Methods in Community-Based Participatory Research for Health Barbara A. Israel, Eugenia Eng, Amy J. Schulz, Edith A. Parker, 2005-08-19 Written by distinguished experts in the field, this book shows how researchers, practitioners, and community partners can work together to establish and maintain equitable partnerships using a Community-Based Participatory Research (CBPR) approach to increase knowledge and improve health and well-being of the communities involved. CBPR is a collaborative approach to research that draws on the full range of research designs, including case study, etiologic, longitudinal, experimental, and nonexperimental designs. **Living in a Material World** Kevin Morrison, 2008-12-08 At a time when the world is grappling with rising food and energy prices and climate change, Living in a Material World provides an insight into some of the contributing factors behind these challenges. The emergence of new consumers in China, India, Russia and the Middle East has added formidable competition to the natural resources that have been taken for granted in the developed world. Everything we consume involves the use of metals, fossil fuels or agriculture. Our high tech 'lifestyles' depend on the secure supply of these raw materials which we take from planet earth and use to make our lives more comfortable, more productive or more manageable. The effect of this increasing global demand for commodities has pushed up prices of materials from oil and copper to corn and wheat; forcing consumers to pay more

for the many 'necessities' of life, from a loaf of bread to electricity bills. Since the commodity boom has unfolded, commodities have gone from the back page of the newspaper to the front; with more and more headlines about record food and oil prices, dire climate change warnings, energy security and China's demand for more raw materials. This era of high oil and food prices is no passing phase: The supply of many key natural resources is stretched to the limit. But what is the real cost? Living in a Material World makes the link between raw materials and the consumer, and shows how they are relevant to everybody, everyday - now more so than at any time since the last oil shock nearly three decades ago. A unique insight into this 'once in a generation' boom, the book shows how the increasing value of commodities is impacting on consumers and investors, in ways we are only just beginning to understand. It was a great pleasure to read this book which provides an essential background to understanding commodities for anybody interested in understanding them more closely. It is so rare to see all the essential elements brought together in one book. -Chris Brodie, Krom River Partners LLP Kevin Morrison set out to write a book about the daily relevance that raw materials have for the ordinary consumer. He has achieved his objective par excellence. The subject matter has been comprehensively researched and well documented - yet the writer has avoided using complicated technical language. The style of the book is more in tune with a novel and the main topics are treated with a special sense of humour. I would readily recommend this work to anyone interested in how global energy issues have a direct affect on us all. -Mehdi Varzi, President, Varzi Energy, London

*Stress and Environmental Regulation of Gene Expression and Adaptation in Bacteria* Frans J. de Bruijn, 2016-07-13 Bacteria in various habitats are subject to continuously changing environmental conditions, such as nutrient deprivation, heat and cold stress, UV radiation, oxidative stress, dessication, acid stress, nitrosative stress, cell envelope stress, heavy metal exposure, osmotic stress, and others. In order to survive, they have to respond to these conditions by adapting their physiology through sometimes drastic changes in gene expression. In addition they may adapt by changing their morphology, forming biofilms, fruiting bodies or spores, filaments, Viable But Not Culturable (VBNC) cells or moving away from stress compounds via chemotaxis. Changes in gene expression constitute the main component of the bacterial response to stress and environmental changes, and involve a myriad of different mechanisms, including (alternative) sigma factors, bi- or tri-component regulatory systems, small non-coding RNA's, chaperones, CHRIS-Cas systems, DNA repair, toxin-antitoxin systems, the stringent response, efflux pumps, alarmones, and modulation of the cell envelope or membranes, to name a few. Many regulatory elements are conserved in different bacteria; however there are endless variations on the theme and novel elements of gene regulation in bacteria inhabiting particular environments are constantly being discovered. Especially in (pathogenic) bacteria colonizing the human body a plethora of bacterial responses to innate stresses such as pH, reactive nitrogen and oxygen species and antibiotic stress are being described. An attempt is made to not only cover model systems but give a broad overview of the stress-responsive regulatory systems in a variety of bacteria, including medically important bacteria, where elucidation of certain aspects of these systems could lead to treatment strategies of the pathogens. Many of the regulatory systems being uncovered are specific, but there is also considerable "cross-talk" between different circuits. *Stress and Environmental Regulation of Gene Expression and Adaptation in Bacteria* is a comprehensive two-volume work bringing together both review and original research articles on key topics in stress and environmental control of gene expression in bacteria. Volume One contains key overview chapters, as well as content on one/two/three component regulatory systems and stress responses, sigma factors and stress responses, small non-coding RNAs and stress responses, toxin-antitoxin systems and stress responses, stringent response to stress, responses to UV irradiation, SOS and double stranded systems repair systems and stress, adaptation to both oxidative and osmotic stress, and desiccation tolerance and drought stress. Volume Two covers heat shock responses, chaperonins and stress, cold shock responses, adaptation to acid stress, nitrosative stress, and envelope stress, as well as iron homeostasis, metal resistance, quorum sensing, chemotaxis and biofilm formation, and viable but not culturable (VBNC) cells. Covering the full breadth of current

stress and environmental control of gene expression studies and expanding it towards future advances in the field, these two volumes are a one-stop reference for (non) medical molecular geneticists interested in gene regulation under stress.
