Cultural Sustainability and Regional Development

Joost Dessein,Elena Battaglini,Lummina

Horlings,2015-08-13 Meeting the aims of sustainability is becoming increasingly difficult; at the same time, the call for culture is becoming more powerful. This book explores the relationships between culture, sustainability and regional change through the concept of 'territorialisation'. This new concept describes the dynamics and processes in the context of regional development, driven by collective human agency that stretches beyond localities and marked-off regional boundaries. This book launches the concept of 'territorialisation' by exploring how the natural environment and culture are constitutive of each other. This concept allows us to study the characterisation of the natural assets of a place, the means by which the natural environment and culture interact, and how communities assign meaning to local assets, add functions and ascribe rules of how to use space. By highlighting the time-space dimension in the use and consumption of resources, territorialisation helps to frame the concept and grasp the meaning of sustainable regional development. Drawing on an international range of case studies, the book addresses both conceptual issues and practical applications of 'territorialisation' in a range of contexts, forms, and scales. The book will be of great interest to researchers and postgraduates in sustainable development, environmental studies, and regional development and planning.

Swarm Planning Rob Roggema,2013-09-11 This book shows that the problem of climate adaptation, which is described in social planning terms as 'wicked,' is at odds with the contemporary practice of spatial planning. The author proposes a new adjusted framework which is more adaptable to unpredictable, wicked, dynamic and non-linear processes. The inspiration for this new method is the behaviour of swarms: bees, ants, birds and fish are capable of self-organization, which enables the system to become less vulnerable to sudden environmental changes. The framework proposed in Swarm Planning consists of these four elements: Two levels of complexity, the first being the whole system and the second its individual components. Each of these has different attributes for adapting to change. Five layers, consisting of networks, focal points, unplanned space, natural resources and emerging occupation patterns. Each layer has its own spatial dynamic, and each is connected to a spatial scale. Non-linear processes, which emerge in different parts of the framework and include emerging patterns, connectedness and tipping points among others. Two planning processes; the first, 'from small to large' works upward from the slowest changing elements to more rapidly-changing ones. The second, 'on the list of partners' addresses each layer from networks through emerging occupation patterns. Swarm Planning applies this framework to a series of pilot studies, and appraises its performance using criteria for an

adaptive landscape. The results show that the use of the Swarm Planning Framework reduces the vulnerability of landscapes as well as the impact of climate hazards and disasters, improves response to unexpected hazards and contains adaptation strategies. "This book is a must for planners in government and the private sector as it outlines the concept, strategies and techniques for swarm planning. It is also an important guide for policymakers looking to engage communities in a dialogue about the adaptation planning process." Professor John Martin, La Trobe University "The ultimate value of the book lies in encouraging the planning community to consider options that go far beyond those offered by business-as-usual planning methodologies developed for a set of operating conditions that are fast becoming obsolete. As such it makes an important and much needed contribution to the field." Assistant Professor Dr. Chrisna du Plessis, University of Pretoria

Low Car(bon) Communities Nicole Foletta, Jason Henderson, 2016-02-22 With increasing awareness of the urgent need to respond to global warming by reducing carbon emissions and recognition of the social benefits of car-free and car-lite living, more and more city planners, advocates, and everyday urban dwellers are demanding new ways of building cities. In *Low Car(bon) Communities*, authors Nicole Foletta and Jason Henderson examine seven case studies in Europe and the United States that aim explicitly to reduce dependency on cars. Innovative and inspirational, these communities provide a rich array of data and metrics for comparison and analysis. This book considers these low car(bon) communities' potential for transferability to cities around the world, including North America. Aimed at practicing city planners, sustainable transportation advocates, and students in planning,

geography, and environmental studies, this book will be an invaluable benchmark for gauging the success of sustainable urban futures.

Sensing and Monitoring Technologies for Mines and Hazardous Areas Swadesh Chaulya,G. M. Prasad,2016-06-10 Sensing and Monitoring Technologies for Mines and Hazardous Areas: Monitoring and Prediction Technologies presents the fundamentals of mining related geotechnical risk and how the latest advances in sensing and data communication can be used both to prevent accidents and provide early warnings. Opencast mining operations involve huge quantities of overburden removal, dumping, and backfilling in excavated areas. Substantial increases in the rate of accumulation of waste dumps in recent years has resulted in greater height of dumps and also has given rise to the danger of dump failures as steeper open pit slopes are prone to failure. These failures lead to loss of valuable human lives and damage to mining machinery. This book presents the most recent advances in gas sensors, methane detectors, and power cut-off systems. It also introduces monitoring of the gas strata and environment, and an overview of the use of Internet of Things and cloud computing for mining sensing and surveillance purposes. Targeted at geotechnical and mining engineers, this volume covers the latest findings and technology to prevent mining accidents and mitigate the inherent risk of the activity.

Presents complete details of a real-time slope stability monitoring system using wireless sensor networking and prediction technique based on multivariate statistical analysis of various parameters and analytical hierarchy process methods Discusses innovative ideas and new concepts of sensing technologies, mine transport surveillance, digital mining, and cloud computing to improve safety and productivity in mining industry Includes slope stability prediction software, downloadable through a companion website, which can be used for monitoring, analyzing, and storing different sensors and providing audio-visual, SMS, and email alerts Covers the latest findings and technology to prevent mining accidents and mitigate the inherent risk

Offshore Technology in Civil Engineering J. S.

