Suzanne Hughes, Andy Mardell

Design for Resilience Stuart Walker, 2023-08-01 A beautifully written and illustrated framework for resilient design that is as pragmatic as it is inspiring, showing us not only how but why we should design differently. Design for Resilience is a timely, visionary map for creating restorative design that addresses humanity's most critical issue: climate change. Our current wealth-oriented economic systems have resulted in gross disparities, war, refugee crises, and mass migrations that augur a bleak collective future. In this book, respected scholar Stuart Walker combines formidable research with practical examples to offer a hopeful, original, and transformative view of what resilient design looks like and how it can apply to all aspects of life, from personal objects to food to culture to business to recreation. Working at the intersection of theory, philosophy, history, environmentalism, and justice, Walker offers a fresh approach that decolonizes design thinking to fundamentally change the nature of design practice and how it shapes our lives, communities, and industries. Asking nothing short of the fundamental question "How should we live?," Design for Resilience addresses the high-

priority issues that concern governments, policymakers, designers, and people around the world who recognize that now, perhaps more than at any other time in human history, we need paradigmatic changes to create a future that lasts.

Global Perspectives on the Psychology of Terrorism Chitadze, Nika, 2022-09-16 The constant threat of terror leads to the destabilization of the political, economic, and social situation in the state. Lack of confidence in personal safety contributes to the growth of anxiety, fears, and mental stress, which negatively affects psychological health, leading to the development of various psychosomatic disorders among the population. **Global Perspectives on the Psychology of Terrorism** discusses the psychological aspects of terrorism, including the determination of the main types of terrorism and the psychological characteristics of terrorists and terrorist groups. It further speaks on the negative impact of terrorism on the mass consciousness, as well as the ways to deal with stress in people exposed to the impact of terrorist attacks, features of human behavior in extreme situations, and methods of psychological support in times of crisis. Covering topics such as state terrorism, international security,

and cyberterrorism, this premier reference source is an excellent resource for government officials, sociologists, representatives of mass media, non-governmental organizations, politicians, psychologists, students and faculty of higher education, librarians, researchers, and academicians.

Human Rights and the Environment in Africa Jean-Claude N. Ashukem, Semie M.

Sama, 2023-11-10 The relationship between human rights and the environment, as evidenced by the recent UN Resolution on the human right to a healthy environment, is a topical, fascinating, uneasy, and increasingly urgent one. This timely collection explores the inextricable relationship between human rights and the environment as a critical lens for understanding and addressing key human rights and environmental issues confronting Africa. The work explores theoretical, philosophical, doctrinal, and empirical research to interrogate and provide clarity on how and whether the human rights-based approach to environmental protection and policy implications has been effective in enhancing environmental protection and sustainability in Africa. It brings together an elite group of African and international experts to investigate the increasing connectivity and problems with African

human rights, environmental governance, and the quest for sustainability. The book is divided into thematic clusters, including: the right of vulnerable communities to sustainability; climate change, the right to development and natural resource governance; corporate environmental responsibility and sustainability; the philosophy of environmental ethics and theories of human rights approaches to environmental governance; procedural environmental rights; the role of the judiciary in environmental protection; and desertification. These themes provide a structure to investigate and clarify specific fundamental questions on Africa's environmental governance paradigm. This innovative contribution provides an interdisciplinary approach to the philosophical interrelationship and use of human rights approaches to ensure and enhance environmental protection and sustainability. As such, the book will be of interest to African scholars, researchers and students in Human Rights Law, Environmental Studies, Political Science, Ecology and Conservation and Development Studies. It will also be a valuable resource for policymakers, governments, NGOs, practitioners, and all those interested in African environmental governance.

The Dispute Over Gibraltar Melissa R. Jordine,2009 Details the history behind the countries that have laid claim to and currently control the Gibraltar peninsula that acts as a gateway between the Mediterranean Sea and the Atlantic Ocean.

Between Consenting Peoples Jeremy Webber,Colin M. Macleod,2010-10-28 Consent has long been used to establish the legitimacy of society. But when one asks – who consented? how? to what type of community? – consent becomes very elusive, more myth than reality. In *Between Consenting Peoples*, leading scholars in legal and political theory examine the different ways in which consent has been used to justify political communities and the authority of law, especially in indigenous-nonindigenous relations. They explore the kind of consent – the kind of attachment – that might ground political community and establish a fair relationship between indigenous and nonindigenous peoples.

Ms. Understood Jen Hatmaker,2015-08-07 Throughout time, women have been identified in many conflicting ways. Sometimes goddesses, slaves, or seductresses, but always misunderstood—by themselves and others. Jen Hatmaker uses examples from the five women named in Jesus' lineage to

help identify who a daughter of Christ is. From the woman who acted like a prostitute to the woman who was one, the widow to the adulteress to the mother, each has something to pass on.

