Authentication and Authorization on the Web Nigel Chapman, 2012-10 A short book in the Web Security Topics series for Web developers, by the well-known authors Nigel and Jenny Chapman. Web applications manipulate resources in response to requests from users. It is often necessary to determine whether a requested operation should be allowed for the user who sent the request. This process of authorization - that is, deciding whether an application should be allowed to carry out the operation which a request from a particular user or program calls for - depends on, but is separate from, the process of authentication. Authentication means determining the identity of the user or program sending the request. This is usually done by maintaining user accounts, protected by passwords, and by requiring users to log in. Written for professional and student Web developers, this book provides a clear and practical description of authentication and authorization for Web sites. Secure methods of storing users' account details are described, with special emphasis on the secure storage of passwords. The authors explain different methods of authentication, and techniques for applying authorization to requests from authenticated users. A simple application, written in JavaScript and built on the Express framework, is developed throughout the book to demonstrate the principles. The source code is provided via the companion site websecuritytopics.info. Topics covered include hashing and salting passwords for secure storage, using CAPTCHAs to prevent the creation of bogus accounts, resetting passwords, session-based authentication and attacks against sessions, HTTP authentication, OpenId, authorization based on user accounts, role-based authorization, and OAuth. Notes on relevant topics in cryptography are also included. Clear key points provide useful summaries at the end of each section, and technical terms are defined in a 16-page glossary.

Multiyear Authorizations for Research and Development. Report by the Comptroller General of the United States, 1981 The current emphasis on cuts in Federal spending and balanced budgets has made R & D programs and activities extremely vulnerable to reductions in funding levels. This situation has forced congressional and executive decisionmakers to make increasingly difficult priority and trade-off decisions between competing programs. The current annual authorization process for R & D has made this task even more difficult because congressional authorizing committees do not have enough time to investigate existing program objectives, new R & D initiatives, and agency R & D plans to deal with future issues. At the same time, these constraints have made it difficult for the executive branch to supply the program and planning information needed in authorization hearings.

Authorization Gerardus Blokdyk, 2018-05-07 Are there any disadvantages to implementing Authorization? There might be some that are less obvious? Is the Authorization organization completing tasks effectively and efficiently? Who is the Authorization process owner? When does authorization for spending occur?
