Chapter conclusions that serve as an excellent review by stressing the chapter's key concepts * References in each chapter guide readers to in-depth discussions of individual topics This book is ideal for networking designers and engineers who want to fully exploit this new technology and for government employees who are concerned about homeland security. With its examples, it is appropriate for use as a coursebook for upper-level undergraduates and graduate students.

New Science of Learning Myint Swe Khine,Issa M. Saleh,2010-06-16 The earliest educational software simply transferred print material from the page to the monitor. Since then, the Internet and other digital media have brought students an ever-expanding, low-cost knowledge base and the opportunity to interact with minds around the globe—while running the risk of shortening their attention spans, isolating them from interpersonal contact, and subjecting them to information overload. The *New Science of Learning: Cognition, Computers and Collaboration in Education* deftly explores the multiple relationships found among these critical elements in students' increasingly complex and multi-paced educational experience. Starting with instructors' insights into the cognitive effects of digital media—a diverse range of viewpoints with little consensus—this cutting-edge resource acknowledges the double-edged potential inherent in computer-based education and its role in shaping students' thinking capabilities. Accordingly, the emphasis is on strategies that maximize the strengths and compensate for the negative aspects of digital learning, including: Group cognition as a foundation for learning Metacognitive control of learning and remembering Higher education course development using open education resources Designing a technology-oriented teacher professional development model Supporting student collaboration with digital video tools Teaching and learning through social annotation practices The *New Science of Learning: Cognition, Computers and Collaboration in Education* brings emerging challenges and innovative ideas into sharp focus for researchers in educational psychology, instructional design, education technologies, and the learning sciences.

Surveillance Valley Yasha Levine,2018-02-06 The internet is the most effective weapon the government has ever built. In this fascinating book, investigative reporter Yasha Levine uncovers the secret origins of the internet, tracing it back to a Pentagon counterinsurgency surveillance project. A visionary intelligence officer, William Godel, realized that the key to winning the war in Vietnam was not outgunning the enemy, but using new information technology to understand their motives and anticipate their movements. This idea -- using computers to spy on people and groups perceived as a threat, both at home and abroad -- drove ARPA to develop the internet in the 1960s, and continues to be at the heart of the modern internet we all know and use today. As Levine shows, surveillance wasn't something that suddenly appeared on the internet; it was woven into the fabric of the technology. But this isn't just a story about the NSA or other domestic programs run by the government. As the book spins forward in time, Levine examines the private surveillance business that powers tech-industry giants like Google, Facebook, and Amazon, revealing how these companies spy on their users for profit, all while doing double duty as military and intelligence contractors. Levine shows that the military and Silicon Valley are effectively inseparable: a military-digital complex that permeates everything connected to the internet, even coopting and weaponizing the antigovernment privacy movement that sprang up in the wake of Edward Snowden. With deep research, skilled storytelling, and provocative arguments, *Surveillance Valley* will change the way you think about the news -- and the device on which you read it.

Telematics and Computing Miguel Felix Mata-Rivera,Roberto Zagal-Flores,Cristian Barría-Huidobro,2019-10-24 This book constitutes the thoroughly

refereed proceedings of the 8th International Congress on Telematics and Computing, WITCOM 2019, held in Merida, Mexico, in November 2019. Design Recommendations for Intelligent Tutoring Systems Robert Sottolare, Arthur Graesser, Xiangen Hu, Keith Brawner, 2015-07-05 Design Recommendations for Intelligent Tutoring Systems (ITSs) explores the impact of intelligent tutoring system design on education and training. Specifically, this volume examines "Authoring Tools and Expert Modeling Techniques". The "Design Recommendations book series examines tools and methods to reduce the time and skill required to develop Intelligent Tutoring Systems with the goal of improving the Generalized Intelligent Framework for Tutoring (GIFT). GIFT is a modular, service-oriented architecture developed to capture simplified authoring techniques, promote reuse and standardization of ITSs along with automated instructional techniques and effectiveness evaluation capabilities for adaptive tutoring tools and methods.

Children and Justice Katalin Balogh, Heidi Salaets, 2015 Interpreter-mediated child interviews, by their nature, involve communication with vulnerable interviewees who need extra support for three main reasons: their age (under 18), their native language, and their procedural status (as vulnerable victims, witnesses, or suspects). The CO-Minor-IN/QUEST research project (JUST/2011/JPEN/AG/2961; January 2013-December 2014) studied the interactional dynamics of interpreter-mediated child interviews during the pre-trial phase of criminal proceedings. The project provides guidance in implementing the 2012/29/EU Directive establishing minimum standards on the rights, support, and protection of victims of crime. This book sets out the key findings from a survey conducted in the project partners' countries (Belgium, France, Hungary, Italy, the Netherlands, and the UK), targeting the different professional groups involved in child interviewing. Both the quantitative and qualitative analyses of the respondents' answers are discussed in detail. The book also provides hands-on chapters, addressing concrete cases of children involved in criminal procedures who required the assistance of an interpreter to ensure their rights were fully protected. Finally, a set of recommendations is offered to professionals working in this legal area. Subject: Criminal Law, Children's Law, Mediation]

History of Computer Art Thomas Dreher, 2020 The development of the use of computers and software in art from the Fifties to the present is explained. As general aspects of the history of computer art an interface model and three dominant modes to use computational processes (generative, modular, hypertextual) are presented. The History of Computer Art features examples of early developments in media like cybernetic sculptures, computer graphics and animation (including music videos and demos), video and computer games, reactive installations, virtual reality, evolutionary art and net art. The functions of relevant art works are explained more detailed than usual in such histories.
