Writing a Watertight Thesis Mike Bottery,Nigel Wright,2019-05-02 Writing a doctoral thesis can be an arduous and confusing process. This book provides a clear framework for developing a sound structure for your thesis, using a simple approach to make it watertight, defensible and clear. Bottery and Wright draw on their extensive experience of supervising and examining numerous doctorates from an internationally diverse and multicultural student body both in the UK and overseas, and include examples of how successful theses have been made watertight along with exercises to enable readers to do the same thing to their own thesis. The authors demonstrate how the key to making a thesis watertight lies in selecting the central research question and the sub-research questions that together collectively answer this main one. If these questions are well formulated the thesis can be defended successfully against criticism on structural grounds – a major part of the battle. Including chapters on the viva process, strength-testing your thesis and essential preparation for writing up your research, this is the resource for anyone looking to produce a well-structured, watertight piece of research.

EDiR - The Essential Guide Judith Babar,Oğuz Dicle,Hildo J. Lamb,Laura Oleaga,Fermín Sáez,2019-08-26 This EDiR guide has a practical rather than a theoretical focus, and is intended as a reference tool for potential EDiR candidates who would like to gain a better understanding of the EDiR examination. A pool of experts has made every possible effort to create a single source that contains everything needed to successfully pass the EDiR examination. Times have changed, and there is certainly a new generation of radiologists who will find this cutting-edge tool a “must-have” to familiarize themselves with the examination quickly and easily. The book is divided into the following main sections: one chapter for each subspecialty; one chapter on Safety, Management and Imaging Procedures; another on Principles of Imaging Techniques and Processing; and lastly, one on Management. This structure follows the same pattern as the EDiR examination, which is based on the European Training Curriculum (ETC) for Radiology released by the European Society of Radiology (ESR). Each subspecialty is covered using the same basic structure: Multiple Response Questions (MRQs), Short Cases (SCs) and CORE Cases from one of the most recent EDiR examinations. Students will thus be able to see all the questions from a recent examination and learn from the answers and comments provided by our pool of experts. Clinical cases as electronic supplementary material complete the book, and links to EDiR preparation sessions are also included,

allowing students to improve their knowledge of specific areas.

Performance Under Stress James L Szalma,Peter A A Hancock,2017-06-12 The world is a dangerous place and recent events have served to make it less safe. There are many arenas of conflict and even combat across the world. Such situations are the quintessential expression of stress; you stand in imminent danger and live with the knowledge that you may be attacked, injured or even killed at any moment. How do people perform under these conditions? How do they keep a heightened level of vigilance when nothing may happen in their immediate location for weeks or even months? What happens when the bullets actually start flying? How is it you distinguish friend from foe, and each from innocent bystanders when in immediate peril of your life? Can we design

technology to help people make good decisions in these ultimately hazardous situations? To what degree does your membership in a team act to dissipate these particular effects? Can we generate sufficiently stressful field exercises to simulate these conditions and can we train and/or select those most able to withstand such adverse conditions? How will the next generation of servicemen deal with these inherent problems? These are the sorts of questions that Performance Under Stress addresses. This book is derived largely from a multiple-year, multiple university initiative (MURI) on stress and soldier performance on the modern, electronic battlefield. It involved leading researchers from many institutions who have brought their individual expertise to bear on these crucial, contemporary concerns. United by a common research framework, these groups attacked the issue from different methodological and conceptual approaches, ranging from traditional laboratory modeling and experimentation, to realistic simulations; from involved field exercises to personal experiences of actual combat conditions. The insights generated have been distilled and presented as a benchmark of current understanding and provide future directions for research in this arena. Although this work focuses on soldier stress and soldier performance, the principles that are derived extend well beyond this single application. Their findings can be applied to people facing the demands of the business world or research as much as to those who meet life or death situations, such as homeland security, first responders, and law enforcement personnel.