The Degradation of the International Legal Order? Bill Bowring, 2008-02-19 Providing the basis for critical engagement with the pessimism of the contemporary age, *The Degradation of the International Legal Order?* argues passionately for a rehabilitation of the honour of historic events and processes, and of their role in generating legal concepts. Drawing primarily from the Marxian tradition, but also engaging with a range of contemporary work in critical theory and critical legal and human rights scholarship, this book analyses historical and recent international events and processes in order to challenge their orthodox interpretation. What is thus proposed is a new evaluation of international legal principles and human rights norms, the revolutionary content of which, it is argued, turns them from mere rhetoric into powerful weapons of struggle. Accessibly written, but theoretically sophisticated, this original and timely book is intended for critical teachers and students of international law, human rights, and international relations, as well as legal and political activists.

African Studies in Geography from Below Ben Arrous, Lazare Ki-Zerbo, 2009-11-01

The doctrine of international relations (inter-state, indeed), territorial ideologies, the logic of autochthony and its ramifications, ethnic cleansing, are all hinged at different levels upon the same pseudo-fact: to every society a closed and exclusive territory demarcated by fixed and linear borders. This way of thinking,

totally foreign to African societies for a long time, has generated today more contradictions than it can ever solve. The authors of this book make a clear distinction between territory formation from the top as being a deliberate political project, and its formation from below as being a more diffused historical process which is determined by the scheme of antagonisms and compromises between social forces. In lieu of a stark opposition between the top and below, the authors unveil the interdependence and mutual influence which form the basis of a dual system within which legal formation -by the colonial authorities first, then by the postcolonial one- is confronted with a host of subaltern spatial dynamics, neglecting thereby the legitimacy which only them can provide. As an essential read for anyone who is interested in the relationship between knowledge and power, this book offers stimulating perspectives on the issue of African unity and its epistemological and political challenges. It renews profoundly our approaches to human security, citizenship, borders and mobility. Contributions are in English and in French.

From Past to Future: Graßmann's Work in Context Hans-Joachim Petsche, Albert C. Lewis, Jörg Liesen, Steve Russ, 2010-12-16 On the occasion of the 200th anniversary of the birth of Hermann Graßmann (1809-1877), an interdisciplinary conference was held in Potsdam, Germany, and in Graßmann's hometown Szczecin, Poland. The idea of the conference was to present a multi-faceted picture of Graßmann, and to uncover the complexity of the factors that were responsible for his creativity. The conference demonstrated not only the very influential reception of his work at the turn of the 20th century, but also the unexpected modernity of his ideas, and their continuing development in

the 21st century. This book contains 37 papers presented at the conference. They investigate the significance of Graßmann's work for philosophical as well as for scientific and methodological questions, for comparative philology in general and for Indology in particular, for psychology, physiology, religious studies, musicology, didactics, and, last but not least, mathematics. In addition, the book contains numerous illustrations and English translations of original sources, which are published here for the first time. These include life histories of Graßmann (written by his son Justus) and of his brother Robert (written by Robert himself), as well as the paper "On the concept and extent of pure theory of number" by Justus Graßmann (the father).

Fine Books Alfred William Pollard, 1912

Energy, Resource Extraction and Society Anna Szolucha, 2018-09-03 Energy is central to the fabric of society. This book revisits the classic notions of energy impacts by examining the social effects of resource extraction and energy projects which are often overlooked. Energy impacts are often reduced to the narrow configurations of greenhouse gas emissions, chemical spills or land use changes. However, this neglects the fact that the way we produce, distribute and consume energy shapes society, political institutions and culture. The authors trace the impacts of contemporary energy

and resource extraction developments and explain their significance for the shaping of powerful social imaginaries and a reconfiguration of political and democratic systems. They analyse not only the complex histories and landscapes of industrial mining and energy development, including oil, coal, wind power, gas (fracking) and electrification, but also their significance for contested energy and social futures. Based on ethnographic and interdisciplinary research from around the world, including case studies from Australia, Germany, Kenya, the Netherlands, Nicaragua, Norway, Poland, Turkey, UK and USA, they document the effects on local communities and how these are often transformed into citizen engagement, protest and resistance. This sheds new light on the relationship between energy and power, reflecting a wide array of pertinent impacts beyond the usual considerations of economic efficiency and energy security. The volume is aimed at advanced students and researchers in anthropology, sociology, human geography, science and technology studies, environmental studies and sustainable development as well as professionals working in the field of impact assessments.

China and Sustainable Development in Latin America Rebecca Ray, Kevin Gallagher, Andres

López,Cynthia Sanborn,2017-01-02 During Latin America's China-led commodity boom, governments turned a blind eye to the inherent flaws in the region's economic policy. Now that the commodity boom is coming to an end, those flaws cannot be ignored. High on the list of shortcomings is the fact that Latin American governments—and Chinese investors—largely fell short of mitigating the social and environmental impacts of commodity-led growth. The recent commodity boom exacerbated pressure on the region's waterways and forests, accentuating threats to human health, biodiversity, global climate change and local livelihoods. China and Sustainable Development in Latin America documents the social and environmental impact of the China-led commodity boom in the region. It also highlights important areas of innovation, like Chile's solar energy sector, in which governments, communities and investors worked together to harness the commodity boom for the benefit of the people and the planet.