Templeton,2006-01-01 This book contains nine classic papers from the Offshore Technology Conference (OTC), which is the world's leading event for the development of offshore resources in the fields of drilling, exploration, production, and environmental protection. These papers provide innovation in, vision for, and lasting impact on design, construction or installation of offshore infrastructure, and have influence far beyond the offshore industry, some becoming integral to the design process of onshore structures such as buildings and bridges. The ASCE

OTC Committee have chosen these classic documents to represent the outstanding papers from the early years of the OTC that withstand test of time. They contain engineering methods that have proven their value through widespread use, permeating codes, standards, guidelines and engineering software. Topics include: wave force evaluation; ultimate strength and reverse capacity; tubular joint material and design; pile foundations; and pipeline installation.

Flood Resistant Design and Construction, 2015

Modeling, Design, and Optimization of Net-Zero Energy Buildings Andreas Athienitis, William O'Brien, 2015-01-26 Building energy design is currently going through a period of major changes. One key factor of this is the adoption of net-zero energy as a long term goal for new buildings in most developed countries. To achieve this goal a lot of research is needed to accumulate knowledge and to utilize it in practical applications. In this book, accomplished international experts present advanced modeling techniques as well as in-depth case studies in order to aid designers in optimally using simulation tools for net-zero energy building design. The strategies and technologies discussed in this book are, however, also

applicable for the design of energy-plus buildings. This book was facilitated by International Energy Agency's Solar Heating and Cooling (SHC) Programs and the Energy in Buildings and Communities (EBC) Programs through the joint SHC Task 40/EBC Annex 52: Towards Net Zero Energy Solar Buildings R&D collaboration. After presenting the fundamental concepts, design strategies, and technologies required to achieve net-zero energy in buildings, the book discusses different design processes and tools to support the design of net-zero energy buildings (NZEBS). A substantial chapter reports on four diverse NZEBs that have been operating for at least two years. These case studies are extremely high quality because they all have high resolution measured data and the authors were intimately involved in all of them from conception to operating. By comparing the projections made using the respective design tools with the actual performance data, successful (and unsuccessful) design techniques and processes, design and simulation tools, and technologies are identified. Written by both academics and practitioners (building designers) and by North Americans as well as Europeans, this book provides a very broad perspective. It includes a detailed description of design processes and a list of appropriate tools for each design phase, plus methods for parametric analysis and mathematical optimization. It is a guideline for building designers that draws from both the profound theoretical background and the vast practical experience of the authors.

Underground. The Way to the Future Georg Anagnostou, Heinz Ehrbar, 2013-05-20 Underground the way to the future was the motto of the World Tunnel Congress 2013 in Geneva, Switzerland. The use of underground space has gained importance during the last years due to the tremendous global urbanization, the high demand on

transportation capacities and energy production. All this result in a wider range of use of underground spa

Sustainability of Concrete Pierre-Claude Aïtcin, Sidney Mindess, 2011-02-18 Production of Portland cement is responsible for about seven percent of the world's greenhouse gas emissions. The pressure to make the production of concrete more sustainable, or greener, is considerable and increasing. This requires a wholesale shift in processes, materials and methods in the concrete industry. Pure Portland cement will need to be replaced by more complex binary, tertiary or even quaternary binders, including other types of cementitious materials. We can expect an increasing use of high performance concrete, primarily because of its high sustainability and durability. Much more attention will have to be paid to the proper curing of the concrete if we want to improve its life expectancy. Presenting the latest advances in the science of concrete this book focuses particularly on sustainability, durability, and economy. It explores the potential for increased sustainability in concrete from the initial mixing right through to its behaviour in complex structures

exposed to different types of loads and aggressive environments.

Design of Latticed Steel Transmission Structures

American Society of Civil Engineers, 2015-03 Prepared by the Design of Steel Transmission Towers Standards Committee of the Codes and Standards Activities Division of the Structural Engineering Institute of ASCE This standard provides requirements for the design, fabrication, and testing of members and connections for latticed steel electrical transmission structures. Covering guyed and self-supporting structures, these requirements are applicable to hot-rolled and cold-formed steel shapes. The standard specifies the design criteria for structure components--members, connections, and guys--to resist design-factored loads at stresses approaching yielding, buckling, or fracture. This new edition, which replaces the previous Standard ASCE 10-97, presents minor changes to the design requirements and introduces new sections on redundant members, welded angles, anchor bolts with base plates on leveling nuts, and post angle member splices. Topics include: loading, geometry, and analysis; design of members, including compression members, tension members, and beams; design of connections, including fasteners, minimum distances, and attachment holes; detailing and fabrication; full-scale structure testing; structural members and connections used in foundations; and quality assurance and quality control. A detailed commentary contains explanatory and supplementary information to assist users of the standard. In addition, one appendix offers 17 design examples, and a new appendix offers guidance for evaluating older (legacy) electrical transmission towers. Standard ASCE/SEI 10-15 is a primary reference for structural engineers designing latticed steel electrical transmission structures, as well as for other

engineers, inspectors, and utility officials involved in the electric power transmission industry.
