The New York Regional Mormon Singles Halloween Dance Elna Baker, 2009-10-15 A wickedly funny debut. Baker is both self-absorbed and generous, whip-smart and naïve; she apologizes for none of it.—People It's lonely being a Mormon in New York City. Every year, Elna Baker attends the New York Regional Mormon Singles Halloween Dance. This year, her Queen Bee costume (which involves a funnel stinger stuck to her butt) isn't attracting the attention she'd anticipated. So once again, Elna finds herself alone, standing at the punch bowl, stocking up on Oreos, a virgin in a room full of thirty-year-old virgins doing the Funky Chicken. But loneliness is nothing compared to what Elna feels when she loses eighty pounds, finds herself suddenly beautiful... and in love with an atheist. Brazenly honest, *The New York Regional Mormon Singles Halloween Dance* is Elna Baker's hilarious and heartfelt chronicle of her attempt to find love in a city full of strangers and see if she can steer clear of temptation and just get by on God.

Pattern Recognition and Machine Learning Christopher M. Bishop,2016-08-23 This is the first textbook on pattern recognition to present the Bayesian viewpoint. The book presents approximate inference algorithms that permit fast approximate answers in situations where exact answers are not feasible. It uses graphical models to describe probability distributions when no other books apply graphical models to machine learning. No previous knowledge of pattern recognition or machine learning concepts is assumed. Familiarity with multivariate calculus and basic linear algebra is required, and some experience in the use of probabilities would be helpful though not essential as the book includes a self-contained introduction to basic probability theory.

The New Net Zero Bill Maclay, 2014 The new threshold for green building is not just low energy, it's net-zero energy. In *The New Net Zero*, sustainable architect Bill Maclay charts the path for designers and builders interested in exploring green design's new-frontier net-zero-energy structures that produce as much energy as they consume and are carbon neutral. In a nation where traditional buildings use roughly 40 percent of the total fossil energy, the interest in net-zero building is growing enormously--among both designers interested in addressing climate change and consumers interested in energy efficiency and long-term savings. Maclay, an award-winning net-zero designer whose buildings have achieved high-performance goals at affordable costs, makes the case for a net-zero future; explains net-zero building metrics, integrated design practices, and renewable energy options; and shares his lessons learned on net-zero teambuilding. Designers and builders will find a wealth of state-of-the-art information on such considerations as air, water, and vapor barriers; embodied energy; residential and commercial net-zero standards; monitoring and commissioning; insulation options; costs; and more. The comprehensive overview is accompanied by several case studies, which include institutional buildings, commercial projects, and residences. Both new-building and renovation projects are covered in detail. *The New Net Zero* is geared toward professionals exploring net-zero design, but also suitable for nonprofessionals seeking ideas and strategies on net-zero options that are beautiful and renewably powered.
