**Converging Operations in the Study of Visual Selective Attention** Arthur F. Kramer,Michael G. H. Coles,Gordon D. Logan,1996-01 This volume represents the state of the art in research on visual selective attention, with a focus on the broad theme of converging operations. In 19 chapters, prominent scholars in the study of visual attention bring readers up to date on findings made possible over the past 15 years by new research methods and brain-imaging technologies. The first 5 chapters present a review and tutorial on the current issues of relevance to the study of visual selective attention, including specific research techniques and various theories, paradigms, and models. The remaining chapters provide cutting-edge research from multiple perspectives: behavioral studies, computational modeling, human research, and neural-imaging techniques. An examination of how disparate approaches from a variety of disciplines can be combined to provide an integrated view of visual selective attention is also presented. *Converging Operations in the Study of Visual Selective Attention* covers a broad scope of topics - inhibition, top-down and bottom-up control of attention, locus of selection, and representation - in reporting the range of research available from leaders in the field. In documenting these accomplishments, it sets the agenda for future studies.
