The Smarter Screen Shlomo Benartzi,2015-10-06 A leading behavioral economist reveals the tools that will improve our decision making on screens Office workers spend the majority of their waking hours staring at screens. Unfortunately, few of us are aware of the visual biases and behavioral patterns that influence our thinking when we're on our laptops, iPads, smartphones, or smartwatches. The sheer volume of information and choices available online, combined with the ease of tapping buy, often make for poor decision making on screens. In The Smarter Screen, behavioral economist Shlomo Benartzi reveals a tool kit of interventions for the digital age. Using engaging reader exercises and provocative case studies, Benartzi shows how digital designs can influence our decision making on screens in all sorts of surprising ways. For example: • You're more likely to add bacon to your pizza if you order online. • If you read this book on a screen, you're less likely to remember its content. • You might buy an item just because it's located in a screen hot spot, even if better options are available. • If you shop using a touch screen, you'll probably overvalue the product you're considering. • You're more likely to remember a factoid like this one if it's displayed in an ugly, difficult-to-read font. Drawing on the latest research on digital nudging, Benartzi reveals how we can create an online world that helps us think better, not worse.

  What Matters for Health and Happiness Among the Older Adults in Asia Nai Peng Tey,Halimah Awang,Shekhar Chauhan,2024-03-11 People want to live a healthy and happy later life. A large body of literature shows the close association between health status and happiness and between health and active engagement (in work, exercise, and social and religious activities). However, the causation between the two can run both ways, and it is difficult to determine the causal effect with cross-sectional data. Various authors have shown the significant influence of socioeconomic factors and human needs on older people's health status and happiness. A better understanding of the factors affecting healthy and happy aging is essential for policymaking to improve the well-being of older people. The availability of data from HRS-family studies in several Asian countries (CHARLS in China, LASI in India, JSTAR in Japan, KLoSA in Korea, IFLS in Indonesia, HART in Thailand, MARS in Malaysia, and Longitudinal Study of Ageing and Health in Viet Nam) (see Gateway to Global Aging Data) provides an excellent opportunity for researchers to examine factors affecting health and happiness among older adults within and across Asian countries. This research topic aims to gather papers that investigate the socioeconomic, attitudinal, and behavioural factors affecting the health status and happiness/life satisfaction of older adults in Asia. The dependent variables may include physical health, mental health, disability (ADL/IADL), cognitive functioning), self-rated health, health expenditure, feeling of happiness and life satisfaction. The independent variables may be age, gender, marital status, place of residence, educational level, active engagement (work, exercise, social and religious activities), family and social relationship and support, outlook in life, smoking, drinking, and access to and utilization of healthcare services, etc.

Manuscripts can be based on individual countries or cross-country analysis, preferably using the panel data to establish the causal effects of the independent variables on the dependent variables.

Smart Net Steven H. Kim,2002 Advances in digital technology have swept away worn assumptions concerning information access, knowledge capture, and business practice. The new order has been proclaimed a second industrial revolution. Amidst the ferment, a steady stream of publications has reported on computer systems, network standards, and online tactics. Despite the wealth of information—or perhaps because of it—there has been a dearth of frameworks to organize the myriad tools, applications, and strategies. This book presents a panoramic view, filters the melody from the noise, and offers pointers toward the future. The primer begins with an overview of key techniques and applications. This is followed by guideposts to orient the newcomer to the virtual frontier. For members of the digital economy, the book offers global models to assess the environment, devise a competitive strategy, and construct an enterprise system. The volume provides a compact survey of Internet technologies and their role in personal productivity as well as corporate advantage. The manual can serve as a guide to emerging trends for the general reader, or as an aid to strategic planning for the decision maker. The handbook should interest readers in all walks of life and roles at work, from front-line employees and seasoned professionals to senior executives and policy makers. The book is also addressed to students of all ages with an interest in the evolution of our digital society.

Drawing on research and interviews with educators, psychologists, and kids themselves, Raising a Screen-Smart Kid offers practical advice on how parents can help their kids avoid the pitfalls and reap the benefits of the digital age by: using social media to enhance connection with friends and family, instead of following strangers and celebrities, which is a predictor of loneliness and depression finding online support and community for conditions such as depression and eating disorders, while avoiding potential triggers such as #Thinspiration Pinterest boards learning and developing life skills through technology--for example, by problem-solving in online games--while avoiding inappropriate content Written by a public health expert and the creator of the popular blog Rants from Mommyland, this book shows parents how to help their kids navigate friendships, bullying, dating, self-esteem, and more online.
