Quantum Manjit Kumar,2008-10-02 'This is about gob-smacking science at the far end of reason ... Take it nice and easy and savour the experience of your mind being blown without recourse to hallucinogens' Nicholas Lezard, Guardian For most people, quantum theory is a byword for mysterious, impenetrable science. And yet for many years it was equally baffling for scientists themselves. In this magisterial book, Manjit Kumar gives a dramatic and superbly-written history of this fundamental scientific revolution, and the divisive debate at its core. Quantum theory looks at the very building blocks of our world, the particles and processes without which it could not exist. Yet for 60 years most physicists believed that quantum theory denied the very existence of reality itself. In this tour de force of science history, Manjit Kumar shows how the golden age of physics ignited the greatest intellectual debate of the twentieth century. Quantum theory is weird. In 1905, Albert Einstein suggested that light was a particle, not a wave, defying a century of experiments. Werner Heisenberg's uncertainty principle and Erwin Schrodinger's famous dead-and-alive cat are similarly strange. As Niels Bohr said, if you weren't shocked by quantum theory, you didn't really understand it. While Quantum sets the science in the context of the great upheavals of the modern age, Kumar's centrepiece is the conflict between Einstein and Bohr over the nature of reality and the soul of science. 'Bohr brainwashed a whole generation of physicists into believing that the problem had been solved', lamented the Nobel Prize-winning physicist Murray Gell-Mann. But in Quantum, Kumar brings Einstein back to the centre of the quantum debate. Quantum is the essential read for anyone fascinated by this complex and thrilling story and by the band of brilliant men at its heart.

Capital Accumulation and Women's Labor in Asian Economies Peter Custers,2012-05-01 The global impact of Asian production of the wage goods consumed in North America and Europe is only now being recognized, and is far from being understood. Asian women, most only recently urbanized and in the waged work force, are at the center of a process of intensive labor for minimal wages that has upended the entire global economy. First published in 1997, this prescient study is the best available summary of this crucial process as it took hold at the very end of the twentieth century. This new edition brings the discussion up to 2011 with an extensive introduction by world-famous economist Jayati Ghosh of New Delhi's Jawaharlal Nehru University.Drawing on extensive data concerning the laboring conditions of women workers and peasant women, this ambitious book provides a theoretical interpretation of the rapidly changing economic conditions in the contemporary global economy and particularly in Asia, and their consequences for women. It is based on prolonged field research in India, Bangladesh, and Japan, combined with a broad comparative study of currents in international feminism.Peter Custers reasserts the relevance of Marxist concepts for understanding processes of socio-economic change in Asia and the world, but argues forcefully that these concepts need to be enlarged to include the perspective of feminist theoreticians. In the process, he assesses the theoretical relevance of several currents in international feminism, including ecofeminism, the German feminist school, and socialist feminism. With its strong theoretical framework, supported by massive amounts of evidence, this important book will interest all those involved in women's studies, social movements, economics, sociology, and social and economic theory.

Since anthropogenic factors are mainly to blame for the current trends in global warming, human intervention will be necessary to mitigate it. With 17 authoritative chapters, *Combating Climate Change: An Agricultural Perspective* outlines a framework for preparing agriculture for climate change, presenting the causes and consequences of climate change and possible remediation measures. With contributions from internationally recognized scientists, the chapters cover global food security, adaptation of agriculture to fulfill its greenhouse gas emissions mitigation potential, economic aspects of climate change, the soil organic carbon pool, the need for agroecological intelligence, and the development of nutrient-use-efficient crops. The text also addresses genetic mitigation of climate change effects through the development of climate-resilient crops and the use of genetic and genomic resources to develop highly productive crop cultivars, as well as the conservation of native agroecosystems. Expert contributors discuss the impacts of climate change on plant pathogens and plant disease as well as on insects and crop losses. They address abiotic stress resistance, conservation tillage as a mitigation strategy, and more. The final chapter demonstrates the practical use of the WorldClim and DIVA software for modeling current and future climates, using Timor Leste and India as examples. Covering a broad range of issues related to climate change and agriculture, this book brings together ideas for environmentally friendly technologies and opportunities to further increase and stabilize global agricultural productivity and ensure food security in face of mounting climate challenge.
